CHAPTER 1

PUBLIC ADMINISTRATION IN THE GRIP OF THEORIES AND CULTURAL VALUES

Ömer ÇAMUR[1]

1 Assist. Prof. Dr., Bingol University, Vocational School of Health Services, Department of Management and Organization, Orcid Id: 0000-0001-6447-1475, omercamur44@gmail.com

1. INTRODUCTION

Theories are information put forward as a result of observing and explaining any phenomenon. Theories, which are important in terms of understanding and interpreting the world we live in, are common both in social life and in social institutions created by the society. This is also true for public administration. Public administration is a structure created to meet the common needs of the society as the executive tool of the state. There are many theories that have emerged in the historical process in order for the public administration to realize what is expected from it. Theories are commonly used in areas such as making sense of the public administration, interpreting it, improving the service production processes, providing the services needed by the citizens in an effective and efficient manner, and demonstrating a successful administration.

Theories are very important and effective in public administration's providing service successfully. However, some problems may occur in successful implementation of theories in public administration. Most important of these problems are that public administration theories are not created for every country and that theory applications are applied by different countries in the form of policy transfer. This situation is one of the leading factors that prevent public administration theories from being successful in country practices. This is because the structure and culture of each society is different from each other.

Culture refers to all the material and spiritual values that individuals, who are social beings and therefore have to live together, have created in the historical process. Culture encompasses the shared, learned behaviours and beliefs that are passed down from generation to generation. Culture, which forms the system of social relations, is the main activity area required for the survival of human societies. Cultural values that shape life are effective in every area where the individual is present. This is also true for public administration, which operates to meet social needs. In the light of this information, this study will first explain what public administration theories and cultural values mean. The rest of the study will provide suggestions on how to solve the problems experienced by public administration, which is between theories and cultural values.

2. PUBLIC ADMINISTRATION AND THEORIES OF PUBLIC ADMINISTRATION

Theories are analytical tools through which people make sense of their experiences with the world and which are used to understand a particular subject, explain it in detail, reveal the different dimensions of the subject, and make predictions in terms of its relation to other fields. Theories, which encompass all of the thoughts and views about a subject, express

INTRODUCTION

Today, encouraging social marketing campaigns and communication elements are frequently used in the public sector to improve public health. These campaigns consist of programs designed to encourage individually beneficial behavior change with a focus on social benefit (Grier and Bryant, 2005: 319). Most of the social marketing campaigns implemented in Turkey, especially in the last decade, have health content. This shows that social marketing has a significant potential in solving health problems. Although social marketing practices in Turkey have a recent past, they have been used in the world to correct many health problems (insufficient physical activity, high-fat, low-vegetable diet) before the 2000s (Coreil, 2009: 329). Publicly controlled social marketing professionals deliver health communication messages aimed at behavior change on national television channels (as a public service announcement), billboards, and posters in schools and hospitals. In social marketing, as in traditional marketing, it is to offer value to the target audience by showing the positive aspects of being healthy and adopting the targeted behavior with the campaigns (Evans, 2008: 182). The state prefers to reduce public health expenditures by promoting healthy life, rather than undertaking financial obligations to cure diseases, which are the outputs of unhealthy life (Cugelman et al., 2011: 2). Ornish (2008) stated that with the disease prevention program he implemented, health insurance expenses decreased by 50% in the first year and by 20-30% in the following period.

Although social marketing is based on commercial marketing as stated above, four basic features are effective in the success of the application (Gordon et al., 2006: 1134). The first is observing voluntary behavior change after the campaign. Because sustainable behaviors can be gained voluntarily. The second feature is that behavior change provides a significant benefit to the individual (French and Gordon, 2015: 28). The benefit that an individual will get in return for quitting his or her habitual behavior can affect the level of motivation. While the first two features are individual-based success criteria, the last two features are related to the institutions or organizations that make the campaign. While managing the campaign, the relevant institution should first research the market potential, segment the market in line with the data obtained as a result of the research, and then select the department that will respond the fastest to the change in behavior and develop an appropriate marketing mix strategy. The last feature is that social benefit is more important than corporate benefit in social marketing.

In many countries of the world that care about the improvement of public health, social marketing campaigns in various categories have been organized and the effectiveness of these campaigns has been researched

CHAPTER 3

THE EFFECTS OF INFORMATION COMMUNICATION TECHNOLOGIES ON THE DEVELOPMENT OF INTERNATIONAL TRANSPORT TYPES

Ramazan YILDIZ[1]

1 Öğr. Gör. Dr. Ramazan Yıldız, Çanakkale Onsekiz Mart University, Yenice Vocational School, Department of Management and Organization, e-mail: ramazanyildizahmet@gmail.com, ORCID ID: 0000-0001-8437-8171

1. INTRODUCTION

Information and communication technologies have important contributions to the development of countries. ICT has started to play a more important role especially in production after 1980s. ICT is not only used for personal needs, but also makes important contributions to the economic development of countries. Thanks to ICT, information and documents can be easily shared within and between countries. The fact that information can be shared easily and instantaneously means that information can be disseminated more quickly. Thanks to the information, people can demand the products they need from anywhere they want. On the other hand, when it is considered from the perspective of the manufacturer, it can determine where in the world they can produce and sell which products, how much and at what price. Thus, human needs can be identified and met easily and quickly (Saidi, Toumi and Zaidi: 2017).

The digital and information age is changing the way people learn, communicate, do business and treat diseases. ICT provides great opportunities for the economic growth of countries, providing better quality services, creating better health services, learning with distance education methods, and progress in social and cultural areas. Although many countries have data for ICT use; school, business, research, government, etc. Little is known about how and by whom they are used in the fields. More comparative statistical analyzes are needed to determine the growth of the ICT sector and its benefits on production and development. Thanks to ICT, countries can establish global partnerships, harmonize information and data exchanges, and build their statistical capacity (Word data bank, 2023).

Logistics is the element that brings together the demands of the people that emerged thanks to ICT and the supplies of the producers. Many types of transportation such as road, air, rail, sea and pipeline transportation are used in logistics activities. While one of these types of transportation can be used to deliver the products to the places where they are needed, two or more types of transportation can also be used together. There are intermodal, multimodal and combined transportation types among the two or more used transportation types. With the healthy operation of logistics activities, the desired product can be delivered on time, to the desired location, at the desired price and quality (Yıldız, 2022).

There are many prominent domestic and foreign studies on ICT and logistics applications. Karlı and Tanyaş (2020) worked on the integration of ICT supported activities and logistics centers. In the study, they mention that ICT is needed in order to improve logistics centers, increase their efficiency and make full integration. Çeviker, Mutlu, and Sesliokuyucu

CHAPTER 4

INDUSTRIAL REVOLUTION AND ASSESSMENTS ON TURKEY

Hazal Koray ALAY[1]

1 Assist. Prof. Dr., Batman University, Health Services Vocational School, Department of Management and Organization, Manegement of Health Institutions Program, Batman/Turkey, hazalkoraygenc@gmail.com, ORCID: : 0000-0002-6638-3089

INTRODUCTION

Industrial history examines developments in industrial production, processing and distribution technologies that began with the industrial revolution. The industrial revolution began in England at the end of the 18th century, and human and animal power gave way to innovations such as steam engines, weaving machines, the railway and the telegraph. In this period, production and trade increased rapidly and this situation laid the foundations of modern industrial society.

The industrial revolution is a global-scale development and has affected all the countries of the world. The industrial revolution in Turkey started in the last years of the Ottoman Empire and gained momentum in the Republican period. Turkey started to implement economic development and industrialization strategies, especially after the 1950s, and the industrial sector greatly expanded in this period. Turkey has an important industrial capacity, especially in sectors such as textile, food, chemistry, automotive and defense industries. In recent years, the technology sector in Turkey has been growing rapidly and world-renowned technology companies are investing in Turkey. However, the existence of some problems related to Turkey's economic stability affects the industrial development of the country (Sarı et al., 2020).

As a result, industrial history laid the foundations of the modern world and still plays an important role today. Although Turkey has faced many difficulties in the industrialization process, it has an important industrial capacity and this contributes to the economic development of the country. In this section, the historical development of the industrial revolution will be scrutinized, especially Industry 4.0 will be detailed and evaluations will be made on Turkey.

1. Historical Development of the Industrial Revolution

In the classification of industrial revolutions, which energy source was used in which period was decisive. When evaluated within this framework, it is known that coal and wood were used in the first industrial revolution, electricity and oil were used in the second industrial revolution, and nuclear energy was used in the third industrial revolution. Figure 1 explain informations about industrial revolutions.

1. Introduction

Europeanness identity, the idea of "identity", which forms the foundation for the concept of citizenship, has also been subjected to many debates. The same debate has been made on the Europeanness identity and EU citizenship. Considering the treaties and agreements, youth, and education programs, even the production of common symbols and the effort to establish a media, it is understood that an attempt is being made to create a "Europeanness identity" within the EU. Nowadays, it is seen that there are multiple identities, such as multiple citizenships. In other words, multiple identities can be owned and used simultaneously under the circumstances. However, another polemic is focused on which of the national identities and the upper identity of Europeanness is the priority (Çilingir, 2007, pp.44-52). According to Diez, although there is a "Europe", many are European. Emphasizing Benedict Enderson's Imaginary Communities, Diez forms the basis of today's debates on Europeanness and identity, the question of a nation, that is, nation or Europe (Diez, 2004, p.494).

Contrary to the geopolitical conditions in the 1950s. On the one hand, the EU identity is based on the Union's ideas. On the other hand, the national identity understanding, which highlights the national identities of the nation, greatly impacted the conditions that led to the emergence of concepts such as Europe and Europeanness, as Smith speaks of (Smith, 1992, p.60).

The EU's effort to create a unique identity for political integration is mainly due to the problem of legitimacy. In this sense, it can be said that the Europeanness identity is a framework to be established for the Union to take a more democratic and legitimate base. In addition, it would be a good point and appropriate to add the decisions regarding the Union and citizenship included in the founding treaties since the Maastricht Treaty (1992) was concluded. The efforts to support the democratization of the developing candidate countries since the 1980s (Kaya, 2017, p.27). Continental Europe had been defined for many years by its history, geography, and various cultural characteristics. The identity of Europeanness had represented modernization before the EU was established. After the 1950s, it was reshaped and further strengthened by the integration process within the EU II. However, after the second World war, the idea of the EU, a civilization and culture project based on the rule of law and humanism, was seen by many as a myth. However, with the treaties concluded between various European states, this project turned into an international and intercultural integration study in which shared values were formed and shaped (Mayer and Palmovski, 2004, p.575).

CHAPTER 6

DIGITAL ACTIVISM AND HASHTAG FEMINISM

Berna GÖRGÜLÜ[1]

Naim ÇINAR[2]

1 PhD Fellow, Pittsburgh University, Department of Communication and Rhetoric, beg88@pitt.edu, https://orcid.org/0000-0002-0988-9999

2 Assistant Prof. Dr., Anadolu University Faculty of Communication Sciences, Department of Advertising and Public Relations, naimcinar@anadolu.edu.tr, https://orcid.org/0000-0002-1824-4076

Pointing out a solid and tangible acquisition of 'one' online movement in offline life, "Most say that, compared with five years ago, those who commit sexual harassment or assault at work are more likely to be held responsible and those who report it are more likely to be believed," says Anna Brown (2022) from Pew Research Center, referring the recently conducted research about Americans' thoughts regarding the #MeToo movement, which is almost a symbol of all feminist hashtag movements. With the rise of digital technologies and social media platforms, feminists have increasingly utilized these tools to connect, communicate, and mobilize against prevalent issues such as sexism, misogyny, and rape culture. Consequently, scholars have taken notice of the emergence and impact of digital feminist movements. In fact, it has taken a decisive and/or worthy to discuss the position in the midst of scholarly debates such as whether we have come to fourth-wave feminism or not and how we should name this shift in feminism. The movements such as #MeToo, #BeenRapedNeverReported, and The Everyday Sexism Project have become symbols and indicators of digital feminist activism for scholars in terms of their massiveness, widespread reach, transnational appeal, and their controversial features within feminism. With the effect of these features, the Journal of Feminist Family Therapy and the Women's Studies in Communication had their special issues on #MeToo in 2019, and the Review of Communication published a Themed Issue: Transnational Dimensions in Digital Activism and Protest dominantly composed of #MeToo studies.

In this chapter, we aim to portray the conversation around the #MeToo movement, in the scope of the Communication field. We can learn a lot about the possibilities for researching digital feminisms by taking up #MeToo as a case study because #MeToo exhibits a fair range of current approaches to exploring digital feminism. While researching this conversation allows us to make observations specific to both feminist discourse and context, and the characteristics of the #MeToo movement itself, recognizing that #MeToo is one of the many movements in feminism, which again we can count as one of the many democratic struggles that have found new life and new tactics through digital and social media, it has some common traits with other movements carried out in the digital environment. Hence, in this chapter, we argue that the impact of digital technologies on feminist activism should not be considered in isolation from both digital activism and the wider digital media ecology. Therefore, this chapter touches on some features that digital feminist activism and digital activism more broadly share due to the use of the same medium, however, the scope of the conversation examined here is limited to the #MeToo movement, rather than focusing specifically on any other online activism cases.

CHAPTER 7

ECONOMIC AND FINANCIAL PERFORMANCE OF THE BALKANS: İNTEGRATED BWM-BASED CoCoSo METHOD

Naci YILMAZ[1]

1 Assoc. Prof., Doğuş Üniversitesi, İİBF, Department of Economics, nyilmaz@dogus.edu.tr , ORCID No: 0000-0003-0107-6448

Introduction

The Balkans or Balkan Peninsula is a geographical and cultural region located in the southeastern part of the European continent, east of the Italian Peninsula, west and northwest of Anatolia. Another term used for it is the Southeast Europe. The Balkans is a peninsula surrounded by the Adriatic Sea and the Ionian Sea in the southwest; the Mediterranean Sea in the south; the Aegean Sea and the Sea of Marmara in the southeast; and the Black Sea in the east. Despite the current consensus on the eastern, southern and western borders of the Balkans, or the Balkan Peninsula by geographical name, the northern borders are disputed. Some geographers consider the northern border to be the Danube and Drava rivers, others consider the border to the east of the Carpathian Mountains. The borders of the region from the northwest (the Gulf of Trieste) to the south and east are surrounded by seas: the Adriatic, the Ionian Sea, the Mediterranean Sea, the Aegean Sea, the Dardanelles, the Marmara, the Bosphorus, the Black Sea. The northwestern border, which continues from the Krka River in the village of Čatež ob Savi, runs west of the river's mouth, Gradiček, over the Vipava River, and crosses into Italy. The border, which joins the River Soča near Gorizia, connects to the Adriatic near Monfalcone on the shores of the Gulf of Trieste. The total area of the Balkans is 504,884 km² (tr.wikipedia.org, 2023).

Most of the countries in the region were not yet national and independent, as they were ruled under the Ottoman Empire for about 4 centuries until World War I. Later, with the exception of Greece and Turkey, a significant part of the region was included in the group of "Second World" countries, also called the "socialist bloc" after World War II. Today, there are 13 independent countries in this region. These countries are Albania, Bosnia and Herzegovina, Bulgaria, Croatia, Greece, Kosovo, Montenegro, North Macedonia, Hungary, Romania, Serbia, Slovenia and Turkey. While the entire territory of seven of these countries is located within the region, only a certain part of the territory of the others is located in the region. The countries whose complete territory is located in the Balkans are Bulgaria, Greece, Montenegro, Bosnia and Herzegovina, Kosovo, Albania and North Macedonia. The countries whose small territory is a part of the Balkans are Croatia, Hungary, Slovenia, Serbia and Turkey. Of these countries, the exception of Greece and Turkey, were the countries that had not yet switched to a market economy before 1989 and had a socialist economic system based on central planning. With the dissolution of the Soviet Union in the late eighties and the acceleration of economic globalization, these countries that abandoned the socialist economic system were called "transition economies". The aim of these countries was to be able to move from central planning and a socialist economic system to a capitalist economic system and a free market

CHAPTER 8

AN APPLICATION FOR AGGREGATING THE CRITERIA WEIGHTS OBTAINED BY DIFFERENT OBJECTIVE WEIGHTING METHODS AND THEIR USE IN COPRAS

Mehmet Hakan ÖZDEMİR[1]

1 Dr. Öğr. Üyesi, Türk-Alman Üniversitesi İktisadi ve İdari Bilimler Fakültesi İşletme Bölümü Sayısal Yöntemler Anabilim Dalı

1. Introduction

Multi-criteria decision making (MCDM) refers to a group of techniques for assessing a set of alternatives in light of several, usually conflicting criteria. Thus, given a set of alternatives (options) and a number of decision criteria, the purpose of MCDM is to provide a choice, ranking, description, classification, sorting, and, in most instances, an order of alternatives, from the most preferred to the least favored option. (Mulliner et al., 2016). Assigning weights to criteria is a crucial step that needs to be reconsidered in the majority of MCDM models. However, one of the main issues with MCDM is figuring out how to weight the various criteria (Pamučar et al. 2018; Vinogradova et al., 2018). The assessment of the criteria weights can be subjective, objective or hybrid (Ginevičius and Podvezko, 2005). The subjective methods calculate weights in accordance with the preferences of decision makers for the criteria. The opinion or intuition of the decision maker is reflected in weights created using subjective methods. Due to lack of information or experience, the decision maker may impact the findings of analyses or the rankings of alternatives based on weights (Ma et al., 1999). Furthermore, determining the subjective weights for the criteria takes a lot of time, particularly when there is disagreement among the decision makers regarding the issue at hand (Odu, 2019). On the contrary, the objective methods calculate weights on the basis of objective data (e.g. decision matrix). However, by using mathematical models to generate weights, objective methods frequently ignore the decision maker's subjective judgment (Ma et al., 1999). The question of how completely and objectively the small sample of alternative traits conveys the value of the criteria is also left unanswered for these methodologies. Obviously, the decision matrix entirely determines the outcome (Mukhametzyanov, 2021). In hybrid methods, subjective and objective weighting methods are combined. The decision matrix data and the preferences of the decision makers can both be used in the hybrid methods (Keshavarz-Ghorabaee et al., 2021).

Since only objective weighting methods will be used in this study, a few studies in the literature using objective weighting methods will be discussed below.

Using the weights obtained by the CRITIC (CRiteria Importance Through Intercriteria Correlation), equal weights (mean weight), and standard deviation methods, Diakoulaki et al. (1995) evaluated firms with regard to three ratios indicating the profitability, the market position, and the labor productivity in their study where they introduced the CRITIC method.

Zavadskas and Podvezko (2016) aggregated the entropy method and the CILOS (Criterion Impact LOSs) method to create a new method called

CHAPTER 9

DOLLARIZATION IN TURKEY

Can MAVRUK[1]

1 Lecturer Dr. Niğde Ömer Halisdemir University, Niğde Vocational School of Social Sciences, Department of Marketing and Advertising, Niğde, Turkey. can.mavruk@ohu.edu.tr. ORCID: 0000-0002-4084-7447

INTRODUCTION

Dollarization is primarily due to a lack of confidence in monetary policy. The ineffective and unsuccessful policies of central banks cause high unpredictable rates of inflation. The most important policy tool of monetary policy that supports the preservation of the value of the domestic currency in cross transactions is interest. On the other hand, inflation is the most basic indicator of savings when real and legal persons create their portfolios and make investments. All rationally expect their assets to be appreciated above inflation and to generate real returns. In a fragile economy like Turkey with high exchange rate volatility, unstable monetary and fiscal policies, it has become inevitable for people to accumulate assets and enter into debt relations with a currency with a more predictable future and a stronger economy. Economists and financiers call this phenomenon "Dollarization".

In 1971, with the end of fixed exchange rate system, a new system was sought. In the 1980s, the liberal trend that spread to the world from the United States of America, globalization and liberalization of capital mobility caused an intensification of dollarization in developing countries such as Turkey, which made inflation an integral part of its economy. The return of domestic and foreign currency to savings and investment cost have been important factors in dollarization.

Previous studies attributed the reason for dollarization to domestic dynamics. The causes of dollarization were inflation and exchange rates (Saraç, 2010; Darıcı, 2004; Us & Metin-Özcan, 2005; Terzi and Kurt, 2007; Sarı, 2007; Hekim, 2008; Yalta & Yalta, 2021; Aktaş & Aydınlık, 2022). Other important determinants of dollarization were interest rates (Yalta & Yalta, 2021), domestic and foreign currency interest margins (Sarı, 2007), political events (Bărbuță-Mișu, Güleç, Duramaz and Virlanuta, 2020), import, export, CDS premiums (Aktaş & Aydınlık, 2022).

This study aims to examine short run and long run relationships between dollarization (FED/(M1+M2)), USD/TL exchange rates, inflation and USD interest rates in the period of aformentioned events. The research focuses on causal effects of these macroeconomic variables. Based on availability of monthly data, econometric analysis covers the 2013m1-2022m8 period. Dickey Fuller test for unit root and bound test (Pesaran, Shin and Smith, 2001) for cointegration are used. Stability of the coefficients in the models is tested using cumulative sum (CUSUM) squared of residuals.

1. BACKGROUND

Political developments in the last decade had tremendous impact on Turkish economy. Brunson crisis (2015-2018) and F35 bargain of Turkish

CHAPTER 10

TRANSFERABLE UTILITY GAMES AND THE EXISTENCE OF CORE ALLOCATIONS

Mehmet KARAKAYA[1]

1 Asst. Prof., Department of Economics, İzmir Kâtip Çelebi University, İzmir, Türkiye.

e-mail: mehmet.karakaya@ikcu.edu.tr, ORCID ID: 0000-0002-9495-2242.

1. Introduction

Cooperative games model and study the collaboration and cooperation of agents at which people form coalitions (Shapley 1953, Shapley 1969, Moulin 1988). A transferable utility version of a cooperative game consists of a finite set of agents and a value (characteristic) function which assigns a real number to every coalition. The real number assigned to a coalition by the value function is called the worth of the coalition, so the worth of a coalition (or what a coalition can achieve in a cooperative game) can be expressed by a single number. Given a transferable utility game, the main concerns are what coalitions will form and how the worth of a coalition will be distributed among the players of the coalition (Moulin 1988, Peters 2008) .

For a given transferable utility game it is assumed that the grand coalition (which contains the set of all agents) forms. The assumption that the grand coalition forms is plausible if it is considered that larger coalitions have bigger values. Then, the main concern is how the value of the grand coalition will be distributed to the set of all agents. A distribution of the value of grand coalition is called an allocation. We want that an allocation to be stable in the sense that no coalition of the player set blocks it. An allocation which is not blocked by any coalition is called a core allocation.

A transferable utility game may not have a core allocation. So, the conditions guaranteing the existence of core allocations have been studied in the literature. We focus on the existence of core allocations in this paper and revisit conditions (convexity and balancedness) that guarantee the existence of core allocations. Convexity is a sufficient but not a necessary condition. Balancedness is both a necessary and sufficient condition for the existence of a core allocation.

Shapley (1971) showed that if a transferable utility game is convex then it has non-empty core allocations. That is, convexity is a sufficient condition for a transferable utility game to have a core allocation. However, convexity is not a necessary condition, i.e., it is possible that a transferable utility game is a non-convex game and it has non-empty core allocations. A transferable utility game is convex if it satisfies that each player's marginal contributions to larger coalitions do not decrease.

Bondareva (1962) and Shapley (1967) showed that a transferable utility game has a non-empty core if and only if it is balanced, i.e., balancedness is a necessary and sufficient condition for the existence of a core allocation. So, the balancedness condition is weaker than convexity,

CHAPTER 11

AN ANALYSIS OF THE STRATEGIC RELATIONS BETWEEN RUSSIA AND CHINA FROM THE PERSPECTIVE OF INTERDEPENDENCE[1]

Eylül Beyza ATEŞ ÇİFTÇİ[2]

1 This study has been prepared on the basis of PhD thesis. Eylül Beyza Ateş Çiftçi, "Asya'daki Güç Mücadelesi Bağlamında Gelişen Rusya-Çin İlişkileri", Advisor Prof. Dr. M. Lutfullah Karaman, İstanbul 2022.

2 Dr., Orcid: 0000-0003-0655-6846, eylulbeyzates@gmail.com

Introduction

The fact that while obtaining their current strong positions in the international environment, the mutual relations of Russia and China, which were in a weaker position following the Cold War, became the strongest. This was analyzed based on the theory of interdependence by this study. In this article, it is argued that the two countries need to maintain cooperation in terms of satisfying their national and regional interests, and they enter a cycle of interdependence due to their inability to maintain the continuity of power in situations where they cannot show cooperation. In addition to the cooperation and strategic partnerships that emerged between the two countries, the fields of competition that developed during the process were also re-evaluated within the framework of the change in the level of interdependence between the parties. As the levels of interdependence in the aforementioned process are examined, it has been found that there is a shift from vulnerability to sensitivity and from symmetry to asymmetry between the two parties.

In the light of the analyzes performed, it has been concluded that the mutual relations and interactions of both countries, which started as a result of the search for a multipolar order in the international sense, still continue to the extent that they avoid serious competition in the current situation, and despite the changes in the level of interdependence, they will continue to develop their relations based on interdependence for their interests in the matters where they feel lack of power.

The fluctuating Russian-Chinese relations over the course of history entered a new period of relations after the collapse of the Soviet Union, which has also shaped the subject of this study. Russia-China relations have shown significant improvement in the post-Soviet period. Both sides expressed their dissatisfaction with the unipolar world order following the Cold War and placed the discourse of multipolar world ideologies in their political centers on the way to the steps taken for cooperation between Russia and China. In the new world order based on multipolarity, in which China and Russia want to be involved, the most important partners of these two countries are seen to be themselves. Both countries are quite uncomfortable with the current political conjuncture, and they want to consolidate their superpower positions through the power fields they are developing. It is so natural for these two actors acting in this way to show cooperation to enhance their mutual political interests. Considering the geographical proximity of Russia and China, the need for each other's resources and the possibility of rapid access to these resources provide abundant areas of cooperation between them. The biggest reasons why the two countries tend to cooperate with each other and develop their partnerships are to balance the influence of USA in the region and the global

CHAPTER 12

TALENT MANAGEMENT

Aylin AKYOL[1]

1 Aylin Akyol, Asst. Prof., Adıyaman University, Orcid: 0000-0003-2700-5111

INTRODUCTION

Most firms must learn to successfully compete in this complicated and dynamic environment created by the global economy in order to experience sustained growth (Anand, 2011: 25). Businesses must manage talent as a source of competitive advantage in today's complicated global economy (Wright & Kehoe, 2008). The primary factor influencing corporate performance is generally acknowledged to be organizational talent management (Meyers, 2020: 1). In recent years, there has been significant progress in the relevant literature focusing on talent management (Valverde, Scullion, & Ryan, 2013: 1832). Talent management is a limited research area that contributes to the current literature on the management of human resources. Talent management is becoming more and more crucial for corporate performance and individual talent development in order to maintain a competitive advantage (Kaliannan, Darmalinggam, Dorasamy, & Abraham, 2023:1). In recent years, theoretical and methodological studies have been conducted in order to conceptualize the scope of talent management (Makarem, Metcalfe, & Afiouni, 2019: 181).

The concept of talent expresses the whole of the skills, experience, knowledge, talents, intelligence, and competencies needed by the employees to resolve various situations and problems faced by the organization (Michaels, Handfield-Jones, & Axelrod, 2001; Ugboego, Edeh, Amarachi, Ikechukwu, & Adama, 2022: 29). The methodical explanation of base positions that contribute in different ways to the company's sustainable competitive advantage is part of the talent management process, as is the creation of a talent pool of high-potential and high-performing officers to fill positions. It has to do with enhancing a differentiated human resources architecture to make it easier to hire qualified candidates and ensure their dedication to the company (Collings & Melahi, 2009: 305). Talent management, decided at the top management level, is regarded as a priority for any firm since it promotes competitiveness, performance, effectiveness, and productivity (Bloom, Lemos, Sadun, Scur & Van Renen, 2014 as cited in Basco, Bassetti, Dal Maso, & Lattanzi 2021: 2).

Today's talent supply, composition, and movement in companies are shaped by a variety of complex and fluid dynamics and processes. Most businesses compete on a worldwide scale and grow operations across borders. It is referred to as a macro talent management system and is present in numerous external scenarios. Macro talent management can either directly or indirectly strengthen or weaken a company's ability to attract, hire, and retain talent which is essential to achieving competitive business goals. Economic, political, governmental, technological, and cultural factors all have an impact on macro talent management (King & Vaiman, 2019: 194). Macro talent management refers to activities

CHAPTER 13

SMART GASTRONOMY TOURISM APPLICATIONS

Mahmut BARAKAZI[1]

1 Asst. Prof., Department of Gastronomy and Culinary Arts, School of Tourism and Hotel Management, Harran University, Şanlıurfa, Türkiye

1. Introduction

As a result of the development of technology in all areas of human life, its increasing importance is increasing in all sectors, especially in the service sector. Individuals, who started to have more free time and labor rights after the industrial revolution, are also interested in technological opportunities that make their lives easier. Technological developments, which were used in mass production and defense industry in the beginning, have managed to enter public spaces and private houses over time. With the widespread use of small household appliances and electronic devices, the relationship between behavior and informatics continues to strengthen (Bhattacherjee, 2001).

Meeting the need for communication, which is one of the most important innovations brought by technology, has brought great benefits to information and communication. In addition, by equipping the infrastructures with technological devices in the field of transportation, it has made it possible to go beyond national borders and facilitate global travel. This situation has led to very positive developments for sectors that require high competition and physical facilities such as tourism in the services sector (Li et al., 2017).

With the continuous growth of the relationship between tourism and technology, the concept of smart tourism applications has emerged. In this process, sub-tourism applications such as accommodation services, travel services, recreation services, food and beverage services, which are managed with a traditional approach, have started to move to innovative and smart tourism applications by establishing a close relationship with technology. All the possibilities of technology are used, especially in the modernization of the vehicles used in travel and the renewal of the facilities involved in hospitality services. In addition, the use of smart tourism applications is becoming widespread in recreational activities carried out to provide entertainment, meeting and leisure experience. Similarly, technological developments are observed in gastronomic tourism activities, which include food and beverage services (Hall & Mitchell, 2003).

Technology-based smart applications used within the scope of gastronomic tourism faced a significant prejudice in the early periods and the changes in the preference of traditional methods were viewed negatively. The reason for this can be shown as the attachment to the culinary culture and the habits experienced in eating and drinking habits. However, as in every service sector, it is not possible to avoid technological developments and to stand against innovations in the field of gastronomy tourism (Camisón & Monfort-Mir, 2012). Because, in order to provide up-to-date services for human demands and to provide customer satisfaction,

CHAPTER 14

RENEWABLE ENERGY COMPANİES' RECENT OUTLOOK ON BORSA ISTANBUL WİTH MOORA AND MABAC METHODS

Orhan Emre ELMA[1]

1 Assist. Prof., Necmettin Erbakan University, Faculty of Applied Sciences, Accounting & Finance Department, Türkiye, ORCID: 0000-0002-3521-3677.

1. Introduction

The process of examining, measuring and evaluating the relationships between the items in the financial statements is called financial analysis. With financial performance, the position of companies in a given sector can be determined. In this way, financial stakeholders can observe in which areas a company has advantages and disadvantages compared to its competitors. Different approaches can be preferred for performance analyses using financial ratios that provide important information about the financial health of the company. In recent years, especially with the development of the internet and increased interaction between countries, it has become possible to access more information more readily. In performance analyses, where statistical methods were mostly preferred before, techniques such as big data analysis and machine learning have started to be used at an increasing rate. In performance analyses, which essentially involve multiple criteria, multi-criteria decision-making analyses (MCDA) are also increasingly preferred in the finance literature.

Capital markets are financial institutions shaped by the behavior and decisions of millions of investors. The dot-com crisis in 2000, the global financial crisis in 2008 and the pandemic that spread around the world in 2020 have significantly affected capital markets. In times of such increased volatility, investor behavior also changes and as a result, financial stakeholders may make less rational decisions. For this purpose, financial performance analyses, which can help to make the right investment decisions, are more needed in such processes.

The renewable energy sector has accelerated its development especially after the concept of sustainability term entered the agenda of the countries following the global warming problem was faced after the new millennium. In 2015, 17 sustainable growth targets were approved at the United Nations (UN) General Assembly with the participation of 193 countries. The seventh of these goals is affordable and cheap energy. Electric power generation is the fastest attracting investment among renewable energy alternatives. Changing trends have also changed the automobile preferences of consumers, and the number of electric vehicles sold worldwide exceeded 1 million in 2017 (Justus, 2018). In 2022, the number of electric vehicle sales exceeded 6.6 million (Bibra et al., 2022). In the new millennium, the Turkish energy market has attracted more than $60 billion in investments. In 2018, a $10.9 billion energy investment plan was announced to be realized over a 5-year period (Bayraktar, 2018).

In this study, the financial performance of 12 renewable energy companies traded in Borsa Istanbul will be analyzed with MOORA and MABAC methods. The 7 periods covering from the beginning of 2021 to the last quarter of 2022 will be analyzed with 6 criteria. Return on assets

CHAPTER 15

APPROACHES TO COMPETİTİVENESS AND PORTER DİAMOND MODEL[1]

Ayhan KULOĞLU[2]

1 This study is derived from the doctoral thesis titled "*Porter Model Analysis Of Competitiveness: Kayseri City Industrial Measurement and Structural Equaion Modeling Approach"* prepared by Ayhan KULOĞLU in April 2016 at Erciyes University Institute of Social Sciences (Supervisor: Prof. Dr. Faik BILGILI).

2 Ayhan KULOĞLU, Asst. Prof., Nevsehir Haci Bektas Veli University, Orcid ID: 0000-0003-0027-2893

Introduction

In a globalized world, countries are striving to increase their levels of prosperity through economic, technological, and sociological interactions. With the advent of technology, globalization, changes in trade patterns, and modes of production have all had an impact on countries' trade structures. As a result, changes have occurred in the competitive advantages that countries have over each other. Nowadays, a country's competitive advantage is closely related to the activities of the industries and firms in which it excels.

The concept of *"Absolute Advantage Theory"* was introduced by Adam Smith in his 1776 work *"The Wealth of Nations"* to explain countries' competitive advantages. This labor-value approach suggests that a country should specialize in producing goods in which it is more efficient than others and purchase goods it cannot produce from other countries. The theory posits that differences in labor productivity lead to competitive advantages among countries. In today's globalized world, with the involvement of various factors such as trade patterns, this theory has become a complex structure.

The rapid changes in technology have led to significant shifts in workforce, capital, and production methods, posing a challenge for countries to establish and maintain sustainable international competitive advantages. In today's rapidly evolving economic landscape, a country's competitive advantage cannot be explained by factors such as resource superiority or differences in labor productivity alone. Instead, a multitude of factors such as institutions, infrastructure, innovation, market size, work culture, technological adaptation, financial market development, macroeconomic environment, health and basic education, efficiency of goods and labor markets, and higher education all play a critical role in determining a country's competitive position in the world, as highlighted in *"Global Competitiveness Report 2014-2015"* by World Economic Forum (2015).

Michael Porter conducted a three-year study on over 100 sectors in 10 countries to investigate how nations achieve competitive advantage in his 1990 work, *"The Competitive Advantage of Nations".* In Porter's *"Diamond Model",* countries' competitive advantages are evaluated based on the competition of the industries they possess, and are connected to six factors, four of which are internal and two of which are external, that encompass the factors mentioned above. The internal factors include demand conditions, input conditions, related and supporting industries, and firm strategy and structure, while external factors such as the role of the state and chance are evaluated for their indirect impact on a country's

Introduction

In the last ten years, there have been wars in which a large number of deaths have occurred in Syria. Millions of Syrians had to migrate to other countries and take shelter in neighboring countries. Because of this, many material and moral losses were experienced by the Syrian society. People who leave their countries are classified into two groups: immigrants and asylum seekers. While immigrants make a councious decision to leave their countries, for example to improve their wealth, asylum seekers are obbliged to leave their countries under the danger of war, discrimination or political and religious reasons. Asylum seekers can be investigated by the authorities of the host country (Akıncı et al., 2015).

Syrian immigrants experienced psychological issues in relation to war and consequent migration (Kaya, 2019). Post-traumatic stress disorder and depression have been documented in the literature. A study conducted with Syrian migrants shows that the continued hardship has many effects on the mental health and the psychosocial status of adult and child migrants (Karataştan, 2021). Other adverse events related to the war further complicate the stress they experience with migration. (Karataştan, 2021).

In a research conducted on 310 Syrian immigrants in the Reyhanlı region of Hatay in Turkey, it was stated that around 80% of the migrants participating in the sample showed signs of post-traumatic stress disorder (Cengiz et al., 2019).

Many migrants face a traumatic situation before and after migration, which will negatively affect their mental health. Pre-migration risk factors are linked with difficult economic conditions, poor educational and professional status, political situations, and deterioration of social relations (Kirmayer et al., 2011). In this context, many asylum seekers may be subject to torture, rape, imprisonment, and physical trauma before leaving their country behind (Lee et al., 2012).

Uncertainty, unemployment, and social status expose migrants to additional trauma after they move to a different country. At the same time, language, difficulty to adapt to a different culture adversely affect the psychological health of migrants (Teodorescu et al., 2012).

Sleep disorder, attention deficit, suicide, claustrophobia, psychosomatic disorders, depression, post-traumatic stress disorder have been documented in the literature (Lee et al., 2012).

People diagnosed with post-traumatic stress disorder have more disturbing symptoms, such as sleep problems, nightmares, and constant replay of bad memories. In addition, these people often repeat their past

INTRODUCTION

This paper provides some basic historical information about the banking sector and its evolution through time. It also investigates the effect of the COVID-19 pandemic on the banking sector. For the first time, bank-established empires demanded a means to pay for foreign products and services with a currency that was easily traded, and this is when banking first developed. Over time, fragile, impermanent paper bills gave way to coins of various shapes and materials. Roman Empire's banking industry; in this empire, skillful founders and managers arranged banking inside of separate structures and separated it from such temples. Like loan companies today, moneylenders benefited during that time; however, the majority of legitimate traders for all of those government expenditures used an established bank. And finally, European monarchs understood the significance of the banking sector. Because banks operated on the kindness, purpose, and specific laws and agreements of the ruling authority, the royal powers started to accept loans, frequently under the king's circumstances, to make up for bad periods at the royal treasury. This easy funding encouraged kings to invest in unnecessary extravagances, expensive wars, and arms races with nearby kingdoms, which frequently resulted in crushing debt. However, Adam Smith explained his inaccessible hand theories and models when he created the first free-market bank in the Empire of British in 1776. The government's involvement in the banking industry and the economy at huge was confined by money - lenders and bankers due to their belief in a self-regulating economy. This competitive banking and free-market capitalism found lucrative regions around the world, where America would grow. So after that, merchant banks gain power, and the national banking system handled the majority of these banks' economic activities. Following that, in the 1800s, J.P. Morgan rescued the banking sector, which was associated with the global financial center and had significant political power in America. Through the revolutionary use of trysts and a disregard for the Sherman antitrust act, he established American Steel, AT&T, and International Harvester, along with duopolies and approaches in the train and shipping sectors. During the Second World War, the banking sector became modern, which saved the banking sector from destruction. The war demanded financial strategies requiring billions of dollars for banks and the Federal. This huge financing process produced firms with huge credit demands, prompting banks to combine to satisfy the demand. These massive banks had a global market. Despite this, the banking industry during the 1980s, particularly the 1990s, when the internet first appeared, was the most significant development time for the banking industry's digitalization system. The growing popularity of smartphones and phone banking speeded up the trend still further. While

CHAPTER 18

THE IMPACT OF DECLINE IN MORTALITY RATE ON ECONOMIC GROWTH IN THE LATE OTTOMAN EMPIRE[1]

Bilal İSLAMOĞLU[2]

İdris AKKUZU[3]

1 This chapter was produced from a part of the master thesis written by Bilal İslamoğlu at the Institute of Social Sciences of Maltepe University

2 Maltepe Üniversitesi, YL, bilalislam86@gmail.com, Orcid: 0009-0002-4217-7368

3 Dr. Öğ. Üyesi, Tekirdağ Namık Kemal Üniversitesi, iakkuzu@nku.edu.tr, Orcid:0000-0003-1069-9719

Introduction

Many academicians see two problems in developing and least developed countries, the first is a lack of capital and the second is the inability to follow the technological developments made by Europe (Cıpolla, 1980; p. 128); (Kaku, 2011; p. 296). However, Pamuk states that population decline due to continuous wars was the most important factor in the decline of the Ottoman Empire in the last centuries (1984; p. 85). Moreover, Zürcher compares the Ottomans with Russia, France, Germany, Great Britain and Austria-Hungary in terms of income, population, coal production and railways. He states that the Ottomans lagged behind European countries in all of the above factors (2010; pp. 63-66).

In this research, we take Zürcher's approach one step further and defend the idea that the limiting factor in Ottoman economic growth, which hindered coal production, the spread of railways, and the rise in income, was neither the lack of capital nor the lack of technology transfer, but the lack of labor.

Foreign Debt in the Industrialization Process

If the limiting factor in economic growth is a lack of capital, we should expect that borrowing money should help to solve economic problems. However, foreign debt in Ottomans did not help to solve economic problems. Ottoman Empire took its first foreign debt in 1854 and went bankrupt in 1875. In 1881, in exchange for forgiving 44% of the debt, the Ottoman Public Debt Administration was established and thus part of its income was diverted to pay the foreign debt (Tezel, 2002; pp. 81, 83).

This money was used to buy modern European weapons instead of investing in long-term economic growth (Zürcher, 2010; p. 65). The Ottoman Empire faced urgent military threats. Naturally, they spent the money they borrowed to buy weapons. Shabbir notes that a country cannot develop only with borrowed debt; the Ottomans learned this from their own experience (2008; p. 16). Trying to solve economic problems by borrowing foreign debt did not end well, but the Ottoman Empire continued to struggle for its existence. Ottomans with foreign direct investment started coal production and railway investment that enabled the economic growth process.

Coal Production and Railways

The Ottoman Empire had plenty of lands. They hoped that there might be coal mines. The Ottoman Navy showed coal samples to discharged soldiers and asked them to look for these mines in their villages, and in this way, coal was found in 1829. Production with modern technology started through foreign direct investment from Britain in 1848 during the Crimean

SHORT-TERM METRIC IN TV ADVERTISEMENTS: AN EXPERIMENTAL APPLICATION[1]

Fatma Nur YORGANCILAR ATATOPRAK[2]

1 In this study, the part of conceptual framework was produced from the doctoral thesis titled "'Tüketici Davranışı Nörolojisi: Nöroekonomi-EEG Yöntemiyle Nöromarketing Uygulaması / Neurology of Consumer Behavior: Neuromarketing Application with Neuroeconomics-EEG Method", which was carried out at Selçuk University, Institute of Social Sciences and published as a book by Çizgi Bookstore.

2 Assoc. Prof. Dr., Selçuk University, Konya, Türkiye. E – mail: fnyorgancilar@gmail.com

ORCID ID: 0000-0002-0016-9899

As cited by Yorgancılar (2015), Richard Caton, English physicist, discovered the presence of electricity current the rhythm in the brain produces and Hans Berger (1873-1941), German scientist, with an ordinary radio device he himself made, succeeded EEG (electroencephalograph) electrical activation of the brain- in recording to the paper. Therefore, according to the studies by Hans Berger, to whom we owe the current presence of Neurofeedback education, cerebral waves vary according to the conscious state of the person and is oscillated in the different frequencies. These cerebral waves in the different frequencies, as mentioned in the previous parts, are divided into four groups as Beta, Alpha, Theta, Delta". Also in this study, incoming signals and cerebral waves are measured by means of electrodes, and the relevant cerebral regions are shortly mentioned as follows. Although cerebral cortex forms the largest section of neural system, what are known about cerebral cortex, one of the structure belonging to the brain, are rather limited.

Temporal lobe (T7, T8): Temporal lobe memorial lobe, which takes place below Sulcus lateralisis, is quite important in evaluating the various senses for intellectual functions. Temporal lobe cortex, which stays below lateral fissure, has generally the features of six-layered neocortex and allocortex. Although neocortex undertakes the functions related to hearing, vestibular emotion, personality, memory and behavior, allocoretex (hippocampus and gyrus dentatus) is related to sense of smell and limbic system. Primary hearing area that is 41st and 42nd area of . Brodmann and Wernike area that is 22nd area of Brodmann also take place here. To shortly express, temporal lobe has features such as understanding tone of voice, its rhythm and its distance and what the voice belongs to. The part of temporal lobe neocortex near polus, with its connections with frontal and limbic lobes, makes relation [considered] associated with the behavior, emotion and personality. Although this part is also named as psychic cortex, the most medial part of temporal lobe cortex is hippocampus. The view that this region is related to learning and instantaneous memory is prevalent in medical literature. Posterior part is an area, where the information coming from hearing, seeing and somesthetic areas is integrated. In temporal lobe, there are primary hearing area (Brodman's 41st and 42nd areas) secondary hearing area (Brodman's 22nd area), taste center (Brodman's 43 area), smell (Brodman's 34th area) and smell association center (Brodman's 28th area) Lobus temporalis primary hearing center takes hearing sense from coti organ, and secondary hearing center is the part conserving previously learnt meaning of the voices and words heard. Therefore, it gives information to the individuals about the meaning of the voices heard, namely, memory refers to memory centers. Wernicke area of secondary talking center receives sensorial impulse from cortical seeing and hearing center and

CHAPTER 20

THE EFFECT OF STRATEGIC LEADERSHIP ON PRODUCT AND SERVICE INNOVATION: THE MODERATOR ROLE OF PERCEIVED ORGANIZATIONAL SUPPORT

Saadet Ela PELENK[1]

1 Dr. Faculty Member, Recep Tayyip Erdogan University, saadetela.pelenk@erdogan.edu.tr, https://orcid.org/ 0000-0002-8068-5518

1. INTRODUCTION

The rapid environmental changes and increasing competition caused by globalization make it difficult for businesses to survive. At this point, innovation is no longer a luxury for businesses, on the contrary, it becomes a necessity (Pelenk, 2016: 4). Innovation refers to both a process and an outcome. It is possible for businesses to increase their productivity by gaining competence in innovation. In this context, innovation is transforming new ideas into value-creating outputs. In a way, it is combining creativity with commercial mastery (Emiroğlu, 2018, p. 2). Innovation can happen in the company's products or services. Product innovation refers to taking existing products to the next level (incremental innovation) or introducing a completely new product (radical innovation) (Kırım, 2006 & Durna, 2002). In this context, the business can add different features to its existing product or service or create original new products or services that were not previously in the market. On the other hand, environmental business conditions, economic uncertainties, competition, increasing customer expectations, conscious consumers have made it necessary for businesses to adapt to innovation and change in terms of quality and functionality of products and services.

Innovation was first cited by the economist and political scientist Joseph Schumpeter (1934) as the driving force of development and defined it as "the introduction of a product that customers do not know yet, or a new feature of an existing product; the introduction of a new production method; opening of a new market, finding a new source for the supply of raw materials or semi-finished products, and having a new organization of an industry" (Emiroğlu, 2018: 4). In addition, innovation is a factor that increases product and service quality and functionality. However, many businesses do not realize or are yet to realize the importance of innovation. Businesses that are aware of innovation successfully implement this change in product, service, marketing, financial or organizational and reflect it on company performance.

According to OECD literature, innovation plays a central role in the growth of productivity and production. Thanks to the faster flow of information and technological advances, knowledge has become the main driver of economic growth and innovation. Along with the importance of knowledge, the pioneer of innovation, J. Schumpeter has largely formed the theories of innovation. In this context, economic development takes place through creative destruction, a dynamic process where "new technology replaces old one". According to Schumpeter (1934), radical innovations create significant destructive changes, on the other hand, incremental (gradual-incremental) innovations move the change process forward (Oslo Guide, 2005: 33). However, the trigger, driver and complement of the innovation process is the leader.

CONTENTS

CHAPTER 1

THE NEWEST SYNTHESIZED COUMARIN-BASED CHEMOSENSORS IN 2023

Hülya ÇELİK ONAR, Hasniye YAŞA 1

CHAPTER 2

CORROSION AS A METAL DISEASE (EXAMPLE STUDY: USE OF INHIBITORS TO PROTECT BRASS FROM CORROSION IN ACIDIC ENVIRONMENT)

Gülden ASAN..... 19

CHAPTER 3

CAUSES OF WORKPLACE ACCIDENTS IN THE FORESTRY INDUSTRY AND PREVENTATIVE STEPS

Ali Bahadır KÜÇÜKARSLAN 45

CHAPTER 4

SIMULATION IN PARTICLE PHYSICS

Çağın KAMIŞCIOĞLU..... 63

CHAPTER 5

IMPORTANCE OF ANALYSIS PHENOLIC COMPOUNDS BY HPLC

Elif APAYDIN 75

CHAPTER 6

ALDOSE REDUCTASE AND CANCER

Namık KILINÇ..... 91

CHAPTER 7

A CRITICAL REVIEW OF ADDITIVES USED IN PLASTICS

Abdulaziz KAYA..... 103

CHAPTER 8

SEMI-MARKOV VS CONDITIONAL COPULAS: A COMPARATIVE STUDY IN SEISMIC HAZARD ANALYSIS

Serpil ÜNAL ***127***

CHAPTER 9

A NEW RESEARCH ON SOME SPECIAL TYPES OF SURFACES

Ayşe YAVUZ ***147***

CHAPTER 10

FIRST TESS LIGHT CURVE SOLUTION OF CP AUR

Oğuz ÖZTÜRK ***167***

CHAPTER 11

LEFT-COVARIANT DIFFERENTIAL CALCULUS ON THE $\mathbb{Z}_2$ -GRADED HOPF SUPERALGEBRA

Fatma BULUT ***179***

CHAPTER 12

A RESEARCH ON GEOMETRIC APPROACH FOR EM WAVES IN MINKOWSKI SPACE

Melek Erdoğdu ***201***

CHAPTER 1

THE NEWEST SYNTHESIZED COUMARIN-BASED CHEMOSENSORS IN 2023

Hülya ÇELİK ONAR[1], Hasniye YAŞA[2]

1 Assoc.Prof., İstanbul University-Cerrahpaşa, Engineering Faculty, Chemistry Department, Organic Chemistry Devision Avcılar, İstanbul, Turkey ORCID: 0000-0003-2573-5751

Chemosensors are molecular devices that respond to their target and produce a visual signal, indicating the sensitivity of the device. Chemosensors are composed of two parts: the binding portion and the signaling portion. By non-covalent interactions, the binding component interacts with the analyte. On the other hand, the signaling component displays visibly discernible changes in color or chemical composition. Several factors, including binding power, solvent molecules and size, have an impact on chemosensors. The success of a chemosensor is closely related to both its selectivity and sensitivity for a very small amount of analyte. The number of chemosensor binding sites can be increased to enhance these features [1]. Chemosensors are referred to as molecules that alter their emission or absorption characteristics when they come into contact with other molecules. Chemosensors have been received a lot of attention due to their affordability, great sensitivity, and environmental friendliness [2].

Fluorescent sensors, a type of optical sensing units, are molecules that can change their fluorescent properties in the presence of an analyte. A fluorescent sensor consists of light source, supramolecular part, optical source, photomultiplier or photodiode parts. Fluorescent sensors are widely used in industries such as clinical biochemistry, analytical chemistry, medicine and the environment, due to their advantages over other types of technology such as high selectivity, high sensitivity, simple operation and fast reaction [3].

Proton transfer plays an important role in many chemical reactions and in various biological systems. A large number of coumarin derivatives that allow proton transfer, has been successfully used as fluorescent probe, a chemosensor for various anions, cell imaging, photo stabilizer and drug delivery applications [4].

Along with numerous applications in medicine, chemistry, life sciences and biotechnology, research in recent years has focused on highly sensitive and selective fluorescent probes to detect metal ions. An important metal in all living organisms, aluminum also plays a significant role in human life activities and is a fundamental component of enzyme-catalyzed

CHAPTER 2

CORROSION AS A METAL DISEASE (EXAMPLE STUDY: USE OF INHIBITORS TO PROTECT BRASS FROM CORROSION IN ACIDIC ENVIRONMENT)

Gülden ASAN[1]

1 Hitit University, Vocational School of Technical Sciences, guldenasan@hitit.edu.tr, Çorum,Türkiye ORCID: 0000-0002-6075-159X

1. INTRODUCTION

Corrosion can be defined as the chemical and electrochemical change of substances, especially metals and alloys, due to the effect of the environment, or the breakdown or physical dissolution of the substance without being dependent on mechanical factors. All metals and alloys are unstable in the earth's atmosphere and they want to corrode and return to their more stable forms (Hansson, 2011). Therefore, corrosion is a natural and spontaneous reaction. Studies are carried out to prevent this reaction in the industry. Because corrosion creates a great burden on the economies of countries (Javaherdashti, 2000). The loss of the corroded metal both disrupts the production process and harms the environment and worker health with chemicals spilled into the environment. Scientists and engineers make great efforts to solve this problem (Hou et al., 2017). In order to compare the corrosion resistance of metals and alloys with each other, the corrosion rate of each should be given quantitatively. The reduction in mass can be tracked to indicate a material's resistance to corrosion. It is known that corrosion occurs electrochemically. The amount of metal dissolved in a corrosion event is directly proportional to the amount of current flowing. Electrochemical methods for measuring the corrosion rate were generally introduced after the 1950s (Üneri, 1969). The measurement of the corrosion rate was based on the determination of mass reduction until recently. The biggest disadvantage of this method was that it took a long time to determine the corrosion rate and it gave an average rate as a result. Electrochemical methods, on the other hand, give much faster and more reliable results in determining the corrosion rate. The galvanostatic method is one of the first methods to measure the corrosion rate. In order to obtain an anodic or cathodic polarization curve with this method, a certain current is applied to these electrodes by changing the resistance R by connecting the metal as an anode, and the resulting potential is measured with a voltmeter. In the potentiostatic method, polarization data is obtained by measuring the direction and amount of the current after the potential of the metal is adjusted. In the mixed potential theory, three basic methods are used to determine the corrosion rate (Üneri, 2011). These:

1- Tafel extrapolation method: In this method, the anodic and cathodic Tafel curves for the corroded metal are determined experimentally and the linear parts of them are extended and the corrosion rate ($I_{cor.}$) and corrosion potential ($E_{cor.}$) for that system are determined from the cut-off points.

2- The method of extrapolation of the cathodic polarization curve to the corrosion potential: in this method, the polarization curve is obtained only for the cathodic branch. The method of determining the corrosion rate with the help of cathodic polarization curves was proposed by Stern in 1955.

CHAPTER 3

CAUSES OF WORKPLACE ACCIDENTS IN THE FORESTRY INDUSTRY AND PREVENTATIVE STEPS

Ali Bahadır KÜÇÜKARSLAN[1]

1 PhD Candidate, İstanbul Commerce University, bahadirkucukarslan@gmail.com, https://orcid.org/0009-0000-2580-146X

1. Introduction

Today, the availability of scarce production raw materials and the personnel with the technical know-how to process these products have become crucial factors. Because of this, companies have begun to give their staff extra attention in order to continuously benefit from their technical expertise. In this context, over the past 50 years, occupational health and safety (OHS) measures have been implemented for workers in many nations, particularly in European nations. The Occupational Health and Safety Law No. 6331 was adopted in Turkey on June 20, 2012. Because of this, it can be said that over the past seven years, interest in OHS studies has grown in Turkey. Due to these advancements, scientific research on occupational health and safety, which addresses issues like safe work practices in all industries, the prevention of workplace accidents, and the eradication of occupational diseases, has accelerated.

Mass production and consumption of goods and services have been brought about by factors like population growth, industrialization, the expansion and diversification of human needs, and the adoption of economic development. But as a result of the industrial revolution, the working class began to bear the cost of this social welfare. because those who are involved in mass production during this time are exposed to occupational diseases and work-related accidents. However, it has been recognized that these unfavorable working conditions are inconsistent with social justice, and legal regulations pertaining to workplace accidents and occupational diseases have begun to be made. Initially originating in quickly industrializing nations like England and the USA, these improvement movements aimed to improve working conditions for workers later spread to other nations that started the industrialization process (Ozgür, 2017).

Due to overuse and misuse of natural resources as well as the employment of workers in unfavorable conditions, the industrial revolution, which resulted from the classical understanding of development, pollutes the environment. Globally, however, action has been taken since the 1970s to halt this unfavorable development; in place of the traditional conception of development, the idea of sustainable development, also known as the green economy, has started to be applied. The adoption of a sustainable development strategy, however, was insufficient to completely eliminate and/or significantly reduce the negative effects experienced by the employees. For this reason, measures have been started to be taken on OHS at international and national levels. The United Nations Environment Program's 2011 report features one of the initiatives that have been undertaken at the global level over the past 20 years in this area. One of the three widely acknowledged objectives of the green economy is described in this report as "reviving the global economy, preventing job losses and creating new job

CHAPTER 4

SIMULATION IN PARTICLE PHYSICS

Çağın KAMIŞCIOĞLU[1]

1 Assoc. Prof. Dr. Ankara University, Faculty of Engineering, Physics Engineering Department, Ankara, Türkiye ORCID:0000-0003-2610-6447

1.Introduction

The aim of physics is to understand the events, functioning and order in the universe, to make inferences for the future, to develop new concepts, theories and models, and to put them into practice. For this purpose, it regularly examines, observes, interprets and explains the events in the universe and nature. It examines all relations related to matter, motion and energy in the universe with systematic and scientific approaches. With these studies, it makes significant contributions to the understanding of the events in nature and the universe, and gradually to the development of humanity. For this reason, it is difficult to explain the events in nature without physical science. In other words, many events in the environment we live in are explained by the laws, theories and rules of physical science. In this process, various branches of physical science are used. Among these, particle physics has a special importance (Kamışcıoğlu, 2017; 2020).

Particle physics is the science of the smallest particle or particle, which includes studies aimed at finding the basic building blocks of the universe. These are also called subatomic particles. Subatomic particles combine among themselves to form the earth, stars, other planets, that is, the entire universe. However, different branches of science examine each dimension in the universe. Particle physics, on the other hand, focuses on the internal structure of the atomic nucleus and studies at the subatomic level. Many particles reaching our Earth from space are of high energy. But detecting these particles or discovering their nature is not easy. For this, experimental environments are required. In experimental physics, the physical state realized in the experimental environment is examined. This situation is not easy for high-energy or subatomic particles. Special mechanisms and advanced technology are required to obtain these particles or to increase them to high energies. For this purpose, CERN, known today by the abbreviation of the European Center for Nuclear Research or its French name Conseil Européen pour la Recherche Nucléaire, is the world's largest particle physics laboratory. With its establishment in 1954, it is a laboratory that shapes particle physics today. In this laboratory, subatomic particles are studied with various projects and collaborations. In the projects, the characteristic features of subatomic particles are tried to be revealed. The particle beams obtained for this purpose are collided with each other with different particles or nuclei. These interactions are resolved by detecting the resulting particles. However, a lot of data is collected in experiments (CERN, 2023).

To convert the vast amounts of data collected in particle collider experiments into precise measurements of nature, particle physicists need to build models in high-dimensional data. To this end, experimental particle physicists use complex computer simulations for the occurrence of ele-

CHAPTER 5

IMPORTANCE OF ANALYSIS PHENOLIC COMPOUNDS BY HPLC

Elif APAYDIN[1]

1 Giresun University, Central Research Laboratory Application and Research Center

1. Reactive oxygen species (ROS)

While oxidation is a very important process for living organisms, oxygen is known as the molecule of both life and death. Oxygen is essential for aerobes but lethal or growth arresting for anaerobes. Incomplete reduction of oxygen also leads to the formation of reactive oxygen species (ROS). These cell-damaging reactive oxygen species cause cell death when antioxidant defense systems are insufficient. Reactive oxygen species need to be at low levels to function in most biochemical processes with intramolecular transduction in cell differentiation and cell growth arrest, immune protection and defense against microorganisms (Ghosh & Myers, 1998; Yin, Yin & He, 1995; Bae, Kang & Seo, 1997; Lee, Galoforo & Berns, 1998). The occurrence of high levels of reactive oxygen species, or the inability to remove them, can lead to oxidative stress, which can cause very serious metabolic breakdowns and damage biological molecules (Chopra & Wallace, 1998; Wojtaszek, 1997). Antioxidants are generally defined as substances that prevent the formation of free radicals. Antioxidants, which are naturally present in metabolism or ingested with food, significantly delay or inhibit the oxidation process when present in low concentrations. In other words, an antioxidant is a substance that significantly delays/prevents the oxidation of an oxidizable substrate such as lipids, proteins, carbohydrates and nucleic acids when present in lower concentrations(Yin, Yin & He, 1995). Some free radicals and their damages are given in the Table 1.

Table 1 *Free Radicals and Properties of Some Free Radical Producing Species (Halliwell, 1994)*

Name	Symbol	Property
Hydrogen radical	$H^{\bullet}$	The simplest known radical
Hydroxyl radical	$OH^{\bullet}$	The most reactive oxygen metabolite radical. Attacks all molecules in the human body
Superoxide radical	$O_2^{\bullet-}$	First intermediate product of oxygen metabolism
Hydrogen peroxide	H_2O_2	Low reactivity, poor molecular damage properties
Singlet oxygen	O_2	Short half-life, strongly oxidative form
Perhydroxy radical	$HO_2^{\bullet-}$	Rapidly dissolves in lipids and increases lipid peroxidation
Peroxyl radical	$ROO^{\bullet-}$	Less effective than perhydroxyl, lecolyzes lipids
Trichloromethyl radical	$CCl_3^{\bullet}$	CCl4 metabolism, a radical produced in the liver
Thiyl radical	$RS^{\bullet}$	General name for species with sulfur and unpaired electrons

CHAPTER 6

ALDOSE REDUCTASE AND CANCER

Namık KILINÇ[1]

1 Assoc. Prof. Dr. Iğdır University, Vocational School of Health Servi-ces, Department of Medical Services and Techniques, Iğdır, Turkey ORCID: 0000-0002-9102-1370

Polyol pathway

Glycolysis is a fundamental metabolic process that happens in the cytoplasm of cells, which aims to transform glucose into two pyruvate compounds. It operates in both anaerobic and aerobic organisms and can function without oxygen. Hexokinase, an essential enzyme in glycolysis, enables cells to phosphorylate glucose and use it as an energy source. When there is an excessive amount of glucose in the cells, hexokinase becomes saturated, allowing glucose to enter the cells through the polyol pathway (Berrone, Beltramo, Solimine, Ape, & Porta, 2006). Once glucose has been consumed, important enzymes in the polyol pathway go to work, such as aldose reductase (AR), which uses a nucleotide adenine dinucleotide phosphate (NADPH) to convert glucose into sorbitol (Niimi, Yako, Takaku, Chung, & Sango, 2021). Sorbitol dehydrogenase is a different significant enzyme that facilitates the conversion of sorbitol into fructose (SD). As a result of this conversion, nicotinamide adenine dinucleotide (NAD) is transformed into nicotinamide adenine dinucleotide hydrogen (NADH) (Lorenzi, 2007). NADPH is primarily used to facilitate the reduction of glutathione and the subsequent generation of nitric oxide (NO). However, variations in NADPH concentration lead to either a drop in glutathione content or a deficit of it. Glutathione deficiency sets off a chain reaction of oxidative stress (OXS), which promotes hemolysis in those who are affected (Mytilineou, Kramer, & Yabut, 2002). An elevated $NADH/NAD^+$ ratio, caused by the use of NAD^+ by sorbitol dehydrogenase, is associated with several metabolic and signaling alterations that affect cell functioning and enhance ROS generation (Baynes, 1991; Giacco & Brownlee, 2010; Kinoshita, 1990). This could be a mechanism for the formation of intracellular oxidant species, as the excess NADH could serve as a substrate for NADH oxidase. A reduction in antioxidant defenses and the production of oxidant species would put cells at risk of oxidative stress (oxidant-derived tissue injury), which can set off a cascade of damaging events in the cell.

In diabetic complications, a decrease in NADPH/NADP and an increase in $NADH/NAD^+$ levels could be responsible for other biochemical abnormalities (Baynes, 1991; Gabbay, 1973, 1975; Giacco & Brownlee, 2010; Kinoshita, 1990). In cells where there is high sorbitol dehydrogenase activity, this can lead to an increase in the $NADH/NAD^+$ ratio (Figure 1). This ratio change can increase oxidative stress by reducing the regeneration of cellular antioxidants (such as reduced glutathione) and decreasing the availability of NADPH, which decreases the activity of catalase, an enzyme that converts ROS and hydrogen peroxide (H_2O_2) into water. The polyol pathway can reduce the level of reduced glutathione, which makes cells more vulnerable to oxidative stress from within the cell. Hyperglycemia increases the $NADH/NAD^+$ ratio in cell populations prone to

CHAPTER 7

A CRITICAL REVIEW OF ADDITIVES USED IN PLASTICS

Abdulaziz KAYA[1]

1 Asst.Prof.Dr. Department of Metallurgical and Materials Engineering, Gaziantep University email: akaya@gantep.edu.tr Orcid ID: 0000-0001-8767-1998

1. Introduction

Since they have comparatively long chains and large molecular weights, polymers stand out from all other compounds. Plastics are polymers that have been altered with additives for commercial use (Grossman & Lutz Jr, 2000). Because of its low cost, versatility, durability, and light weight, plastics have considerably enhanced human lives (Pérez-Albaladejo, Solé, & Porte, 2020). In the plastic materials used to make the majority of products, the basic polymer is combined with various additives to enhance the polymer's performance (e.g., during shaping via injection molding, extrusion, blow molding, vacuum molding, etc.), functionality, and ageing characteristics (Hahladakis, Velis, Weber, Iacovidou, & Purnell, 2018). Some of these improvements to properties include better resistance to oxidation, high temperatures, UV radiation and impact loads as well as alteration of a wide variety of other properties. Compounding is the process of incorporating necessary chemicals into polymers to produce these effects (Bolgar, Hubball, Groeger, & Meronek, 2015).

The most often used additives in a variety of polymeric materials include plasticizers, flame retardants, antioxidants, acid scavengers, light and heat stabilizers, lubricants, pigments, antistatic agents, and slip compounds. Each one of them contributes in a particular way to the ultimate functional attributes of a plastic product (Hahladakis et al., 2018). Without additives, polymer industry is unattainable. The capability to overcome processing issues, performance constraints on properties, and environmental stability constraints is made possible by additives in plastics. The need to meet new environmental health requirements, simpler processing, improved physical qualities, better long-term performance, and other factors drive the ongoing evolution and diversification of additive packages (Bart, 2005). A large variety of different additives are employed as auxiliary materials in the manufacturing of polymer goods. The proportion of each additive in the auxiliary market (quantitative breakdown) is depicted in Figure 1. (Kosiński, Rykowska, Gonsior, & Krzyżanowski, 2022).

Many additives affect a plastics compound in multiple ways. Plasticizers frequently assist with lubrication and processing. Weathering is influenced by light stabilizers as well. Often employed as a pigment, carbon black also serves as a reinforcement, an electrically conductive component, and a light shield (Murphy, 2001). The polymer and the additives may be entirely miscible or completely immiscible, as is the case with fillers and fiber reinforcers. Due to their low solubility, the majority of surface property modifiers migrate to the polymer surface where their features are shown. Certain additives, like antioxidants or UV stabilizers, are employed in very small amounts, but others, like fillers, reinforcing fibers, and plasticizers, typically make up a sizeable portion of the final formulation of

CHAPTER 8

SEMI-MARKOV VS CONDITIONAL COPULAS: A COMPARATIVE STUDY IN SEISMIC HAZARD ANALYSIS

Serpil ÜNAL[1]

1 Dr. Öğr. Üyesi, Usak University, Faculty of Arts and Sciences, Department of Mathematics, Uşak, Turkey, E-mail:serpil.unal@usak.edu.tr
ORCHID: 0000-0002-4043-6832

Introduction

Turkey is located in the Alpine-Himalaya or Mediterranean Environment earthquake belt, which is one of the 3 important earthquake belts on the world, and where approximately 20-25% of the earthquakes occurred in the world every year. It is also a country having an extremely high earthquake risk with regard to geological, historical and instrumental current period earthquake activities of this belt. Tsapanos and Burton (1991) supported this with a study using the Gumbel extreme value theory and showed that Turkey ranks tenth among the 50 active countries in the world in terms of seismicity. West Anatolia, which is considered as the application region in this study, is also among the important mechanisms of active tectonics in Turkey. Due to its highly complex tectonic appearance, the region is constantly exposed to earthquakes and creates a region with high earthquake potential in the future. For this reason, studies on the prediction of earthquakes in the West Anatolia region including big cities, especially such as the third largest city of Turkey, İzmir, have become very important.

Today, it is thought that it is not possible to know exactly where, when and how large earthquakes will occur and to prevent this destructive natural event. However, many researchers have tried to estimate the parameters of possible earthquakes and the intensity of the ground motion they create with the statistical studies available in fields such as geophysics, geology. The Poisson model, one of the most frequently used statistical models, is on the assumption that the time and place occurrences of earthquakes are independent of each other. Since it can not be a realistic approach to assume that earthquakes that occurred in a local area are independent from each other, although risk determinations with the Poisson model give good results in large areas, they are insufficient in local studies. Considering this problem, the need to use a more valid model has emerged in studies to be conducted in a local area (Altınok, 1988). Therefore, in later studies, the Markov model, which is on the assumption that earthquakes are dependent on space and time, in conjunction with the Elastic Rebound Theory, the Semi-Markov model based on this model (Altınok, 1988; Altınok, 1991; Altınok and Kolçak, 1999; Sadeghian et al, 2008; Sadeghian, 2012; Causapin, 2018) and Hidden Markov model, which is a special case of the

CHAPTER 9

A NEW RESEARCH ON SOME SPECIAL TYPES OF SURFACES

Ayşe YAVUZ[1]

1 Assoc. Prof. Dr. Ayşe Yavuz, Necmettin Erbakan University, Ahmet Keleşoğlu Education Faculty, Konya, Turkey. Orcid ID: 0000-0002-0469-3786.

1. Introduction

One of the topics of differential geometry was indeed curves and surfaces with special properties. Ruled surfaces are well-known surface classes with many interesting properties. They are defined as families of smooth single-parameter lines. A ruled surface is a surface that is "swept away" by a straight line moving through space. Many ruled surface structures exist, including the hyperboloid, hyperbolic paraboloid, and cylinder.

Another important type of surface is the constant slope surface, which is a type of ruled surface. A surface is called a constant slope surface if its position vector makes a constant slope with the normal at each point on the surface. Munteanu examined these type surfaces and classified them in (Munteanu, 2010). In recent years, constant slope surfaces have been investigated in many studies (Fu and Yang, 2012; Fu and Wang, 2013; Munteanu, 2010, Maleček at all, 2009). In a surface with a constant slope, if the base curve α is a circle and the director vector is given by constant slope, then the surface is a rotational surface.

Frenet-Serret frames along a space curve are the most well-known frame fields. The Serret-Frenet frame describes the kinematic properties of a particle moving in Euclidean space along a continuous and differentiable curve.

Clifford algebra provides a unified algebraic framework for the direct expression of geometric ideas that underlies algebraic mathematical theories of differential geometry, projective geometry, and affine geometry.

Quaternions are examples of geometric algebras (Ablamowicz, 2004; Ablamowicz and Sobczyk, 2004). Quaternions are used in both theoretical and applied mathematics, particularly in three-dimensional rotation calculations. Geometric algebra, which includes the concept of direction, is a natural extension of the actual number system. Various physical applications of the quaternion calculus are discussed, including crystallography, the kinematics of rigid body motion, the special theory of relativity, classical electromagnetism, the equation of motion of the general theory of relativity, and Dirac's relativistic wave equation (Girard, 1984; Erdoğdu, 2019; Erdoğdu and Özdemir, 2015; Erdoğdu and Özdemir, 2020). Quaternion numbers are the natural physics analysis tools. Their properties as rotation generators make them extremely useful in Newtonian mechanics, scattering experiments like crystallography, and quantum mechanics (Girard, 1984).

FIRST TESS LIGHT CURVE SOLUTION OF CP AUR

Oğuz ÖZTÜRK[1]

1 Research Asst. Oğuz ÖZTÜRK, PhD, Çanakkale Onsekiz Mart University, Faculty of Science, Department of Physics, Çanakkale Onsekiz Mart University, Astrophysics Research Centre and Observatory
ORCID: 0000-0002-9135-9865

Introduction

In binary star systems with orbital inclinations close to 90 degrees, the stars periodically eclipse each other during their orbital motion. Such binary star systems are called as eclipsing binary star systems.

Eclipsing binary star systems are of great importance to astrophysicists because of the information they contain. The geometric parameters can be obtained reliably from their precise ground and space based observations. From spectral and photometric observations of such systems, the masses, temperatures, and radii of the components can be found. In this way, it is possible to obtain information about the evolutionary processes of stars.

Table 1. Some parameters of CP Aur taken from literature.

Parameter	Description	Unit	Value	Reference

CP Aur considered in this study is a neglected eclipsing binary star system. However the system has been included in some binary star catalogs (see Qian et al. 2018, Malkov et al. 2006, Hoogeveen 2005, Guthnick and Schneller 1939, Morgenroth 1933). Some parameters of CP Aur is presented in Table 1 with their references.

In this study, the Transiting Exoplanet Survey Satellite (TESS) (Ricker et al., 2015) light curve of CP Aur was solved for the first time. The absolute physical parameters were also estimated and results are discussed.

TESS Observations

Detailed information on the TESS observations can be found in the study of Ricker et al. (2015). The TESS observations of CP Aur were made between 28 November 2019 and 23 December 2019 (sector 19). The observations were made with a broad band filter (600-1000nm) and an exposure time of 1800s

CHAPTER 11

LEFT-COVARIANT DIFFERENTIAL CALCULUS ON THE $\mathbb{Z}_2$-GRADED HOPF SUPERALGEBRA

Fatma BULUT[1]

1 Doç. Dr. Fatma BULUT, Department of Mathematics, University of Bitlis Eren, Bitlis, Turkey, ORCID: 0000-0002-7684-6796

In the mathematical modeling, Lie group differential geometry is important and it can be tempting to also generalize the equivalent notions of differential geometry when a quantum group (or a Hopf algebra) is viewed as a generalization of the notion of a group. In this paper, we prepared a left-covariant noncommutative differential calculus on the Hopf superalgebra $F(\mathbb{C}_q^{2|1})$. This calculus contain functions on the superspace $\mathbb{C}_q^{2|1}$ and differentials. In the cause of establish a differential diagram, we use the left-covariance. Finally, we explicitly construct a vector field quantum Lie superalgebra.

1. Introduction

In recent years, the notion of differential calculus on algebras has been playing important role in mathematics and physics dated from Connes' work [1] on noncommutative geometry. Noncommutative geometry is the idea that the geometric structure is constructed by considering the generators of an algebra that need not be commutative as coordinate functions. If an algebra is associative, it can be aimed to extend it to a differential algebra as in commutative geometry. Woronowicz is responsible for the groundbreaking work on covariant differential calculi on the quantum groups [2, 3]. Several authors, including [4-10], have studied specific examples of covariant noncommutative calculus on quantum spaces and groups.

Wess and Zumino [11] introduced another approach and defined differential forms as differential of coordinates for the quantum space defined by Manin [12]. Also in [13], Manin investigated a multiparametric deformation of the general linear supergroup.

CHAPTER 12

A RESEARCH ON GEOMETRIC APPROACH FOR EM WAVES IN MINKOWSKI SPACE

Melek ERDOĞDU[1]

1 Assoc. Prof. Dr. Melek Erdoğdu, Department of Mathematics and Computer Sciences, Faculty of Science, Necmettin Erbakan University. ORCID ID: 0000-0001-9610-6229

1. Introduction

Electric and magnetic fields vibrate together to produce EM waves (electromagnetic waves). Electric and magnetic fields oscillate, which causes electromagnetic waves to form. This is exactly where physics and geometry work together. More precisely, $(\vec{t}, \vec{\mathcal{E}}, \vec{\mathcal{B}})$ are investigated by means of Serret Frenet frame of the curve $\mathfrak{I}$. There is a new study which use these relationships by rotation transformation (Yavuz, 2022). In this context, this paper investigates these relationships in Minkowski space.

Studying EM wave equations just in Euclidean space is an incomplete strategy given the significance of Minkowski space in other areas of physics. Details on EM wave theory can be found in many studies (Van Bladel, 2007; Wangsness, 1979; Feibelman, 1982; Chen and Chan 2007; Ishimaru, 2017; Polo and Lakhtakia, 2011). This allows for the investigation of the differential geometric and physical properties of EM waves in Minkowski space. EM wave vector fields are Lorentzian orthogonal to one another along a nonnull electromagnetic wave. An adjusted nonnull frame $\{\vec{t}, \vec{\mathcal{E}}, \vec{\mathcal{B}}\}$ is established on EM wave as a consequence. $\{\vec{t}, \vec{n}, \vec{b}\}$ of nonnull curve $\mathfrak{I}$ provides EM wave vectors (Körpınar et al., 2020). Anholonomic coordinates with eight parameters and three partial differential equations are described by a vector field (Marris and Passman, 1969; Rogers and Schief, 2003). According to geometric approach, circular (hyperbolic) rotation occurs in normal plane of $\mathfrak{I}$ with geometric phase (angle) θ. There are many studies examining circular or hyperbolic rotations (Özdemir and Erdoğdu, 2014; Erdoğdu and Özdemir 2020; Erdoğdu and Özdemir, 2015). There is a linear transformation between $\{\vec{t}, \vec{n}, \vec{b}\}$ and $\{\vec{t}, \vec{\mathcal{E}}, \vec{\mathcal{B}}\}$. Rytov's law also explains the parallel propagation of $\vec{\mathcal{E}}$ and $\vec{\mathcal{B}}$ across the tangent direction of an electromagnetic wave. See (Erdoğdu, 2015) for more details on parallel frames. Moreover, it is recommended to examine studies (Hacısalihoğlu, 2000; Do Carmo, 1976; Shifrin, 2015) for the basic rules of differential geometry used in the study.

This study's main objective is to investigate electromagnetic waves in Minkowski space. Depending on the characteristics of the tangent direction, and it is also the direction of the electromagnetic wave, three different cases are examined independently. Generalized Serret Frenet formulas are used for further calculations. The relations between the frames Serret Frenet and EM wave vectors are obtained. It is proved that the hyperbolic or circular rotation takes places of normal plane of $\mathfrak{I}$ with the geometric phase θ. An application is investigated by physical and geometric approach.

1 Dr. Öğr. Üyesi, SANKO Üniversitesi Sağlık Bilimleri Fakültesi, Hemşirelik Esasları Anabilim Dalı https://orcid.org/0000-0003-4807-5346
2 Hemşire, SANKO Üniversitesi Lisansüstü Eğitim Enstitüsü, Hemşirelik Anabilim Dalı

Giriş

Bakım, duygu ve değerleri olan, mesleki bilgi ve becerilerinin bir arada olduğu, hemşireliğin temel mesleki uygulamalarındandır (Yılmaz ve Üstün, 2018). Jean Watson "Bakım kavramının hemşireliğe özgü bir değer olduğunu, hastanın yaşadığı deneyimlerle hemşirelik bakımının açıklanabileceğini, hemşire hasta yanında olmasa bile bu yaşanılan deneyimin hastanın aklında kaldığını ve hastanın bunu hissettiğini vurgulamaktadır." (Watson, 2012).

Hastaların zorlu dönemlerinde bakımı sağlamak kolay olmamaktadır. Bu nedenle hemşirelik mesleğinin merhamet duygusunun en fazla yaşandığı meslek gruplarından olduğu söylenebilir (Dalgalı ve Gürses, 2018). Merhamet, insan sevgisinin kökeninde bulunan, zor ya da daha kötü durumdaki bir kişi ya da gruba yönelik, kişide adalet ve insan sevgisi oluşturan bir duygudur (Akçetin, 2016). Merhamet insanları zor zamanlarda birleştirir. Hem fiziksel hem de zihinsel sağlığı geliştirebilecek insan ilişkileri kurmanın temelini sağlar (Bramley ve Matiti, 2014).

Merhamet, hemşirelik ve hemşire olmanın bir erdemi ve gerekli bir özelliğidir. Başkalarının acılarına tanık olmanın uyandırdığı ve onlara yardımcı olacak önlemler almaya yol açan bir duygudur. Merhamet, bakımın insani ve ahlaki bir parçasıdır ve birçok hemşirelik literatürüne göre merhamet, hemşirelik mesleğinin felsefi temeli ve merkezidir. Hastaların bakım gereksinimlerine merhamet ile yanıt vermek, hemşireliğin profesyonel standartlarından biridir (Bramley ve Matiti, 2014).

Merhamet kavramının, hasta merkezli bakımda önemli bir yere sahip olduğu ve hemşirelik bakım hizmetlerinin kalitesinin arttırılmasında olumlu etkiye sahip olduğu görülmektedir (Dewar, 2011). Hemşirelikte merhamet, hastaların yaşadıkları zor durum karşısında sadece empati kurmak değil, hastaların güçlenmelerini sağlamak anlamına da gelmektedir (Dewar ve ark., 2014).

Hemşirelik mesleği, hastaya şevkat ile yaklaşıp, çektiği acıyı fark ederek, empatik bir yaklaşım ile anlamayı, adalet duygusu ile harekete geçip merhametli bir bakım sunmayı gerektirir. Bu bölümde merhamet ve merhametli bakım kavramına ve merhametin hemşirelik bakımındaki yerine, merhametli bakım davranışları bu davranışları gerçekleştirmede yaşanan engeller ve merhametli bakım sunabilmek adına yapılabilecek uygulamalara yer verilmiştir.

1. Merhamet Kavramı

Merhamet, isim grubu içinde yer alan Arapça kökenli bir kelime olup İngilizce'de kelime karşılığı "compassion" sözcüğüdür. Türk Dil Kuru-

BÖLÜM 2

KAN VE KAN ÜRÜNÜ TRANSFÜZYONUNDA TEMEL İLKELER

Ummahan DALKILINÇ HÖKENEK[1]
Jülide SAYIN KART [2]

1 Uzm. Dr., Sağlık Bilimleri Üniversitesi Kartal Dr. Lütfi Kırdar Şehir Hastanesi Anestezi Kliniği E-mail: ummahandalkilinc@gmail.com
2 Uzm. Dr. , Sağlık Bilimleri Üniversitesi Kartal Dr. Lütfi Kırdar Şehir Hastanesi Anestezi Kliniği E-mail: julidesayin@hotmail.com

Kan, farklı fonksiyonlara sahip komponentler içeren canlı vücut dokusudur. Bir vücut dokusu olması sebebiyle kan ve kan ürünü transfüzyonuna doku nakli gibi yaklaşılması gerekmektedir (1).

Tarihte insandan insana kan transfüzyonu ilk olarak 1818 James Blundell tarafından yapılmıştır. Karl Landsteiner'ın 1901'de ABO kan gruplarının keşfi ve ilerleyen 10 yıl içinde yapılan araştırmalar ile kan transfüzyonu büyük ivme kazanmıştır (2). Ülkemizde ise ilk transfüzyon çalışmaları 1921 yılında Prof. Dr. Burhanettin Toker ile başlatılmış olup, ilk transfüzyon iişlemi 1938 yılında Cerrahpaşa Tıp Fakültesi'nde uygulanmıştır (2). Kızılay Kongresi'nde 1953 yılında kan yardım teşkilatı kurulma kararı alınmıştır. Kongre ardından yürütülen eğitim ve teknik çalışmaların sonucunda 1957'de İstanbul ve Ankara'da ilk modern kan bankaları kurulmuştur.

Kan gruplarının tanınması, antikoagülan kullanımı ve sterilizasyon sorunlarının çözümü ile 20. yüzyılın başlarından günümüze kan transfüzyonu yeni bir bilim alanı haline gelmiştir.

Günümüzde artan ortalama yaşam süresi ve hastalara uygulanabilen tedavi stratejileri ile kan ve kan ürünü kullanımında artış görülmektedir. Gerek artan ihtiyaç, gerekse hastaların ihtiyaç duyduğu spesifik kan ürünün faydaları göz önünde bulundurularak; kan transfüzyonu yalnızca ihtiyaç halinde ve uygun ürün ile yapılmalıdır (3-5). Bu aşamada kan transfüzyonu endikasyonları, kontrendikasyonları, uygun kan ürünü ve miktarının belirlenmesi büyük önem arz eder.

KAN ÜRÜNLERİ VE GENEL TANIMLAR

Kan Bileşenlerinin Hazırlanması ve Saklanması

Dönordan alındıktan sonra kan torbasındaki hücrelerin canlılığını sürdürebilmesi için koruyucu solüsyonlara, kan ürünü bileşenlerinin pıhtılaşmasının önlenmesi için ise antikoagülan solüsyonlara ihtiyaç duyulur. Kullanılan solüsyonuna göre saklama süresi 21-35 günlere kadar uzamaktadır. Sıklıkla kullanılan solüsyonlar dekstroz, adenin, sitrat ve sodyum bifosfatdır. Bu maddelere ek olarak koruyucu solüsyon kullanımı ile torbalanmış kan ürünü saklanma süresi 42 güne uzamaktadır. Ülkemizde saline, adenin, glikoz, mannitol (SAG-M) koruyucu olarak kullanılan bir solüsyondur (4, 5).

Kan Ürünleri

- Tam kan
- Eritrosit süspansiyonu
- Taze donmuş plazma
- Trombosit süspansiyonu
- Kriyopresipitat

BÖLÜM 3

BAKTERİYEL QUORUM SENSİNG: BİR İLETİŞİMDEN DAHA FAZLASI

Enis Fuat TÜFEKCİ[1]

1 Dr. Öğr. Üyesi, Kastamonu Üniversitesi Tıp Fakültesi, Tıbbi Mikrobiyoloji AD, ORCID ID: 0000-0001-5051-2694, e-mail: etufekci@kastamonu.edu.tr / eft88@hotmail.com

1. Giriş

Canlılar ses, görsel sinyaller ve koku gibi yollarla iletişim kurabilmektedir. Son zamanlarda iletişimin sadece yüksek yapılı organizmalara has bir özellik olmadığı, bakteriler ve diğer tek hücreli canlılarında sosyal bir yaşamlarının olduğu ve iletişim kurdukları tespit edilmiştir. Bakterilerin otoindükleyici adı verilen çeşitli sinyal molekülleri ile haberleştiği ve belli bir popülasyon yoğunluğuna ulaştıktan sonra türe özgü davranışlar sergilediği bilinmektedir. Quorum sensing (QS, çoğunluğu algılama) denilen bu olgu ilk olarak 1970'li yıllarda bir deniz bakterisi olan *Vibrio fischeri* üzerine yapılan çalışmalar ile ortaya çıkmıştır. Az sayıda olduklarında biyolüminesan pigmentini üretemeyen bu bakteriler belli bir yoğunluğa ulaştıklarında ışık saçtıkları keşfedilmiştir. *V. fischeri*, deniz ortamında serbest olarak bulunan veya mürekkep balığı gibi çeşitli deniz canlıları ile simbiyotik ilişki içerisinde yaşayan bir bakteri türüdür. Bu bakterilerin serbest yaşam döneminde sentezlediği sinyal molekülleri düşük seviyededir. Ancak mürekkep balığının üzerindeki kapalı alanlara girip simbiyotik ilişki yaşadıkları zaman sentezleyip saldıkları sinyal molekülleri ortamda birikmeye başlar. Belli bir eşik değere ulaşan sinyal molekülleri aynı türün diğer suşları tarafından algılanmaya başlanır ve bakterilerde biyolüminesan üretimi için gerekli lüsiferaz enziminin sentezi artar. Daha sonraki zamanlarda QS sisteminin *V. fischeri* türüne özgü olmadığı, birçok bakteri türünün çoğalma, hareket etme, sporulasyon, biyofilm oluşturma, pigment, enzim ve toksin sentezi gibi çeşitli fenotipik, fizyolojik ve patojenik karakterlerini kontrol altında tutmak için QS sistemini kullandıkları keşfedilmiştir (Lu vd., 2022) .

2. Quorum Sensing (QS)

QS, bakterilerin çeşitli sinyal moleküllerini kullanarak popülasyon yoğunlukları hakkında bilgi sahibi olmaları ve buna göre türe özgü davranışlarını sergilemek adına ilgili genlerinin ekspresyonunu düzenlemeleri olgusudur (Miller & Bassler, 2001) (Şekil 1).

Şekil 1. *Bakterilerde QS mekanizması [Lu vd., (2022)'den uyarlanmıştır].*

BÖLÜM 4

ANTOSİYANİNLERİN BAĞIRSAK MİKROBİYATA KOMPOZİSYONUNU DÜZENLEYİCİ ETKİLERİ VE HASTALIKLARLA İLİŞKİSİ

Gizem GÜLOĞLU[1], Çağlar DOĞUER[2]

1 Diyetisyen Gizem Güloğlu, Tekirdağ, Türkiye, ORCID: 0009-0005-2497-7689
2 Dr. Öğr., Tekirdağ Namık Kemal Üniversitesi Sağlık Bilimleri Fakültesi, Beslenme ve Diyetetik Bölümü, Tekirdağ, Türkiye, ORCID: 0000-0003-0059-1819

1.GİRİŞ

Başlıca besinlerin sindirimi ve emiliminde özelleşmiş bir organ olarak bilinen bağırsak aynı zamanda trilyonlarca bakteriye ev sahipliği yapmaktadır. Bu bakterilerin tümü bağırsak mikrobiyotası olarak adlandırılmaktadır. İkinci beyin olarak da kabul edilen bağırsak mikrobiyotası kompozisyonunun insan sağlığı ile doğrudan ilişkili olduğu yönünde literatürde çok sayıda bilimsel kanıt bulunmaktadır. Bağırsak mikrobiyota kompozisyonunun bozulmasının obezite, metabolik sendrom, inflamasyon, kanser ve diğer birçok hastalığın oluşum ve/veya gelişimi ile ilişkili olabileceği yapılan araştırmalar ile gösterilmiştir. Bu nedenle kronik hastalıkların tedavisinde, bağışıklığın güçlendirilmesinde ve sağlığın geliştirilmesinde beslenmenin bağırsak mikrobiyotasını düzenleyici etkilerinin anlaşılması araştırmaların odak noktası haline gelmiştir.

Fonksiyonel besinler insanoğlunu geçmiş dönemlerden beri cezbetmektedir ve yüzyıllardır şifa kaynağı olarak kullanılmaktadır. Tıbbi bitkilerin farmakolojik etkileri bitkilerin içeriğinde bulunan biyoaktif bileşikler olarak bilinen ikincil metabolitlerden kaynaklanmaktadır. Bitkinin aktif bileşenleri olan ikincil metabolitler, insan vücudunun metabolizmasını ve fizyolojik fonksiyonlarını düzenleyici ve bağışıklığı destekleyici etkiler sağlayabilmektedir. Polifenoller bitkilerin ikincil metabolitleridir ve flavonoidler altı temel grupta incelenen büyük bir polifenol ailesidir. Flavonoid alt basamağı olan antosiyanidinler doğada serbest halde bulunmamakla beraber bir sakkaritle kompleks oluşturarak antosiyanin biçimiyle karşımıza çıkmaktadır. Antosiyaninler pH'larına bağlı olarak kırmızı, mor, mavi veya siyah görünebilen suda çözünür koful pigmentlerdir. Antosiyaninlerin bağırsak mikrobiyotasını oluşturan faydalı bakterilerin sayısını arttırıp zararlı bakterilerin sayısında azalma sağlayarak obezite, kardiyovasküler hastalıklar (KVH), diyabet ve kanser gibi hastalıkların tedavisinde veya önlenmesinde rolü olduğu bilimsel araştırmalarla desteklenmiştir. Bu bölümde antosiyaninlerin bağırsak mikrobiyotasını düzenleyici etkilerinin araştırıldığı gerek klinik araştırmalar gerekse *in vitro* hücre kültürü ve *in vivo* hayvan temelli araştırma sonuçlarının derlemesi yapılmıştır.

2. GENEL BİLGİLER

2.1.Antosiyaninlerin Kimyasal Yapısı

Antosiyaninler flavonoidlerin polifenol sınıfına dâhil edilen biyoaktif bileşiklerdir. Doğada flavilyum tuzlarının glikozitleri olarak bulunmaktadır. Glikozitin aglikon kısmına sıklıkla antosiyanidin adı verilmektedir. Genellikle doğada serbest halde bulunmayan antosiyanidin sakkaritlerle kompleks oluşturarak antosiyanin biçiminde bulunmaktadır. Antosiyanidinlere farklı sakkaritlerin glikozidik olarak bağlanması ile farklı antosiya-

BÖLÜM 5

YOĞUN BAKIM ÜNİTESİNDE YATAN HASTALARDA ANTİMİKROBİYAL İLAÇLARIN FARMAKOKİNETİK PROFİLİNDEKİ DEĞİŞİMLER

Ahmet ÇAKIR[1], Hasan MEMİŞ[2]

1 Arş. Gör., İnönü Üniversitesi Eczacılık Fakültesi Klinik Eczacılık Anabilim Dalı, ORCID ID: 0000-0002-9843-1604
2 Arş. Gör., İnönü Üniversitesi Eczacılık Fakültesi Klinik Eczacılık Anabilim Dalı, ORCID ID: 0000-0001-7158-1795

GİRİŞ

Yoğun bakım; akut, hayatı tehdit eden organ fonksiyon bozukluğu olan veya gelişme riski taşıyan hastaların kapsamlı yönetimi üzerine yoğunlaşmış multidisipliner ve meslekler arası bir uzmanlık alanıdır (Marshall et al., 2017). Yoğun bakım üniteleri (YBÜ) diğer servislere kıyasla hastanede kalış süresi ve mortalite açısından daha yüksek bir orana sahiptir (Molina, Seow, Heng, Chong, & Ho, 2014). Yapılmış bir çalışmada, mortalite oranlarının medikal YBÜ'de %7, cerrahi YBÜ'de %8,5 ve kardiyak YBÜ'de ise %8,2 kadar olduğu gösterilmiştir (Siddiqui, 2015). YBÜ'de saptanan bu mortalite oranlarının büyük bir çoğunluğunu yatan hastalarda görülen enfeksiyonun kendisi ve enfeksiyon kaynaklı sepsis durumunun kötüleşmesi oluşturmaktadır.

1. Yoğun Bakım Ünitesinde Yatan Hasta Profili

YBÜ'de yatan hastalarda mortalite oranları %20,5 ile %43 arasında değişmekte olup en sık ölüm nedenleri arasında sepsis, kardiyopulmoner arrest, pnömoni ve aritmiler yer almaktadır (Akkoc et al., 2017). Yoğun bakım ünitesinde yatan hastalarda ortaya çıkan şiddetli sepsis ve septik şok, morbidite ve mortalite ile yüksek oranda ilişkilidir (Angus et al., 2001). Şiddetli sepsis, organik işlev bozukluğu, hipoperfüzyon veya hipotansiyon ile ilişkili bir tabloyken; septik şok, perfüzyon anormalliklerinin varlığında yeterli sıvı resüsitasyonuna rağmen sepsis kaynaklı hipotansiyonun olması olarak tanımlanır (Srzić, Nesek Adam, & Tunjić Pejak, 2022). Şiddetli sepsisin geliştiği hastaların dörtte biri hastanede kaldıkları süre boyunca ölüm riski ile karşı karşıya iken; septik şok, %50'ye yaklaşan en yüksek ölüm oranıyla ilişkilidir (Mayr, Yende, & Angus, 2014). Sepsis ve septik şoklu kritik hastalarda erken ve uygun antimikrobiyal ilaç seçimi mortaliteyi azaltan en önemli faktörlerden biridir (Garnacho-Montero et al., 2003). Antimikrobiyal tedavi YBÜ'de görülen sepsis ve septik şok hastalarının yönetiminde tedavinin temel taşını oluşturmaktadır. Altta yatan nedene yönelik olarak en kısa sürede antimikrobiyal tedaviye başlanmalıdır. Kılavuzlar tarafından olası septik şoku olan veya sepsis olasılığı yüksek olan yetişkinler için, antimikrobiyallerin derhal ve ideal olarak tanı konulduktan sonraki 1 saat içinde uygulanması önerilmektedir (Evans et al., 2021). Kritik hastalarda enfeksiyon yönetiminin başarısında çeşitli faktörler rol alır. Ampirik antimikrobiyal tedavinin yeterliliğine ek olarak; reçete edilen doz, yol ve uygulama şekli gibi dozlamaya ilişkin parametrelerin de optimize edilmesi çok önemlidir (Póvoa, Moniz, Pereira, & Coelho, 2021). YBÜ'de görülen enfeksiyonlar en kısa sürede tespit edilip bunlara yönelik en uygun ampirik antimikrobiyal tedavi başlatılmalıdır.

1. Kanser Hastalığı ve Tedavisi

Genetik ve çevresel etkenler nedeniyle hücrelerin kontrolsüz bir şekilde bölünerek çoğalması ile karakterize edilen bir hastalıktır. Kanser hastalığının temelini, hücrede meydana gelen mutasyonların kademeli olarak bir araya gelmesidir. Kanserli hücreler metastaz yapabilme yeteneğine sahiptir [1].

Dünya Sağlık Örgütünün (DSÖ) bildirdiği üzere, kanser dünya üzerinde ölüme sebebiyet veren hastalıklar içinde ikinci sırada yer almaktadır [2]. Literatürde verilen verilerde, ayrıca 2018 yılında dünya genelinde kanser hastalığına sahip kişi sayısı 18.1 Milyon olarak ve hastalığa bağlı ölüm sayısının ise 9.6 milyon olarak rapor edilmektedir. Ayrıca, hastalığın global insidansı Şekil 1.1. verildiği gibi gösterilmektedir.

Şekil 1.1. *Kanser Hastalığının 2018 yılında global insidansı [3]*

Kanser hastalığa neden olabilecek faktörler literatürde majör ve minör risk faktörleri olmak üzere sınıflandırılmaktadır [4]. Bahsedilen faktörler Tablo 1.1'de gruplandırılarak verilmektedir.

GİRİŞ

Bu bölümde A, C ve E vitamininin tarihçesi, kimyasal yapısı, kaynakları, günlük gereksinimi, eksiklik durumları, metabolizması ve antioksidan özellikleri incelenmiştir. Önemli antioksidan özelliklere sahip bu vitaminlerle ilgili derlenen bilgilerin ileride yapılacak daha geniş kapsamlı araştırmalara ışık tutacağı düşünülmektedir.

A VİTAMİNİ

A Vitamininin Tarihçesi

İlk tanımlanan vitaminlerden biri olan A vitamininin vücut üzerindeki etkileri hala tam olarak çözülebilmiş değildir. Yaklaşık 3500 yıl öncesinde ortaya çıkan çeşitli hastalıkların sebebinin A vitamini eksikliği olduğu düşünülmüştür (Günlemez ve ark., 2003). A vitamininin eksikliği sonucu ortaya çıkan gece körlüğü eski Mısır kaynaklarında bulunmaktadır. Kornea üzerine yaptığı yıkımlar 18-19. yüzyıldan itibaren fark edilmiştir. Yirminci yüzyılın başlarında ise, yetersiz A vitamini alımlarında insan ve hayvan gelişiminde duraksamalar, daha ciddi ve uzun süren iltihaplanmalar olduğu gözlenmiştir (Olson, 1988). MacCollum ve Davis 1913 yılında A vitamini bulmuştur. Karotenin A vitamin prekürsörü olduğu 1930 yılında Moore tarafından keşfedilmiştir (Lanska, 2009). A vitamininin biyokimyasal yapısı 1960-1980 yılları arasında aydınlatılmış, daha sonraki yıllarda ise tüm dünyada eksikliğinin tanımı ve sonuçlarına yönelik çalışmalar üzerinde durulmuştur (Sommer, 2008).

A Vitamininin Kimyasal Yapısı

A vitamini yağda eriyen vitaminlerden biridir. Yağda eriyen vitaminler adipoz dokuda ve karaciğerde birikme eğilimindedir. A vitamini aktivitesi gösteren moleküller temel olarak iki gruptur. Birinci grup retinoidlerdir. Bunlar A vitamini aktif formu olan retinol, aldehit formu olan retinal ve asidi olan retinoik asittir. İkinci grup karotenoidlerdir. Bu gruba provitamin A da denir ve A vitamini prekürsörleridir. En bilinen örneği β-karoten'dir (Champe, 1997) (Şekil 1a, 1b, 1c, 1d).

1. GİRİŞ

Tüm hücresel yaşam türleri (ökaryotlar, bakteriler ve arkeler), virüs, plazmid ve transpozon gibi hareket eden farklı genetik elemanlarının istilası için potansiyel hedeftir. Genellikle genetik bilgilerini bağımsız olarak kopyalayamadığından, bu elementlerin çoğalmaları için uygun bir konağı istilası mutlak bir gerekliliktir (Van der oost ve ark., 2009).

Doğada virüsler yaygın ve potansiyel risk faktörü olsa da, mikroorganizmalar rutin olarak yaşam döngülerine devam eder ve bazen düşmanca ve rekabetçi ortamlarda gelişir. Transdüksiyon, konjugasyon ve transformasyon yoluyla ekzojen DNA'ya sürekli maruz kalmak; mikroorganizmaları *"yabancı"* DNA'yı tanımasına, *"kendi"* DNA'sından ayırt etmesine ve bir dizi savunma mekanizması geliştirmeye zorlamıştır. Bu sistemler genetik bütünlüğü korur. Ancak, zaman zaman ekzojen DNA'nın alımına ve çevreye adaptasyon için avantajlı genetik materyalin korunmasına izin verilir (Horvath ve ark., 2010). Prokaryotlar, prokaryotik virüslere (fajlar) karşı bir dizi savunma stratejisi geliştirmeyi başarmışlardır. Bakterilerin virüsler tarafından tanınmaktan kaçınmak için reseptörlerini gizledikleri veya modifiye ettikleri adsorpsiyon (tutunma) baskılanması örnek olarak verilebilir. Bakteriler ayrıca restriksiyon modifikasyon sistemi (RMS) gibi diğer antiviral mekanizmalarıda kullanır. RMS, bakteriyel DNA'yı sürekli olarak metillemektedir. Metilasyon, endojen DNA'yı nükleolitik bölünmeden kurtarırken yabancı metillenmemiş DNA, RMS restriksiyon endonükleazlar ile temizlenir (Al-Attar ve ark., 2011).

Adsorpsiyonun önlenmesi, enjeksiyonun engellenmesi ve abortif enfeksiyon gibi bazı stratejiler virüslere karşı etkilidir. RMS ve şekere özgü olmayan nükleazların kullanımı gibi diğer savunma sistemleri özellikle istilacı nükleik asidi hedefler (Horvath ve ark., 2010). Konakçı tarafından viral enfeksiyon döngüsünün bir aşamasına müdahale etmeyi amaçlayan her bir yenilik, sonunda savunma sistemine karşı koymayı amaçlayan virüsün bir yanıtına yol açacaktır. Bu nedenle, bir organizmanın eşzamanlı olarak çalışan tamamlayıcı korunma sistemlerine sahip olması yararlı görünmektedir (Van der oost ve ark., 2009).

Konak-virüs etkileşimlerini anlamada yeni bir tür mikrobiyal savunma sistemi keşfedilmiştir (Al-Attar ve ark., 2011). Düzenli aralıklarla bölünmüş kısa palindromik tekrar kümeleri (CRISPR) tabanlı savunma sistemi, birçok bakteri ve arkeyi istilacı konjugatif plazmidlere, transpozonlara ve virüslere karşı korur (Brouns ve ark., 2008). CRISPR, çoğu arke (~%90) ve bakteri (~%40) genomunda bulunan bir DNA tekrar dizileri ailesini temsil eder. CRISPR lokusları tipik olarak aralayıcılar (çoğunlukla yakalanan viral ve plazmid sekanslarının segmentlerine karşılık gelir) adı verilen değişken sekansların uzatılmasıyla ayrılan bitişik olmayan doğrudan

BÖLÜM 9

BESLENMEDE BOR; CANLILAR İÇİN FİZYOLOJİK ÖNEMİ VE BESİN TAKVİYESİ OLARAK KULLANIMI

Mükerrem ŞAHİN[1]

1 Ankara Yıldırım Beyazıt Üniversitesi Enerji sitemleri Mühendisliği Bölümü
Ankara-Türkiye Orcid:0000-0002-7217-5059

GİRİŞ

1.Bor

Bor (B), hem yaşamın kökeninde hem de evriminde rolü olan kimyasal bir element olarak ,bitkilerde bazı bakterilerde, mantarlar ve alglerde temel bir mikro besin maddesi olarak kabul edilir. Biyolojik rolü açıkça tanımlanmadığı için insanlar ve hayvanlar için temel bir mikro besin olarak sınıflandırılmamıştır (1).

Büyüme ve gelişme için gerekli olan bor , vücudumuzda yürüyen bir çok metobolit faaliyetler için önemli olup için çeşitli oranlarda gereksinim duyulmaktadır. duyulmaktadır (2). Bu nedenle bor, kalsiyum metabolizmasında , kemik oluşumunda, enerji ve sindirim metabolizmasında, bağışıklık sisteminde, cilt oluşumunda,beyin fonksiyonlarında ve D vitamini bağlanmasında, östrojen dahil steroid hormonlarının düzenlenmesinde oldukça önemli etkileri vardır (1,4,5). Omurgalılarda borlar, yapısal özellikler ve temel fonksiyonların yürütülmesi için mutlak gereklidir (3). Bu özellikler, insanlarda özellikle romotoid artrit, osteoporoz süreçleri, kanser yakalanma ve koroner kalp hastalığı gibi belirli rahatsızlıkları azaltmaya önemli derecede yardımcı olmaktadır. (4,5). Ayrıca, kalsiyum, D vitamini ve magnezyum ile etkileşimleri sebebiyle farklı organlar üzerinde etkisi olan bor; tibbi amaçlı ilaçlarda kullanıldığı gibi beslenme ile takviye edici gıda olarak da üretilmekte ve bazı ilaçların içeriğinde bulunmaktadır (6-8).

1.1 Mikroorganizmalarda ve Bitkilerde Bor Gereksinimi

Bor, çeşitli biyolojik işlevleri yerine getiren tüm canlı organizmaların filumlarında bulunur. Çalışmalar sonucunda, bor içeren bileşiklerin bazılarının, ilaç sanayinde antibiyotik olarak da kullanılmaktadır. Özellikle ilaç sanayi için sentezlenmiş, bortezomib, tavaborol, benzaksoborol gibi isimlerle piyasaya sunulan bazı ilaçların hastalıkların tedavisinde kullanılmaya başlanması önemli bir aşamadır (12,13). Son zamanlarda, iyi korunmuş Jura kırmızı algleri Solenopora jurassica'da borolitokromlar içeren ve bu onların benzersiz renklerinden sorumlu olan özel bir bor bileşikleri grubu bulunmuştur. Borolitokromlar, fenolik kısımlara sahip karmaşık spiroboratlardır (borik asit esterleri) ve ayırt edici bir fosil organik pigmentler sınıfını temsil ederler (14). Bu gen ayrıca bazı bakteri, mantar ve ökaryotlarda da bor maruziyetinde aktive olmaktadır (15). Azot döngüsünde yer alan Azotobakter'in de bu aktivite için bora gereksinimi vardır. Mavi-yeşil alg gibi bazı türlerin ve Frankia cinsi mikroorganizmaların da büyümeleri için mutlaka bora ihtiyaç duydukları da bilinmektedir. İlave olarak borun, Mavi-Yeşil alglerde normal hücrelerden daha büyük ve saydam görünüşlü, havanın serbest azotunu fiske edebilen özel hücreler olan heterosistlerin glikolipidleri ile etkileşime geçtiği ve stabilize ettiği belirtilmiştir (16).

Bor, sadece omurgalılar için değil aynı zamanda bitkilerin büyümesi ve gelişmesi için de önemlidir. Su ve toprağın bor içermesi, tarımsal üretimde önemli bir faktördür (17). Bor, bitki hücre duvarı oluşumu ve stabilitesi, biyolojik membranların yapısal ve fonksiyonel bütünlüğünün korunması için önemli ayrıca , şeker ve karbonhidrat metabolizması ile fenol ve oksin metabolizması, kök uzama ve nükleik asit metabolizması, nitrojen fiksasyonu bitki üremesi, polen tüpü büyümesi ve polen çimlenmesi, tozlaşma, tohum oluşumu ve hastalık direnci için gereklidir (18, 19).

Boratlar ayrıca hidroksil gruplarına sahip biyolojik bileşiklerle de bağlantı oluşturabilirler. Borun bitkilerdeki ana işlevlerinden biri, Ramanogalakturonan II (RGII) ile ester yapma kabiliyeti nedeniyle tarif edilmiştir (20). Bu bor esterin oluşturulması, gerilme mukavemeti ve hücre duvarı geçirgenliğinde (21) anahtar görevi gördüğü için hücre duvarı işlevi ve yapısı için önemli bir rol oynamaktadır (22). Borun plazma zarının fonksiyonlarını ve yapısını muhafaza etmek için gerekli olduğuna dair kanıtlar saptanmaktadır (22). Glikolipidler ve glikoproteinler gibi hidroksillenmiş iyonlara sahip birkaç zar molekülünün, plazma zarlarında olası bir boron etkisi için iyi yarışmacılar olduğu ileri sürülmüştür (24). Ancak bu borat komplekslerinin mekanizması henüz aydınlatılamamıştır. Bu nedenle borun, plazma zarlarındaki potansiyelini yalnızca cis-diol gruplarına sahip zar moleküllerini hafifleterek değil, aynı zamanda zar işlevi ve yapısında iç içe geçmiş genlerin ekspresyonunu modüle ederek de ortaya koyabileceği iddia edilmiştir.

Özetle bitkilerde üreme büyüme soğuğa karşı uzun ömür sağlamada bor oldukça kritik görev yapmaktadır.Don vuran bölgelerde meyve ağaçlarına verilen bor gübreleri ile dona karşı dirençli olduğu görülmüştür.Bununla birlikte çiçek tutma oranının arttığı ve meyveye dönme miktarının yükseldiği de gözlemlenen sonuçlar arasındadır.

1.2 Borun Hayvanlarda ve İnsanlardaki Rolü

Borun, hayvan ve insan sağlığı için son derece önemli olduğu son yıllarda yapılan çalışmalarla gösterilmiştir. Çeşitli metebolit faaliyetlerde kullanılan özel reaksiyonların sentezinde v rol oynayan bor özellikle bir hidroksil grubunu bir organik bileşiğe sokan kimyasal bir işlem olan hidroksilasyon reaksiyonlarına katıldığı en önemli bulgulardandır. (7). Bor, otoimmun rahatsızlıklardan biri olan artrit için etkili bir tedavi yöntemlerden biridir. Özellikle borun kemikte, eklemlere ve kıkırdakta etkili bir şekilde rol aldığı ve kalsiyum bağlanmasını etkin bir şekilde artırdığı , vakaların %90-95'inde görülen kemik gelişimindeki eksikliklerin giderilmesi hususunda önemli katkılar sunmaktadır. Onkoloji hastalarının tedavisinde, bor doğrudan desteke olarak kullanılabildiği gibi özel bir teknoloji olan B10 izotopu içeren özel bir bor bileşiğine nötron bombardımanı yapılarak

HYPERİCUM CİNSİ ÜZERİNDE FARMAKOLOJİK VE FİTOKİMYASAL GÜNCEL ARAŞTIRMALAR

Mehtap BUZ[1], Leyla GÜVEN[2]

1 Atatürk Üniversitesi, Eczacılık Fakültesi, Farmasötik Botanik Anabilim Dalı, Erzurum
2 Dr. Öğretim Üyesi, Atatürk Üniversitesi, Eczacılık Fakültesi, Farmasötik Botanik Anabilim Dalı, Erzurum

Giriş

Geleneksel tıp, binlerce yıldır şifalı bitkilerden yararlanmıştır. İnsanlık, bitkileri doğru şekilde kullanmayı deneyim ve gözlem yoluyla öğrenmiş ve kullanımlarına ilişkin geleneksel bir kültür oluşturmuştur. Son yüz yılda, bilimsel ve teknik ilerleme ve özellikle bu bitkilerin birçoğunun farmakognozik çalışmaları, çok sayıda yeni molekülün ve bunların etki mekanizmalarının keşfedilmesine olanak sağlamıştır. Modern bilimsel araştırmalar, bu moleküllerin önemini ve ekstrelerin içeriğindeki tüm bileşenlerinin sinerji içinde çalıştığını göstermektedir. Buna paralel olarak da, üretim kalite kontrolü, yeni moleküllerin ve standart ekstrelerin keşfedilmesine olanak sağlamıştır (Fürst ve Zündorf, 2015).

Dünya Sağlık Örgütü (DSÖ), şifalı bitkilerin tedavi edici kaynaklar olarak önemini kabul etmiş ve fitoterapinin kapsamını genişletmek ve yeni ilaçların geliştirilmesi için geleneksel olarak kullanılan bitkiler hakkında bilgi edinilmesini teşvik etmiştir (Leite vd., 2021). Fitoterapötik ürünler, şifalı bitkilerden elde edilir ve aktif bileşenleri, bazen yan etkiler gösterseler de semptomları hafifletebilir ve hatta hastalıkları tedavi edebilir (Ferreira vd., 2014).

Hypericum (*Clusiaceae* = *Guttiferae*) cinsi, Antartika hariç tüm dünyada bulunan yaklaşık 500 türden oluşur. Bu bitkiler, özellikle ılıman bölgelerde ve tropik bölgelerdeki yüksek dağlarda olmak üzere çeşitli habitatlarda bulunan çok yıllık bitkilerdir (Zhang vd., 2020). *Hypericum* cinsinin Türkiye florasında 98 türü, 119 taksonu yer alır, bunlardan 49'u endemiktir. Endemiklik oranı %41.18'dir (Şenkal ve Uskutoğlu, 2021).

Akdeniz, İran-Turan ve Avrupa-Sibirya fitocoğrafik bölgesinde yer alan, zengin bir floristik ve faunistik çeşitliliğe sahip olan Türkiye, %31'i bölgeye özgü 12.476 farklı bitkiye ev sahipliği yapmaktadır (Özkök vd., 2016).

Hypericum türleri farklı tıbbi özellikleri nedeniyle, geleneksel tıpta sıkça kullanılmaktadır. Türkiye'de halk arasında infüzyon (demleme), dekoksiyon (kaynatma), oleat (yağ içinde bekletme) veya merhemi hazırlanarak birçok hastalıkta dahilen ve haricen kullanılmaktadır (Şenkal ve Uskutoğlu, 2021). Ayrıca *Hypericum* türleri, Avrupa, Amerika, Afrika ve Asya'da halk arasında astrenjan, ateş düşürücü, idrar söktürücü, antiflojistik, analjezik, antidepresan, antikanser, antienflamatuvar, antimikrobiyal, nöroprotektif olarak kullanılmaktadır (Vincent vd., 2021; Oliveira vd., 2016). *Hypericum* türlerinin yağ içinde yapılan maseratları, dışarıdan, küçük yanıklar, yaralar, cilt iltihabı ve sinir ağrısını tedavi etmek için de kullanıldığı bildirilmektedir (Oliveira vd., 2016).

Hypericum türlerinde başlıca naftodiantronlar (hiperisin ve psödohi-

SIÇANLARDA OLUŞTURULAN DENEYSEL YARA MODELİNDE ANKAFERD'İN KARDİYOVASKULER SİSTEMDEKİ ETKİSİNİN HİSTOLOJİK YÖNTEMLERLE BELİRLENMESİ

Erhan ŞENSOY[1]

1 Dr. Öğretim Üyesi, Karamanoğlu Mehmetbey Üniversitesi Sağlık Bilimleri Fakültesi, ORCID:0000-0003-2989-459X, sensoyerhan42@gmail.com; erhansensoy@kmu.edu.tr

GİRİŞ

Herhangi bir fiziksel ya da kimyasal etken nedeniyle doku bütünlüğün bozulması "yaralanma" olarak tanımlanır (Parsak vd. 2007). Yaralı dokuda en sık görülen semptomlardan birisi kanamadır. Günümüzde insanlarda meydana gelen kanamaları durdurmak için kullanılan pek çok topikal ve sistemik ajan vardır. Bu sistemik ajanların kanamayı durdurma süreleri ile arter ya da vena kanamalarındaki etki düzeyleri de aynı değildir. Tarih boyunca Türk tıbbında, genel cerrahi kanamalarda ve diş eti yaralarındaki kanama durumlarında bazı bitkiler kullanılmıştır. Ankafer Blooding Stoper (ABS); Timus vulgaris, Glycyrrhiza glabra, Vitis vinefera, Alpinia officinarum ve Urtica dioica bitkilerinin kurutulmuş kök ve yapraklarının çeşitli oranlarda karışımından oluşan, katkı maddesi içermeyen, steril ve antibakteriyel bir hemostatik ajandır (Pamuk vd. 2016). Başlıca kullanım alanları; acil müdahale gerektiren dış kanamalar, dermal kanamalar ve diş eti kanamalarıdır (Goker vd. 2008, Akkoç vd. 2009, Öner vd. 2010; Gül ve Günay 2022). ABS, anjiogenezi, kan hücrelerinin oluşumunu ve endotel proliferasyonunu stimule eder (Boran vd. 2018). Enkapsüle protein ağının oluşumunu sağlar, eritrositlerle birlikte tüm kan hücreleri bu protein ağına katılarak kanama bir saniyeden kısa sürede durdurulur (Turk vd. 2017).

Yaranın iyileşmesine yardımcı olan tedavi sürecinde; ilaç ve/veya bandaj kullanımı uygulanarak, yara kontraksiyonu ve yaralı bölgede epitelyum oluşumu için uygun ortam meydana getirilir (Akalın vd. 2014; Gül ve Günay, 2020). Yara iyileşmesinde uygulanan tedavi yöntemlerinin ana hedefi; yara iyileşmesinde rol alan enflamatuvar hücreler, trombositler ve hücre dışı matriks gibi yapıları etkileyerek ideal bir nedbe oluşumunu sağlamaktır (Satar vd. 2014). Bu tedavi yöntemlerinden biri olan yara örtüleri; yarayı enfeksiyonlara karşı koruyan, aynı zamanda iyileşme sürecine katkı sağlayan, hücre çoğalmasına uygun ortam oluşturabilen, antibakteriyel özellikte olan medikal tekstil ürünleri olarak bilinir. Yara örtülerinin yapısında bulunan nanolifler; yüksek gözenekli ve büyük yüzey alanına sahip olan, doğal hücre dışı matriks yapısını (Extra Cellular Matrix-ECM) taklit edebilen, ilaç taşıyıcı olarak kullanılabilen özelliktedirler (Li vd. 2017). Nanolifler bu özelliklerinden dolayı; doku iskeleleri, yara örtüleri, yapay damar gibi medikal alanlarda kullanılır. Doku iskeleleri, ilaç salınım sistemleri ve yara örtüleri; biyouyumlu ve biyobozunur olmalı, optimal parçalanma hızına sahip, doku ile uyumlu yapısal ve mekanik özellikte, yüksek emicilikte ve antimikrobiyal özellikte olmalıdır (Ambekar ve Kandasubramanian, 2019; Bozkaya vd. 2022). Yara örtüsü üretiminde sıkça tercih edilen elektro-eğirme yöntemi, polimer esaslı jellerin elektrik alan etkisiyle nano çapta elyaf üretim tekniğidir (Alharbi et al., 2018; Alipur, 2019). Elektro-eğirme yöntemi ile 10 nm-500 nm yarıçaplı lifler üretilebilmektedir (Geetha vd., 2022). Bu yöntemde hammadde olarak doğal ya

PSİKİYATRİ HEMŞİRELİĞİNDE AİLE VE KÜLTÜR ETKİLEŞİMİ

Yasemin ÖZEL[1]

1 Öğr. Gör. Dr., Kastamonu Üniversitesi, Tosya MYO, Sağlık Bakım Hizmetleri Bölümü, ORCİD ID: 0000-0001-8920-8825, yaseminkeskin1@gmail.com

GİRİŞ

Her birey bir aile ortamında dünyaya gelmektedir. Bu ortam, yaşama dair ilk deneyimlerin, ilişkilerin ve duyguların temelinin atıldığı yerdir. İnsan fiziksel, ruhsal ve sosyal olarak daha geniş sosyo-kültürel bağlamda aile yaşam döngüsü boyunca gelişmekte ve şekillenmektedir. Ailede yaşam boyunca karşılaşılan tüm sorunlar, geçmişin biçimlendirici seyrinden, içinde bulunduğu dönemden kaynaklanmakta ve geleceğini şekillendirmektedir. Dolayısıyla, aile yaşam döngüsü ve bağlı bulunduğu daha geniş sosyal bağlam, bireysel kimlik ve ruh sağlığını şekillendiren doğal çerçevedir (McGoldrick, Carter, & Preto, 2014, s. 1).

Kültür, aynı dili konuşan bir grup insanın için ortak değerlerine, inanışlarına, davranış normlarına ve uygulamalarına atıfta bulunan geniş yelpazeli bir terimdir. Bireyin davranış ve düşünce şeklinin çoğu çocukluk döneminde öğrenilmesinden dolayı otomatik gelişebilmektedir. Kendi kültüründe kabul edilebilir ve beklenilen davranışları öğrenmek, erken çocukluk döneminde başlayarak sosyalleşmeye kadar gerçekleşmektedir (Shives, 2008, s. 35). Kültürün nesilden nesile aktarılmasında gelenek, inanç ve değerlerin etkisi oldukça büyüktür. Gelenekler, öğrenilmesi ve tanınması kolay olan belirli koşullar altında alışılmış uygulama yöntemleridir. Eğer bayan bir hasta muayene olmak için doğum masasına çıkarken çekiniyorsa ya da erkek bir hasta bayan hemşireye enjeksiyon yaptırmakta direniyorsa, içinde bulundukları kültürün özelliklerini sergiledikleri söylenebilir (Bolsoy & Sevil, 2006, s. 81).

Aile, geleneksel uygulamaların ve değerlerin geliştirilmesinde derin bir etkiye sahiptir. Fakat medya, siyaset, din, okul, ekonomi ve yaşanılan toplumun da kültür üzerinde önemli bir etkisi vardır. Örneğin, kayıp ve yas tüm bireyler için acı vericidir, ancak bu deneyimin ifade ediliş biçimi neredeyse tamamen kültüre bağlıdır (Shives, 2008, s. 35). Alt kültür, daha büyük bir kültürde var olan daha küçük bir gruptur. Bir alt kültürün üyeleri cinsel yönelim, dini ve manevi inançlar, sosyoekonomik durum, etnik köken, meslek, ırk, cinsiyet, yaş, hatta sağlık durumu gibi ortak özellikleri olabilir. Bu nedenle, bir birey hem toplumdan hem de çoklu alt kültürden etkilenebilir. Bu nedenle, hastalığa verilen anlam, uyum şekilleri, baş etme yöntemleri ve iletişim biçimi kültüre bağlı olarak değişebilen özelliklerdir. Dolayısıyla, hastalıkların meydana gelmesinde ve algılanmasında kültürün önemli etkilerinin olduğu söylenebilir (Shives, 2008, s. 35; Bolsoy & Sevil, 2006, s. 81). Hasta ve hemşire aynı kültüre üye olduğu gibi farklı kültürlere de sahip olabilirler. Bu nedenle, psikiyatri hemşireleri aileyi ve hastayı etkileyen faktörlere ve davranışları üzerindeki etkilerine karşı duyarlı olmalıdır.

NÖRAL DOKU MÜHENDİSLİĞİ ALANINDA NANOTIP VE BİYOMALZEME YAKLAŞIMLARI

İlyas ÖZÇİÇEK[1]

1 Dr. Öğr. Üyesi, İstanbul Medipol Üniversitesi, Tıp Fakültesi, Temel Tıp Bilimleri Bölümü, Tıbbi Biyoloji Anabilim Dalı, 34815, Beykoz, İstanbul, Türkiye. E-posta: iozcicek@medipol.edu.tr, ORCID: 0000-0002-4495-7395

1. GİRİŞ

Dünya genelinde milyonlarca insanı etkileyen nöral hasarlar, hastaların yaşam kaliteleri üzerinde önemli düzeylerde etkilere sahiptir. Bu yaralanmalar genellikle istihdam edilebilir yaştaki gençleri ve erişkinleri etkilemekte olup, hastalarda kalıcı düzeylerde bilişsel engellilik, motor ve psikotik bozukluklara yol açmaktadır (Taylor et al., 2008; Asplund et al., 2009; Seddighi et al. 2016). Meydana gelen sinir hasarının düzeyine göre hasarlı dokularda pek çok patofizyolojik olaylar ve çeşitli düzeylerde aksonal dejenerasyonlar gerçekleşmektedir. Yetişkin merkezi sinir sistemi (MSS) ile karşılaştırıldığında, periferik sinir sisteminin (PSS) hasar bölgesindeki mikro çevre, aksonal rejenerasyona daha fazla imkan vermektedir. Nispeten kısa mesafelerde ve tipik olarak 5 mm'den az hasarlara sahip aksonlar kendiliğinden iyileşebilmektedir. Bununla birlikte, rejenerasyon gerçekleşse bile aksonların yanlış hedeflere yönlenmesinden kaynaklanan sebeplerle fonksiyonel iyileşme her zaman nihai olmayabilir (Jiang et al., 2010). Merkezi sinir sisteminin kendi inhibitör çevresinden dolayı, nöral rejenerasyon potansiyeli oldukça kısıtlıdır ve fonksiyonel yeniden kazanım son derece zordur (Sensharma et al., 2017). Dolayısıyla, MSS'nin spontan rejenerasyon kapasitesinin sınırlı olması olası tedavi stratejilerini oldukça kısıtlamaktadır. MSS'deki hasarlar etiyolojik açıdan incelendiğinde, nöronlarda ve glial hücrelerde (astrositler ve oligondendrositler) apoptotik ve nekrotik ölümler gerçekleşebilmekte, aksonlar ve miyelin kılıflar zarar görmektedir. İlaveten iskemi, oksidatif hasar ve inflamasyon gelişebilmektedir. MSS tedavisinde kullanılan ilaçlar sadece hastalığın ilerlemesini geciktirmekte olup, kan beyin bariyeri oral ve intravenöz ilaçların etkinliğini azaltmaktadır (Tam et al., 2014). Sinir tedavilerinde, halen altın standart olarak oto greftler tercih edilmektedir. Bu otolog greftler, hastanın fonksiyonel açıdan daha az önemli olan sinir bölgelerinden alınarak hasarlı bölgeye transplante edilmektedir. İkincil cerrahi süreçler gerektirmesi, kısıtlı uzunlukta sinir dokusu alınabilmesi, transplante alanda nöroma oluşum riski ve ekonomik maliyetleri otolog greftlerin dezavantajlarından bazılarıdır (Johnson & Soucacos, 2008; Panseri et al., 2008; Lin et al., 2013). Otolog greftlerde klinik olarak fonksiyonel kazanım % 80 civarında olup, bu durum özellikle uzun defektlerde işe yaramamaktadır (Schmidt & Leach, 2003). Otolog greftlere alternatif olarak kadavralardan elde edilen allogreftlerin ihtiyaç duyulan yerden istenilen uzunlukta alınabilmesi bir avantaj olsa da immün yanıtı bastırmak için 18 aylık uzun bir tedavi süreci gerektirmesi, sekonder enfeksiyon ve tümör gelişim riski gibi bazı dezavantajları da bulunmaktadır (Mackinnon et al., 2001; Barbour & King, 2003).

Nöral doku onarımı ve rejenerasyon stratejileri, doğrudan hastaların yaşam kalitelerini etkilediği için üzerinde oldukça yoğun olarak çalışı-

LİF TÜKETİMİNİN GEBELİKTE KORTİZOL SEVİYELERİ VE HPA AKSINA ETKİSİ

Dursun Alper YILMAZ[1]

1 Araştırma Görevlisi, Uludağ Üniversitesi, alper96@outlook.com, 0000-0001-8096-5504

Giriş

Zararlı bir uyaranın algılanması sırasında savaş ya da kaç tepkisine bir adaptasyon olarak gelişen stres, bazı koşullar altında (sinir, endokrin ve bağışıklık sistemleri dahil) zararlı olabilecek bir dizi fizyolojik tepkiyi uyarır. Bu tepkiler arasında hipotalamus- hipofiz- adrenal aksının hiperaktivitesi, depresif hastalarda en yaygın görülen nörobiyolojik değişikliklerden biridir. Özellikle gebelikte depresyon, ruh sağlığını tehlikeye atan sinsi bir halk sağlığı sorunudur. Ciddiye alınmadığı durumlarda intihara kadar giden vakalar ile karşılaşılabilmektedir. Doğum öncesi depresyonun olumsuz sonuçları yalnız annede değil, ileri dönemde çocuk üzerinde de görülmektedir. Gebeliğe bağlı depresyon, genellikle birden çok sebebe bağlı olup birçok farklı fizyolojik etkenle ilişkilidir. Hamilelik sırasında ortaya çıkan fizyolojik kaymalar, maternal stres koruma mekanizmasında hipotalamus- hipofiz- adrenal aksı düzensizliği ve kortizolün aşırı salgılanması gibi değişikliklerin oluşmasına sebep olur. Vücudun strese gösterdiği tepkiyle ilişkili olan aşırı kortizol salınımı, gebelik süresince görülen depresif belirtilerle ilişkilidir. Yakın zamanda yapılan çalışmalar belirli diyet etkenlerinin özellikle diyet liflerinin, stres hormonunu zayıflattığını vurgulamaktadır. Vücuda alınan diyet lifi, bağırsak bakterileri vasıtasıyla sindirilir ve kısa zincirli yağ asitlerinin ortaya çıkarılmasını sağlar. Söz konusu metabolitlerin hipotalamus- hipofiz- adrenal aksı başta olmak üzere pek çok değişik nörolojik fonksiyonu etkilediği düşünülmektedir. Bu derleme makale, kortizol salınımnda rol oynadığı düşünülen lif tüketiminin yaptığı değişiklikleri belirlemeyi hedeflemektedir.

Fizyolojik Sistem Hakkında

Depresyon, kalıcı olan ve savunma mekanizmaları tarafından kontrol edilemeyen ciddi bir stres türüdür (Orta, Gelaye, Bain, ve Williams, 2018). Dünyadaki 10 kadından birinin gebelik sırasında depresyonla mücadele ettiği bilinmektedir. Gelişmekte olan ülkelerde ise, bu oranın yaklaşık 1,5 kat daha yüksek olduğu bulunmuştur (Sidhu, Sidhu, Kaur, Lal, ve Sangha, 2019). Gebelik sırasında veya daha sonra gelişen depresyon, antepartum depresyon olarak adlandırılır. Sadece gebelik sırasında anne sağlığı üzerinde zararlı etkilere neden olmakla kalmaz, aynı zamanda bebekte de bilişsel ve sosyo-duygusal ilerlemeyi engeller (Orta vd., 2018; Osborne vd., 2018; Rackers, Thomas, Williamson, Posey, ve Kimmel, 2018; Szpunar ve Parry, 2018). Vücutta fiziksel veya duygusal stres oluştuğunda hipotalamus-hipofiz-adrenal aksı (HPA aksı) yani beynin hipotalamus bölgesi, hipofiz bezi ve böbreküstü bezlerinden oluşan aks aktive olur (Gropper, Smith, ve Grodd, 2019). Şekil 1. HPA ekseninin hiperaktivitesi, epilepsi, anksiyete ve depresyon gibi duygudurum bozukluklarına yoğun şekilde dâhil olan beynin temporal lobunun yapısını ve işlevini olumsuz yönde etkiler (Basu, Maguire, ve Salpekar, 2021). Bu minvalde oluşan hormonal değişimler,

Nigella Sativa Hakkında Genel Bilgi

Nigella Sativa yani çörek otu (Ranunculaceae ailesinden), insanlık tarihi boyunca dünyanın birçok yerinde kullanılmış ve kullanılmakta olan bir bitkidir. Ranunculaceae familyasından yıllık çiçekli bir bitki olup çiçekleri narin ve genellikle soluk mavi-beyaz renklidir. Nigella Sativa 5-10 yapraklıdır (Şekil 1). Nigella Sativa, çörek otu haricinde ayrıca siyah kimyon olarak da bilinmektedir. Doğu Akdeniz'in geniş bir bölgesine özgüdür. Kuzey Afrika, güney Avrupa, Hint alt kıtası, Batı-Güneybatı Asya, Mısır, İran, Yunanistan, Suriye, Arnavutluk, Türkiye, Suudi Arabistan, Hindistan ve Pakistan dahil olmak üzere birçok ülkede yetiştirilmektedir. Nigella Sativa, gıda olarak kullanımının yanı sıra tohumu ve tohumundan elde edilen yağı bir çok hastalığın tedavisinde kullanılmış ve hala dünya genelinde kullanılmaya devam edilmektedir.

Şekil 1. *Nigella Sativa bitkisi ve tohumu.*

Yapılan arkeolojik çalışmalardan yola çıkılarak Nigella Sativa'ya M.Ö 1333-1323 yıllarında hüküm süren Mısır'ın 18. hanedan firavunu Tutankamon'un mezarında rastlanmıştır. Tohumun mezara ne amaçla konulduğu ile alakalı bir bilgi olmamakla birlikte ölümden sonraki yaşam ile ilgili olduğu düşünülmektedir. Nigella Sativa'dan elde edilen yağın, Mısır kraliçesi Kleopatra tarafından da sağlık ve güzellik amacıyla kullanıldığı da bilinmektedir.

Dini kaynaklarda, mucize şifalı bitki olarak adlandırılır. Nigella Sativa tohumlarından Hz. Muhammed'in sözlerinde bahsedilmiştir. Hz. Muhammed çörek otu için "Ölümden başka her şeye devadır" diye belirtmiştir. Ek

llk antibiyotik olan penisilin, 1929'da, stafilokok ektiği bir agar petrisinde,Penicillium notatum kontaminasyonu ile stafilokokların inhibe olduğunu gözlemleyen, ancak onu izole edemeyen Sir Alexander Fleming tarafından keşfedilmiştir. Birkaç yıl sonra, 1939'da Ernst Chain ve Howard Florey penisilini izole etmişler ve bu İkinci Dünya Savaşı sırasında bakteriyel enfeksiyonları tedavi etmek için kullanılmıştır. Penisilin 1946 yılında klinik kullanıma girmiştir. Bu keşiflerinden dolayı 1945 yılında Fleming, Chain ve Florey Nobel Ödülü'ne layık görülmüşlerdir. Bu keşif ve geliştirilmesi, modern tıpta devrim yaratmış ve daha birçok doğal antibiyotiğin geliştirilmesinin yolunu açmıştır. İkinci Dünya Savaşı sırasında birçok askerin hayatı penisilin tedavisi ile kurtarılmıştır (Resim-1).

Resim-1.

İlk sentetik antibiyotik

Daha sonra, Gerhard Domagk, antibakteriyel özelliklere sahip sentetik bir molekülün keşfini duyurmuştur. Bileşiğe Prontosil adını vermiştir. Prontosil, sülfonamidler veya sülfa ilaçları adı verilen uzun bir sentetik antibiyotik serisinin ilki olmuştur. Prontosil 1930'larda klinik kullanıma sunulmuş ve idrar yolu enfeksiyonları, pnömoni ve diğer enfeksiyon hastalıklarının tedavisi için kullanılmıştır. Gerhard Domangk, Prontosil'i keşfi nedeniyle 1939'da Nobel Ödülü'ne layık görülmüştür. 1940'ların sonları ve 1950'lerin başlarında, streptomisin kloramfenikol ve tetrasiklin de dahil olmak üzere başka yeni antibiyotikler kullanıma girmiştir. Böylece, antibiyotik-kemoterapi çağı başlamıştır.

Madde Bağımlılığı Nedir

Genel olarak madde bağımlılığı adı ile kullanılan bağımlılık türü, uyuşturucu ve uyarıcı madde bağımlılığını tanımlamaktadır. Bazı durumlarda bu kavram terminolojide uyuşturucu bağımlılığı olarak kullanılıyor olsa da doğrusu; uyarıcı maddelerin de kullanılıyor olmasından ötürü, uyuşturucu ve uyarıcı madde bağımlılığı olarak kullanmaktır. Uyuşturucu ve uyarıcı madde bağımlılığı ile ilgili sıklıkla duyulan diğer terimler ise, maddeye karşı tolerans gelişimi ve yoksunluk belirtileridir (Yoldaş& Demircioğlu., 2020). Son zamanlarda

Bağımlılığı tanımlamak üzere Amerikan psikiyatri derneği, DSM-5 tanı ölçütleri el kitabını yayımlamıştır (American Psychiatric Association., 2013). DSM-5 tanı kriterlerine göre, uyuşturucu ve uyarıcı madde kullanım durumu, madde kullanım bozukluğu olarak tanımlanmaktadır.

En Çok Hangi Maddeler ile Karşılaşılır ve Etkileri Nedir

Dünya Sağlık Örgütünün, Uluslararası Hastalık Sınıflandırması El Kitabı ICD-11'e göre madde kullanım bozuklukları şu şekilde sınıflandırılmıştır (WHO., 2022).

1) Alkol kullanımına bağlı bozukluklar,

2) Esrar kullanımına bağlı bozukluklar,

3) Sentetik kannabinoidlerin kullanımına bağlı bozukluklar,

4) Opiyatların kullanımına bağlı bozukluklar,

5) Sedatif, hipnotik veya anksiyolitiklerin kullanımına bağlı bozukluklar,

6) Kokain kullanımına bağlı bozukluklar,

7) Amfetamin, metamfetamin veya metkatinonu içeren stimulan kullanımına bağlı bozukluklar,

8) Sentetik katinonların kullanımına bağlı bozukluklar,

9) Kafein kullanımına bağlı bozukluklar,

10) Halusinojen kullanımına bağlı bozukluklar,

11) Nikotin kullanımına bağlı bozukluklar,

12) Uçucu inhalanların kullanımına bağlı bozukluklar,

13) MDA'da dahil olmak üzere MDMA (methylenedioxymethamphetamin) ve ilişkili ilaçların kullanımına bağlı bozukluklar,

14) Ketamin ve fensiklidin dahil olmak üzere dissosiyatif ilaçların kullanımına bağlı bozukluklar,

1 Bu çalışma Dokuz Eylül Üniversitesi Fen Bilimleri Enstitüsü Mimarlık Anabilim Dalı Yapı Bilgisi Programı'nda Doktora Tezi olarak kabul edilmiş olan "Pasif ev standartları doğrultusunda mevcut binaların iyileştirilmesi amaçlı bir istatistiksel yaklaşım önerisi" başlıklı tez çalışmasından üretilmiştir.

2 Araş.Gör. Dr., Mimarlık Fakültesi, Mimarlık Bölümü, Dokuz Eylül Üniversitesi, Türkiye, Orcid No: 0000-0002-7227-1788, ahunur.asikoglu@deu.edu.tr

3 Prof.Dr. Mimarlık Fakültesi, Mimarlık Bölümü, Dokuz Eylül Üniversitesi, Türkiye, Orcid No: 0000-0001-6948-9463, mujde.altin@deu.edu.tr

Gelecek nesillere sağlıklı ve sürdürülebilir bir dünya bırakmak iç mevcut kaynakları etkin ve verimli kullanmak, yenilenebilir enerji kaynaklarından yararlanmak, fosil yakıt tüketimini en aza indirmek gerekmektedir. Enerjiyi etkin kullanmak, kaynak tüketimini, atık üretimini, sera gazı emisyonunu azaltırken bunlara bağlı gelişen çevre kirliliğini, küresel ısınmayı azaltıp dünyanın günümüzde ve gelecekte yaşanabilir ve sağlıklı bir yer olmasını sağlayacaktır. Enerjinin etkin ve verimli kullanılması amacıyla farklı disiplinlerde farklı çözüml geliştirilip uygulanmaktadır (Aşıkoğlu, 2022).

Hızlı nüfus artışı dolayısıyla hızlı yapılaşma sonucunda ortaya çıkan ve giderek artan çevresel sorunlar, ekonomik krizler sürdürülebilirlik konusunda çözümler geliştirilmesini zorunlu hale getirmiştir. Son yıllarda yapılan bilimsel çalışmalar ile özellikle Avrupa'da sürdürülebilir, enerjiyi etkin ve verimli kullanan bina tasarımına ilişkin hedefler ve stratejiler geliştirilmektedir.

sı ve ulusal düzeyde, mimarlık alanında hem yeni yapılacak binalarda hem de mevcut binala ihtiyacını en aza indirmeye yönelik belirli standartlar geliştirilmektedir bakıldığında, dünyada neredeyse sıfır enerjili bina, Pasif Ev, artı enerjili bina kavramlarının hem teorik çalışmalarda hem de uygulamala yaygın olarak kullanıldığı görülmektedir. Düşük enerji tüketimi önüne alınarak yapı tasarımlarının yapılmasını, ekolojik özelliklerin dikkate alınmasını sağlayan kriterleri belirleyen ve değerlendiren sistemlerinin ülkemize göre uyarlanması ve adapte edilmesi gerekmektedir (Zağpus, 2009). Ancak gelişmekte olan ülkelerde olduğu gibi ülkemizde de bu konulardaki duyarlılık yeni oluşmaktadır ve bina sektöründe bu konuda hızlı adımlar atılmalıdır (Sev ve Canbay, 2009). Avrupa Birliği tarafından yayınlanan 'Binalarda Enerji Performansı Yönetmeliği'nden (EPBD, 2002) sonra; yeni yapılarda enerji üzenlemeler ve önlemlerin yanı sıra mevcut binalarda da enerji etkin iyileştirme yapılması zorunlu hale gelmiştir (Güçyeter, 2010)

büyük bir kısmı, geleneksel yöntemlerle inşa edildiğinden, ısıtma ve soğutmada kullanılan enerji tüketimi, projelendirme ve uygulama aşamasında büyük çoğunlukla dikkate alınmamıştır. Bu sebeple belirtilen verilerden yola çıkarak, mevcu

1. GİRİŞ

Konaklama tesisleri geceyi geçirmek amacıyla inşa edilen ve bunun yanı sıra yiyecek, içecek, eğlence gibi gereksinimlerin karşılandığı mekanlardır. Turizm sektöründe konaklama tesisleri önemli bir rol oynamaktadır. Özellikle otel yapıları bu tesislerin öne çıkan bir türü olarak görülmektedir. Otel atmosferi; otele kimlik oluşturma, hizmet ve ürün özelliklerinden daha fazla önem verilmesi gereken bir konudur.

Müşteri oteli ilk gördüğünde zihninde çeşitli görüşler oluşmaktadır. Kişilerin beklenti ve algıları üzerinde otel atmosferinin önemli rol oynadığı yapılan araştırmalar neticesinde bilinmektedir. Buna göre atmosfer; otelin genel dış görünümü, mekân düzeni, ışıklandırma, renk kullanımı ve insan faktörü gibi müşterilerin otel hakkında izlenimlerini etkileyen faktörlerdir. Müşterilerin otel tercihinde; otelin ilgi çekici ve özgün tasarımının yanı sıra kullanıcılar üstünde bıraktığı psikolojik etki de büyük önem taşımaktadır.

2. OTEL YAPILARI

Oteller sahip oldukları bazı özelliklere bağlı olarak aşağıdaki gibi sınıflandırılmaktadır.

- Konaklama Amacına Göre (Sağlık, kongre, seminer gibi)
- İşletme Süresine Göre (Mevsimlik veya sürekli açık olan)
- Ulaşım Olanaklarına Göre (Havaalanı, liman, istasyon, şehir içi veya dışı gibi)
- Kapasitesine Göre (Sermaye, müşteri sayısı, yatak kapasitesi, mekân büyüklüğü)
- Niteliklerine Göre (Yıldız sayısı)

2.1. Konaklama Tesisleri ve Otellerin Tarihsel Gelişimi

Göçebe hayattan yerleşik yaşama geçilmesiyle birlikte seyahat etmenin zorunlu değil gerektiğinde yapılıyor olmasıyla konaklama tesisleri, biçimsel değişiklik geçirmiş olmasına rağmen özü aynıdır.

Hanlar, ilk konaklama tesisleri olarak kabul edilmektedir. Tarihi çok eski zamanlara dayanan bu yapılar, misafirlerin dinlenmesine ve ihtiyaçlarını karşılamalarına yönelik mekanlardır. Güzel sanatlardaki gelişmeyle birlikte ticari ve kültürel seyahatlerin yapılmasıyla özellikle tüccarlar ve öğrenciler ülke dışına çıkmaya başlamıştır. 1500'lü yılların başlarında yaşanan bu hareketlilik ülkeler arası turizmi geliştirmiştir. 1700'lü yıllar özellikle İtalya gibi kıyı ülkelerini görmek, Avrupa'yı ve sanat yapılarını gezmekle birlikte eğitim almak dönemin vazgeçilmez anlayışı haline gelmiştir. Endüstri dev-

BÖLÜM 3

TARİHİ LÂDİK HÖYÜK'ÜN SOKAK DOKUSUNUN CEPHE REHABİLİTASYONU VE KENTSEL DONATILARIN YENİLENMESİ

Murat ORAL[1]

Zafer KUYRUKÇU[2]

1 Doç. Dr., Konya Teknik Üniversitesi, Mimarlık ve Tasarım Fakültesi, İç Mimarlık Bölümü, ORCID: 0000-0003-4848-5417

2 Dr. Öğr. Üyesi, Konya Teknik Üniversitesi, Mimarlık ve Tasarım Fakültesi, Mimarlık Bölümü, ORCID: 0000-0001-6454-7484

1. GİRİŞ

Tarihi çevreler, geçmişten günümüze ulaşan yapı, kalıntı ve açık alanların oluşturduğu fiziksel, arkeolojik ve sanatsal değerler ile kentin kullanıcılarını içeren sosyal değerlerin bütünlüğü sonucunda oluşmuşlardır. Tarihi kalıntılar genellikle birbirini izleyen geçmiş toplumların ürettiği ve üretildiği dönemin tanıklığını yapan mimari ürünlerdir. Günümüzde fiziksel eskime (yaşlanma), hızlı ve plansız kentleşme, nüfus artışı ve teknolojinin etkisi ile değişime ve dönüşüme maruz kalan tarihi çevreler bozulmaya uğramaktadır. Tarihi çevrelerin bozulmasını engellemek, bu çevreleri oluşturan fiziksel ve sosyal değerler bütününü korumak, günlük yaşam ile bütünleştirmek, kente yeni çekim noktaları kazandırmak, yerele ekonomik katkıda bulunmak, yapıların kullanım sürekliliğini sağlamak ve konfor koşullarını yükseltmek tarihi çevreleri korumanın temel amacı olarak gösterilmektedir (Ahunbay, 2004; Aykaç, 2009; Çelik ve Yazgan, 2007; Smith, 2002).

Tarihi çevreler 'sit' kavramıyla adlandırılmakta olup 2863 sayılı Kültür ve Tabiat Varlıklarını Koruma Kanunu'nda sit alanları; arkeolojik, tarihi, kentsel ve doğal sit olarak sınıflandırılmıştır. Arkeolojik sit alanı ise Korunması Gerekli Taşınmaz Kültür Varlıklarının ve Sitlerin Tespit ve Tescili Hakkında Yönetmelik'e göre 'insanlığın varoluşundan günümüze kadar ulaşan eski uygarlıkların yer altında, yer üstünde ve su altındaki ürünlerini, yaşadıkları devirlerin sosyal, ekonomik ve kültürel özelliklerini yansıtan her türlü kültür varlığının yer aldığı yerleşmeler ve alanları' olarak ifade edilmektedir. Bu çerçevede arkeolojik sitler, taşıdıkları önem ve alanda uygulanacak koruma ve kullanım koşulları bakımından üç dereceye ayrılmıştır. I. derece arkeolojik sitlerde kesinlikle hiçbir yapılaşmaya izin verilmezken, II. derece arkeolojik sitlerde tescilsiz yapıların basit onarımları yapılabilmektedir. III. derece arkeolojik sitler ise planlama yapılabilen alanlar olarak belirlenmiştir.

Tarihi çevrelere ve yapılara uygulanan farklı koruma teknikleri bulunmaktadır. Tarihi yapıların özgünlüğünü, bilimsel ve teknik olarak korumak ve onarmak için restorasyon uygulamaları yapılmaktadır. Tarihi yapıların durumuna göre müdahale yöntemleri ve restorasyon teknikleri değişmektedir. Tarihi yapılarda uygulanan başlıca restorasyon teknikleri sağlamlaştırma, temizleme, bütünleme, ayıklama, yeniden yapım, sağlıklaştırma, yeniden işlevlendirme, taşıma olarak sıralanmaktadır. Bu restorasyon tekniklerinden sağlıklaştırma (rehabilitation/rehabilitasyon) ise geleneksel kent dokularını meydan getiren yapıların muhdes elemanlardan (tel, klima, tabela, saçak, pencere, kat ilaveleri vb) arındırılması, cephe temizliği ve basit onarımlarına yönelik uygulamaları içeren müdahaleler olarak adlandırılmaktadır (Yergün, 2019). Sokak sağlıklaştırma ile tarihi çevrelerin korunması, alanda yaşayan kişilerin çağdaş yaşam konforun-

BÖLÜM 4

KONUT KAVRAMINA YENİ YAKLAŞIM KÜÇÜK EV (TİNY HOUSE) HAREKETİ

Seval YILMAZ[1]

1 Dr. Arş. Gör. , Niğde Ömer Halisdemir Üniversitesi, Mimarlık Fakültesi, İç Mimarlık Bölümü ORCHID ID 0000-0001-8327-4768

GİRİŞ

İlk çağlardan itibaren insanoğlunun farklı iklim koşulları, yabani hayvanlar ve tehlikeli durumlardan kendini koruyabilmesi ve yaşamına devam edebilmesi barınma mekânlarına ihtiyaç duymaktadır. Barınma ihtiyacının karşılanabilmesi için yaşandığı dönemde var olan malzeme ve tekniklerin kullanılmasıyla farklı yöntemler geliştirilmiştir. Mağaralarla başlayan bu değişim süreci zaman, malzeme, teknolojik değişim/gelişimlerle farklılaşmış, evrilerek gelişmeye devam etmektedir.

Konut kavramıyla ilgili çok çeşitli tanımlamalar mevcuttur. Tdk'da konut, insanların içerisinde yaşadığı, temel gereksinimlerini karşıladıkları, korundukları barınaklar olarak tanımlanmaktadır(TDK, 2022). Kuban'ın tanımlamasına göre konut, bireylerin zamanlarının çoğunu geçirdiği mekan, güvenlik dolayısıyla sığındıkları barınak, kavramsal olarak ise yuva olarak açıklanmıştır(Kuban, 1998). Konut bireylerin temel gereksinimlerini karşıladığı mekan değil, içerisinde çeşitli faaliyetlerini sürdürülebileceği farklı duygular yaşayabileceği; kültür, yaşam tarzı, ekonomik gelirlere göre değişkenlik gösteren yaşamsal bir varlık olarak tanımlamaktadır(Öymen Gür, 2000).

İlk çağlarda barınma gereksinimini karşılayan bir sözcük olan konut, zaman, ekonomi, teknoloji, sağlık sorunları, doğayla iç içe olma isteği, gibi birçok farklı istek ve ihtiyaca göre şekillenen mekanlardır. Nüfus artışı, endüstri devrimi, kentleşme hareketlerinin etkisiyle dünya genelinde konut talebinde de artışlar yaşanmıştır. Farklı kültürlerin ve kullanıcı isteklerinin çeşitlenmesi sonucunda konut tasarımında da artışlar/değişimler yaşanmıştır.

Amerikalı Psikolog Abraham Maslow'un geliştirmiş olduğu insan ihtiyaçlarının sıralandığı(Şekil 1.) Maslow İhtiyaçlar Hiyerarşisi'nde ilk sırada en temel ve gerekli ihtiyaç hava ve su; ikincisi korku ve endişeden korunma özgürlük dahil olmak üzere kendini güvende hissetmesidir. Bu bağlamda en temel fizyolojik gereksinim barınma ihtiyacıdır.

GİRİŞ

Uluslararası tıp dergisi The Lancet'de 24 Ocak'ta çevrimiçi olarak yayınlanan bir araştırmaya göre 2019 yılının 1 Aralık tarihinde Çin'in Hubei eyaletinin başkenti Vuhan'da ilk vakaları ortaya çıkan yeni tip koronovirüs dünyanın her yerine yayılmıştır. Bu yazı yazılırken bu hastalık başlangıcından itibaren yaklaşık dört yıl geçmiş olmasına rağmen farklı varyantlarla vaka ve ölüm sayıları zaman zaman artış göstermiş olup son aylarda vaka sayılarında ciddi düşüşler görülmüştür. Bulunan aşılarla virüse direnç sağlanmaya çalışılmakta ve sağlık alanında Ar-Ge çalışmaları hızla sürmektedir. Dünyanın virüsten nasıl etkilendiği ve pandemi sonrası hayatlarımızda eski kuralların geçerliliği tartışmaya açıktır. Şüphesiz bütün disiplinler virüsten farklı şekillerde etkilenmiş, sağlık ve mimarlık sektörleri de başı çekmiştir.

Dünya tarihi, Covid-19'dan önce de pek çok salgın hastalığa şahitlik etmiş, farklı şekillerde yapılaşmasını şekillendirmiştir. Endüstri devrimiyle birlikte fabrikalarda çalıştırılmak üzere, işçiler kırsal kesimden kente göç etmiştir. Alt ve üst yapı olarak bu göçe hazır olmayan kentlerde sağlıksız yerleşim birimleri oluşmuş, bu alanlarda da sıklıkla bulaşıcı hastalıklar görülmeye başlanmıştır.

Özellikle Avrupa'da 19 YY da kolera salgınıyla altyapı ve kanalizasyon sistemlerinin önemi anlaşılmış ve bu sistemler üzerinde geniş yollar inşası yaygınlaşmıştır. Çin'de başlayan 3. veba salgınında ise hastalığa farelerin sebep olduğu anlaşılınca kentlerdeki atık su boruları bina temelleri ve yükseklikleri, kapı eşikleri gibi birçok yapı elemanının tasarımında değişikliklere gidilmiştir. Yine verem hastalığı salgınından sonra geniş pencereli, bol havadar beyaz geniş mekanlar, ıslak hacimlerde fayansların kullanılması, hijyen artırılması gibi yöntemler tasarım kriterleri arasına girmiştir (Yazıcıoğlu Halu, 2020). Covid 19'dan sonra da tasarım kararlarında sosyal mekânların genişlemesi ve bireysel korunaklı alanların artması kaçınılmazdır.

Bu sürece uyum sağlamak için evde kalma, uzaktan eğitim, uzaktan çalışma gibi kavramlar gündeme getirirken, yeni sorunları da beraberinde getirmiştir. Birçok kamusal alan uzaktan çalışmaya adapte olurken, sağlık kurumları için bu durum geçerli olamamıştır. Bundan dolayı tasarım olarak salgın hastalık gibi afetlerde sağlık yapılarının salgına adapte olması, diğer kamusal alanların adapte olmasından daha ayrı ve öncelikli olarak düşünülmelidir. Sağlık kurumları, bu ve bunun benzeri salgınlarda hep aktif olarak rol almak zorunda olduğu için uzaktan çalışma sisteminin uygulanamayacağı birimlerdir. Hastane ve sağlık birimleri önceden bu durumlar ön görülerek tasalanmalıdır. Bu tasarım aşamasında da sağlık yapılarının olağanüstü durumlara göre veya kendi içindeki büyümelere, yeni birim ek-

GİRİŞ

Küresel iklim değişikliği gün geçtikçe etkisini arttırmakta ve yaşam kalitesine etki etmektedir. İnsanların yoğun olarak bulunduğu kentler de küresel ısınmadan olumsuz etkilenmektedir. Çarpık kentleşmenin küresel ısınmayı tetiklemesiyle birlikte kentlerdeki bitki yoğunluğu gün geçtikçe azalmaktadır. Kentlilerin kendilerini doğaya yakın hissedebileceği nadir alanlardan olan açık yeşil alanların önemi ise artmaktadır.

İklim değişikliğinin getirdiği en önemli sorunlardan biri de su olmaktadır. Küresel ısınma ve nüfus artışları, zaten dış etkenlere açık olan su varlığını tehlikeye sokmaktadır. İnsanlar için olduğu kadar diğer canlılar için de önemli olan su, bitkilerin yaşamsal faaliyetlerini devam ettirebilmeleri için gereklidir. Bu da her bitkinin ihtiyacına göre sulanması ile mümkündür. Peyzaj alanlarının insan hayatı için gözden çıkarılabilir görülmesi sebebiyle muhtemel bir su kıtlığı tarım alanlarından önce peyzaj alanları üzerinde etkili olacaktır (Demirel, 2022). Bitkiler suyun yokluğunda yaşamlarını ve gelişimlerini sürdüremezler. Her bitkiye ihtiyacı kadar su verilmesiyle peyzaj sulamasının daha dengeli ve verimli hale getirilmesi sağlanabilir. Peyzajda etkin sulama için bitkilerin su ihtiyacının belirlenmesi en önemli başlangıç olacaktır. Su ihtiyacı az olan bitki fazla sulama sonucu ölebilir veya tam tersi durumda bitki yeterince sulanmazsa da olumsuz etkilenecektir. Bu sebeple çalışma alanındaki bitkiler iyi analiz edilmeli ve yapılan analizlere göre doğru bir sulama programı oluşturulmalıdır (Demirel, 2022).

Kent içi açık yeşil alanlara bakıldığında büyük bölümünü spor sahalarından refüjlere kadar geniş bir yaşam alanı ve mekân oluşturan çim bitkilerinin kapladığı görülmektedir. Çim, iç içe geçmiş gövde ve yapraklardan oluşan, hızlı büyüyen bir yer örtüsü olarak tanımlanmaktadır (Taşkın ve Bilgili, 2020). Çim alanlar genellikle Poaceae familyasına ait bitkilerden oluşur. Çim türleri boy, renk, doku, gölgeye dayanım, basmaya dayanım gibi özelliklerle birbirlerinden ayrılırlar. Çim çeşitleri peyzaj alanları, spor faaliyet alanları, refüjler ve kamusal alanlar dahil olmak üzere birçok alanda kullanılmaktadır. Amerika Ulusal Araştırma Konseyi'nin 1993 yılında yaptığı bir araştırmaya göre, dünyadaki dağların da yaklaşık üçte biri ormanlardan çok çimle kaplıdır. Çimin rekreasyon amaçlı ilk kullanımı İran ve Arap bahçelerinde olmuştur (Taşkın ve Bilgili, 2020). Ancak, 16. yüzyılda Avrupa ülkelerinde çim alanlar yaygınlaşmaya başlamıştır. Bu dönemden sonra çimlerin bahçelerde, parklarda ve diğer rekreasyon alanlarında kullanımı oldukça artmıştır. Bu alanların tam bir bilimsel disipline kavuşması ve yeşil alan kültürünü kazanması ise 1946 yılından sonra olmuştur (Kuşvuran, 2012). Her çim türünün avantajları ve dezavantajları, güçlü ve zayıf yönleri vardır. Genel olarak botanik özelliklerine göre sınıflandırılsalar da kullanılacak tür bölgenin iklim koşulları dikkate alınarak

Felsefe, düşünmeye ve sorgulamaya istekli kişilerin düşünme faaliyetini ifade eden bir kültür ögesidir (Cevizci, 2012: 11-15). Kişiler sahip oldukları hayatı ve mesleklerini anlamlandırıp yaşamlarını ve yaptıkları işleri tüm gerekliliklerivle yerine getirme yolunda felsefi düşünme biçimine ihtiyaç duymaktadır. Günümüzde farklı uzmanlık alanlarının var olduğu kabul edilmekle birlikte, felsefe diğer disiplinler ve uzmanlıklarla ilişki içindedir. Bu bağlamda, Cevizci'nin (2012:21,25) belirttiği üzere, dünyanın açıklanması ve anlamlı kılınması bilim, din, sanat ve felsefe olmak üzere dört eksen üzerinde gerçekleşir ve dört disiplinin ortak noktası varlığı ve dünyayı anlamlı kılmaya çalışmalarıdır. Fakat diğerlerinden farklı olarak felsefe, bilim, din, sanat gibi diğer disiplinleri ele alan, yapılarını ve sınırlarını gösteren ikinci düzey bir etkinlik olarak farklılaşmaktadır. Bu görüşe paralel olarak Yücel'e (2002:12-13) göre, felsefe mimarlığı içerebilir; ama tasarlama ve tasarlananı inşa etme eyleminden oluşan mimarlık kendi alanını oluşturmak için felsefeyi kapsayan bir özgüllük alanına sahip değildir. Mimarlık ile ilişkisini ele aldığımızda, felsefe, mimarın düşüncesinin düzenlenmesi ve mekanı tasarlaması arasındaki köprüyü oluşturmaktadır (İnam, 2002:127). Felsefe, sorgulama ve anlamlandırma eylemlerini içermesi sebebiyle yapılan işin özgünlüğünü oluşturmaya katkıda bulunmaktadır. Benzer şekilde, bulunulan koşulların, ihtiyaçların, yapılacak işin amacının ve kullanıcıda yaratacağı etkinin sorgulanması ve üzerine düşünülmesi mimari tasarımın özgün yanını oluşturmaktadır. Mekan, içinde konumlanılan, insanların var olma olasılıklarını keşfettiği bir "ortam", barınma ihtiyacından daha fazla boyutlar taşıyan, özne ve nesnenin buluştuğu "yer"dir (Aydınlı, 2002:41). Mimarlığa felsefi bakış açısıyla yaklaşmak tasarım sürecinde eleştirel bir bakış edinmeyi, yapılan işin doğasını fark ederek özgün yanını ortaya çıkarmayı sağlamaktadır (İnam, 2002:129). Bu doğrultuda, mimarlığı anlamak ve anlamlı kılmak için felsefeye başvurmak gerekmektedir.

Mimar Carlo Scarpa 1906 yılında İtalya'nın Venedik şehrinde doğmuştur. 1920 yılında Accademia Reale di Belle Arti'de eğitimine başlamış, eğitimi sırasında Vincenzo Rinaldo'nun mimarlık ofisinde çalışmış ve 1926 yılında mezun olmuştur. Mezun olduktan sonra Venedik Mimarlık Fakültesi'nde asistanlık yapmış ve 1927 yılında kendi mimarlık ofisini kurmuştur. Venedik Mimarlık Fakültesi'nde verdiği dersler ve mimarlık ofisindeki çalışmalarına ek olarak, Cappellin Cam Fabrikası'nda sanat danışmanlığı yapmış ve Murano'daki Venini Cam Fabrikası'nda 14 yıl boyunca çalışmıştır. Roma'da müze tasarımı üzerine dersler vermiş, 1962 yılında iç mimarlık bölümünde profesör unvanını almıştır. İtalya'da düzenlenen Venedik Bienali, Italia '61 Ulusal Sergisi gibi farklı sergilere katılmasının yanı sıra 1956 yılında Ulusal Olivetti Mimarlık Ödülü'nü ve Verona'da restorasyon çalışmasını yaptığı Castelvecchio Müzesi ile IN-ARCH Ödü-

MEKANIN DENEYİMLENMESİNDE ESTETİĞİN ÖNEMİ VE MEKANSAL TASARIM DİSİPLİNLERİYLE İLİŞKİSİ

H. Ekin OKTAY[1]

Şevin BAYRAM[2]

1 Dr. Öğr. Üyesi, Van Yüzüncü Yıl Üniversitesi, Mimarlık ve Tasarım Fakültesi, Peyzaj Mimarlığı Bölümü

2 Arş. Gör. Van Yüzüncü Yıl Üniversitesi, Mimarlık ve Tasarım Fakültesi, Peyzaj Mimarlığı Bölümü

1. Giriş

Günlük hayatımızda "estetik" kavramı önemli bir yere sahiptir. Hoşumuza giden, bize güzel gelen şeyleri, bir bakıma anlam kaymasıyla güzel ile eşanlamlı olacak şekilde "estetik "olarak nitelemekteyiz. Ama felsefenin bir alt dalı olan estetik incelendiğinde estetiğin, güzel kavramını kapsamakla birlikte, güzelin çok ötesinde bir araştırma kapsamının bulunduğu hatta estetik kelimesinin etimolojik temelleri incelendiğinde "estetik"'in güzelle ilgili değil duyu, duyumsama ve duyu bilgisi ile daha çok ilişkili ve bunların üzerine detaylı araştırmalarda bir alanı tanımlayan bir kavram olduğu görülmektedir. Felsefede "Mantık" akılla ve doğru düşünme ile ilgilidir.

Bu bağlamda mantık doğru düşünmenin, düşünceleri kesinleştirme üzerine ilkelerle ilgilenen ve bir anlamda bir üst bilgi alanını tanımlayan bir araştırma alanıdır. Bu bağlamda mantık ile ilgili olarak mantığın kurucusu olarak kabul edilen Aristo'yu anmak önemli görünmektedir. Aristo öncesinde de mantık ile ilgili çokça çalışma yapılmış olsa da Aristo kendisinden öncekilerden farklı olarak mantığın ilkelerini belirlemiş ve mantığı sistematik olarak araştırma alanı yapmış olan ilk düşünürdür. Arsito'nun bugünkü estetik disiplini içerisinde yer almış olan konuları üzerine de araştırma yapmış olması da diğer bir ilginç noktadır.

Yine felsefede "Etik" ise doğru edimde bulunma, doğru edimde bulunmanın yollarının araştırılması ve erdemli yaşamla ilgili sorunlarla ilgilenir. "Estetik" ise bunlardan ayrı olarak duyu bilgisi üzerine düşünme ve araştırmada bulunma disiplini olarak tanımlanabilir. Bu bağlamda estetik; etik ve mantıktan farklı olarak duyunun, duyumsamanın ve algının izinde bilgi üretmeye çalışmaktadır. Üretilen bu bilgiler insanı anlamaya yardımcı olmakta ve insanın kendisini ve çevresini tanımlamasını sağlamaktadır. Bu bilinçle insan çevresinde oluşan durumlara karşı daha duyarlı ve sağduyulu hareket etmektedir. İnsanın kendi farkındalığının artması ile duyarlılığı da artmakta ve çevreye, mekana, diğer varlıklara ilişkin sorumluluğu da artmaktadır.

İnsan farklı bilgi kaynaklarında gelen bilgileri beyninde sentezlemekte ve bu sentez bağlamında hareket etmektedir. Duyusal bilgi de bu bağlamda çevreden gelen uyarıcılara olan tepkinin oluşmasında önemli bir etkendir. Duyusal bilgi, duyumsama ve algı bağlamında bilgi sorgulamaları yapan estetik, sanat felsefesinin ötesinde insan yaşamının her alanına ilişkin sorgulamalar yapmaktadır. Bu sorgulamalar bağlamında insan yaşamının ve insanların hayatlarından aldıkları doyumun artması mümkün görünmektedir.

Estetik önceleri sadece sanatla ilişkili görünse de zamanla genişlemiş ve hayatın her alanına nüfuz eder hale gelmiştir. Sanat insan üretkenliği-

LAPSEKİ 72 ADA 1 PARSELDEKİ TESCİLLİ TAŞINMAZIN RESTORASYON UYGULAMA PROJESİ

Hatice Çiğdem ZAĞRA ÖZ[1]

1 Dr. Rumeli Üniversitesi, Sanat, Tasarım ve Mimarlık Fakültesi, Mimarlık Bölümü, İstanbul, Türkiye https://orcid.org/0000-0002-9951-5922

Giriş

Mimari restorasyon; coğrafi koşullar, biyolojik etmenler, iklimsel ve insan kaynaklı nedenlerle hasar gören kültürel yapıların korunması ve yenilenmesi amacıyla gerçekleştirilen çalışmaları ifade etmektedir. Bu çalışmaların temel amacı, kültürel mirasın yok olmasını engelleyerek, tarihi yapıların gelecek nesillere aktarımının sağlanmasıdır. Restorasyon çalışmaları, öncelikle korumayı, gerekli görülmesi durumunda tahrip olan kısımların onarımını ve yeniden işlevlendirilmesi gibi konuları kapsamaktadır.

Restorasyon uygulamalarına başlamadan önce kapsamlı bir proje çalışması yapılmalıdır. Restorasyon projeleri, mimarlık, mühendislik, tarih, sanat tarihi, arkeoloji ve malzeme bilimi gibi birçok farklı disiplinin iş birliği yapması gereken karmaşık süreçlerdir. Ayrıca, kültür varlıklarının korunması ve restorasyonu konusunda yetkili kamu kurumları, sivil toplum kuruluşları ve yerel yönetimler de iş birliği yaparak projenin başarılı bir şekilde tamamlanmasını desteklemelidir (Basmacı, 2017).

Projelerin ilk aşamasını rölöve çalışması oluşturmaktadır. Rölöve, tarihi ve kültürel yapıların mevcut durumunun belirlenmesi ve restorasyon sürecinin planlanması için önemli bir adımdır. Bu çalışmanın içeriği aşağıdaki şekilde sıralanabilir (URL-1, 2023):

1. Plan, kesit ve görünüşler: Yapının mevcut durumunu tanımlayan plan, kesit ve görünüş çizimleri ile yapının geometrik özellikleri ve ölçüleri belirlenir.

2. Fotoğraflar: Yapının dış ve iç mekanlarının fotoğrafları çekilir ve detayları yakalanır.

3. Malzeme analizi: Yapıda kullanılan malzemelerin cinsleri ve özellikleri tespit edilir.

4. Hasar tespiti: Yapıda mevcut olan hasarlar ve tahribatlar tespit edilir ve kaydedilir.

5. Yapısal analiz: Yapının taşıyıcı sistemi, temel yapısı, çatı sistemi gibi yapısal özellikleri belirlenir.

6. Tarihi araştırma: Yapının tarihi ve kültürel önemi hakkında bilgi toplanır.

7. İşletme bilgisi: Yapının kullanım amacı, işletme şekli ve diğer bilgiler belirlenir.

8. Değerlendirme: Yapının mevcut durumu analiz edilir ve restorasyon sürecinin planlanması için gereken değerlendirmeler yapılır.

Bu unsurların yanı sıra, rölöve projeleri yapıya özgü farklı unsurlar

MAHKUMLARIN KİŞİSEL ALANLARININ TASARIMI

Betül NEZİR[1]

Murat KILIÇ[2]

1 Mimar, Kırıkkale Üniversitesi, Güzel Sanatlar Fakültesi, İç Mimarlık Ve Çevre Tasarımı Bölümü, betulnezir0@gmail.com, ORCID ID: 0000-0002-4633-428X

2 Prof. Dr. , Kırıkkale Üniversitesi, Güzel Sanatlar Fakültesi, İç Mimarlık Ve Çevre Tasarımı Bölümü, muratkilic@kku.edu.tr, ORCID ID: 0000-0001-6113-8634

1. GİRİŞ

Yakın tarihe kadar, suçu önlemek için suçluların çeşitli işkencelere maruz bırakılarak her türlü kişisel hak ve özgürlükten yoksun bırakıldığı, katı ve acımasız bir cezalandırma sistemi hakim olmuştur. 20. yüzyılda ise adaleti sağlamak ve kefaret ödetmek amacıyla çeşitli haklardan mahrum bırakmanın yanı sıra mahkumun rehabilite edilmesi ve buna uygun insani koşulların sağlandığı bir hapishane anlayışı kabul edilmiştir. Bu anlayışa göre, suçun engellenmesi ve kontrol altına alınmasını amaçlayan cezaevlerinin tasarımı, mahkumların algılarını ve dolaylı yoldan ıslah düzeyini etkileyecek önemli bir unsurdur. Cezaevi tasarlayan mimar, mahkumların denetim kolaylığı, güvenliği, kontrolü gibi temel sorunları ile işlev, sirkülasyon, havalandırma ve yönlendirme gibi olağan mimari sorunları çözmeli; aynı zamanda mahkumlara yönelik ıslah programının bir parçası olarak, kişisel alanlarda aydınlatma, malzeme, estetik, gürültü, sıcaklık, hava kalitesi, mahremiyet gibi tasarım unsurlarını da doğru kullanmalıdır. Bu çalışmada, mahkumların kişisel alanlarının tasarımında dikkate alınması gereken tasarım unsurlarıyla ilgili bilgi verilmektedir.

Yaşamın her alanında olduğu gibi, cezaevlerinde de tasarım faktörü insan davranışını ve konfor düzeyini etkilemektedir. Cezaevlerinde, mahkumların yaşam alanlarındaki ortam koşullarının insani yaşam kriterlerine uygunluğu sağlanmalıdır. Suçlarına, cinsiyetlerine, yaşlarına göre ayrı ortamlarda hapsedilen mahkumlar için ayrı tasarım yaklaşımları gerekmektedir; odaların kapasitesi, aydınlatması, boyutları, akustiği, malzemeleri ve renkleri; mahkumların bu özelliklerine göre özelleştirilmelidir. Diğer mahkumlar için tehlike arz eden mahkumlar minimum kapasiteli odalarda barındırılmalıdır. Yapılan kriminolojik araştırmalarda, toplumsal sorunların yanı sıra fiziksel çevrenin de suçla ilişkili olduğu anlaşılmıştır.

2. AYDINLATMA

İnsani yaşam koşullarının sağlanabilmesi için; kullanıcının bir dereceye kadar kontrol edebildiği, görsel konfor ve psikolojik refah sağlayan, yaşam alanı içerisinde: uyku, dinlenme, okuma, spor gibi aktiviteler için aydınlatma ihtiyacına cevap veren bir tasarım gereklidir (Şekil 1).

Yetersiz aydınlatma; konfor ve davranışlar üzerinde uykusuzluk, huzursuzluk gibi olumsuz etkilere sebep olmakla birlikte personel ile mahkumlar arasındaki ilişkiyi negatif etkileyerek güvenlik sorunlarına da yol açabilmektedir. Aydınlatma armatürlerinin seçimi cezaevleri için kritik önem taşımaktadır. Bir mahkumun intihara teşebbüs etmek için ip takma olasılığını azaltacak, zarar verilmesini ve parçalanarak istenmeyen sonuçlara yol açabilmesini önleyecek, darbelere karşı dayanıklı armatürler seçil-

TARİHİ BİR BAHÇEDEN KAMUSAL BİR KENT PARKINA: BİR YENİLEME PROJESİ TASARIMI VE UYGULAMA SÜRECİ

Melda AÇMAZ ÖZDEN[1]

1 Dr. Öğr. Üyesi Çanakkale Onsekiz Mart Üniversitesi Mimarlık ve Tasarım Fakültesi Şehir ve Bölge Planlama Bölümü

Şehir ve Bölge Planlama Bölümü

GİRİŞ

Kent parkları, kentsel alan kalitesini artırma, kent sakinleri ve kentin kendisi ile sağlıklı bir bağ kurma kapasitesi yüksek olan kamusal açık alanlar olarak kabul edilmektedir. Bu anlamda kentsel park tasarımı, kentsel kimliği ve yaşam kalitesini ifade etmektedir. Bu çalışma, Türkiye'de Çanakkale ili kentsel sit alanı içerisinde yer alan tarihi bir kent parkı için yürütülen bir yenileme projesinin tasarım yaklaşımını ele almakta ve değerlendirmektedir. Çanakkale, antik Truva kenti kalıntıları ve Gelibolu Yarımadası gibi önemli tarihi ve doğal alanları barındıran bir arazi ile çevrilidir. Kentin üzerinde yer aldığı Çanakkale Boğazı (Hellespont olarak da bilinir), Kıta Avrupası ile Asya arasında doğal bir hat ve geçiş noktası oluşturur. Bu topoğrafik ve tarihi değerler, şehri Türkiye'nin özgün yerleşim yerlerinden biri yapmaktadır. İl merkezi, tarihi ve kültürel değerleri nedeniyle ilgili bölge Kültür ve Tabiat Varlıklarını Koruma Kurulunca kentsel sit alanı ilan edilmiştir.

Tasarım ve yenileme sürecine konu olan kent parkı, kentsel sit alanı içerisinde yer alan ve merkezi bir konumda olan Halk Bahçesi'dir. Böyle bir kent parkının restorasyon projesini geliştirmenin temel güdüleri ve yaklaşımları, sosyo-kültürel, tarihi ve ekolojik özelliklerini tehlikeye atmadan tarihi bir yeşil alanı günümüzün kullanıcı ihtiyaçlarına göre yeniden canlandırmak ve zenginleştirmek olmuştur. Yenileme projesi temel olarak yeşil alan için sosyo-mekansal ve ekolojik sürdürülebilirliğin iyileştirilmesini dikkate alan bir yeniden tasarım yaklaşımını özümsemektedir.

HALK BAHÇESİ'NİN TARİHİ VE ÇANAKKALE'DE CALVERT AİLESİ

Çanakkale tarihine baktığımızda kentin tarihinde önemli bir yeri olan Calvert ailesi karşımıza çıkmaktadır. Bu çalışmaya konu olan Halk Bahçesi, Çanakkale tarihinde yeri olan Calvert ailesinin kendi özel bahçesinin bulunduğu yerde konumlanmaktadır. Bu nedenle, Halk Bahçesi'nin tarihini anlatırken bu ailenin geçmişinden bahsetmek doğru olacaktır. Calvert ailesi özellikle diplomasi, ticaret, arkeoloji, tarım ve madencilik alanlarında kentin tarihinde önem teşkil etmiştir (Atabay, 2012) Bölgedeki cazip şartlar nedeniyle 1829 yılında Charles Alexander Lander Çanakkale'ye yerleşmiştir ve aynı yıl İngiliz konsolosu olmuştur. Calvert'lerin Çanakkale'ye gelişlerinin nedeni dayıları Charles Alexander Lander'in bu bölgede ticaretle uğraşmasıdır (Allen, 1999; Kaplan, 2009). 1842 yılında Frank Calvert'in büyük kardeşi Frederick Calvert ve dayıları Lander ile birlikte başarılı bir meşe palamudu işletmesi kurmuşlardır (Allen, 1999). Frederick Calvert, on yılı aşkın bir süre boyunca Lander'e hem iş hem de konsolosluk konularında yardımcı olmuştur. 1845-1846 yıllarında konso-

ESKİŞEHİR KENTİ TARİHSEL GELİŞİMİ VE TARİHİ ODUNPAZARI DOKUSUNUN KENT İÇİN ÖNEMİ

Elif Merve ERTURAN[1]

1 Araştırma Görevlisi Doktor, Konya Teknik Üniversitesi, Mimarlık ve Tasarım Fakültesi, Mimarlık Bölümü, ORCID ID: 0000-0003-1484-7870

GİRİŞ

Kent, en dar anlamıyla "nüfusun çoğu ticaret, sanayi ya da yönetimle ilgili işlerle uğraşan, tarımsal etkinliklerin olmadığı yerleşim alanı" olarak tanımlanmaktadır (Türk Dil Kurumu, 2007). Kentler, uygarlıkların geçmişten miras aldıkları tarihle, ona katılan kültürle, içinde yoğruldukları coğrafyayla biçimlenirler (İlgar, 2008). Kentlerde tarihi yerleşmeler incelenip analiz edilerek geçmişe ait kültürel değerler ortaya konabilmektedir ve bu durum geçmişin kültürel özelliklerinin gelecek kuşaklara aktarılması bakımından önemli bir yere sahiptir (Özer, 2021). Her kent kendine özgü özellikleriyle anımsanır ve anılır. Kimi kentler memur kenti, öğrenci kenti vb. olarak bilinirken kimi kentler ise kalabalık, gürültülü, sakin gibi sıfatlarla nitelendirilir. Her bir kentin konumu farklıdır ve kendine özgü bir kimliği vardır, bu da kentleri birbirinden ayıran temel unsurları ortaya koyar.

Türkiye topraklarında, Anadolu'nun göbeğinde yer alan ve önemli bir kavşak olan Eskişehir kenti (Şekil 1) milattan öncesi tarihlere kadar köklü bir geçmişe sahiptir. Cumhuriyet dönemine kadar 30.000 kişinin altında nüfusa sahip olan Eskişehir kenti, ilk ve orta çağlarda "Dorylaion"ismi ile tanınmaktadır (Ulu, 2005). Eskişehir kimliğini oluşturan öğeler; Porsuk çayı, Tarihi Odunpazarı evleri, tren istasyonu, kaplıca tesisleri ve üniversitelerdir. Ayrıca kentte sanayi sayesinde görülen ivmeler de oldukça fazladır. Çimento, Basma, Şeker ve lokomotif fabrikaları kent için önemli gelişmelerin yaşanmasını sağlamıştır.

Şekil 1. *Eskişehir'in Türkiye'deki konumu (URL-1)*

Porsuk Çayı kentin birçok yerinden geçmektedir ve etrafında rekreasyon alanları oluşturulmuştur. Turistik bir kent olan Eskişehir geleneksel Türk evinin özelliklerini yansıtan Odunpazarı dokusuyla ve alanda bulunan müzeleriyle birçok şehirden ve ülkeden ziyaretçi çekmektedir. 2014 Türk Dünyası kültür başkenti olarak ilan edilen Eskişehir ayrıca kaplıcalarıyla da bilinmektedir.

1958 yılında kurulan Anadolu Üniversitesi Türkiye'de kurulan 7.üniversite olup kentin eğitim şehri olarak anılmasını sağlamış, sonrasında da

1. GİRİŞ

Mantarlar, yüzyıllar boyunca besleyici değerleri yüksek olması yanında sağlık üzerine de ilave faydalar sağladığından fonksiyonel gıdalar olarak değerlendirilmişlerdir. Geçmişten günümüze kadar birçok mantar çeşidi, farklı ülkelerde gıda ve halk hekimliğinde ilaç olarak kullanılmış ve halende kullanılmaya devam etmektedir. İnsanoğlunun mantarlarla ilk tanışması Paleolitik çağa kadar dayanmaktadır (Wani vd., 2010). İnsanlık avcılık ve toplayıcılık dönemlerinde bu mucizevi besin kaynağını fark etmiş ve günlük diyetlerinin ayrılmaz parçası haline getirmiştir. Paleolitik çağdan itibaren mantarlar kutsal gıdalar olarak anılmışlardır. Firavunlar mantarları lezzetli gıdalar olarak kabul etmiş, Romalılar mantarları ‘‘Tanrıların yiyeceği’’ olarak adlandırmış, Yunanlılar ise savaşçılara güç veren kutsal yiyecekler olarak görmüşlerdir. Günümüzde de mantar üretim ve tüketim konusunda liderliği bırakmayan Uzak Doğu Ülkelerinden biri olan Çin kültüründe ise mantarlar sağlıklı gıda ve yaşam iksiri olarak değerlendirilmektedir (Singh vd., 2021).

Bilinen en az 12000 mantar türü olmakla birlikte bunlardan yaklaşık 2000 tanesi yenilebilir ve insan tüketimi için güvenli kabul edilirler. Yenilebilir mantarlar içerisinde 100 tanesi ekonomik olarak değerli mantarlar olarak bilinmekte, yaklaşık 60 tanesinin de ticari olarak üretimleri yapılmaktadır. Günümüzde ise yaklaşık 10 tane mantar endüstriyel olarak yetiştirilmektedir (Gupta vd., 2016). Mantarlar genel olarak yenilebilir mantarlar, tıbbi mantarlar, zehirli mantarlar ve diğer mantarlar (özellikleri tam olarak belirlenmemiş mantarlar) olmak üzere dört kategoriye ayrılmaktadır (El Sheikha ve Hu, 2018). Yenilebilir mantarlar içinde de büyük bölümünü oluşturan Basidiomycota ve azınlıkta olarak Ascomycota olmak üzere 2 büyük grupta sınıflandırılabilir. Bu mantarlar organik maddelerce zengin ve humuslu topraklarda, nemli ağaç kabuklarında, çeşitli hayvansal ve bitkisel atık ve/veya artık kaynakları üzerinde bulunabilir veya bazıları kültüre alınıp yetiştirilebilir (Zied vd., 2011). Yenilebilir mantarlar (makromantarlar), yeraltı (hypogeous) veya yer üstünde (epigeous) yetişebilen kendine özgü fruktifikasyon gövdelerine sahip yaşam formlarıdır (Miles ve Chang, 2004). Mantarları gastronomik olarak da üstün kılan da söz konusu bu fruktifikasyon yapılarıdır. Doğadan toplanan mantarlar, insanlar için önemli gıda kaynaklarından bir tanesi olup, insanoğlunun alışılagelmiş mantar tüketim şeklini temsil etmektedir. Ancak doğadan toplanan mantarlarda en önemli mesele bazı yenilebilir mantarların zehirli olanlarından fiziksel olarak ayrımının zor olmasıdır. Mantar zehirlenmeleri önemli sağlık problemlerine sebep olmakla birlikte bazı cins ve türlerinin tüketiminde ölüm vakaları gözlenebilmektedir. Bu durum mantarların imajını zedelemekte ve tüketimi yaygınlaşamamaktadır. Bir diğer açıdan bakılacak olursa tüketim miktarlarının düşük olmasının bir diğer nedeni de

GİRİŞ

Ağrı bireyin hissettiği kompleks ve çok boyutlu haz vermeyen tecrübe olarak tanımlanmaktadır. Ağrı hissiyatının tanımlanması bireylerde önceki deneyimlerinden ve kişinin beklentilerinden etkilenmektedir (Koyama, McHaffie, Laurienti, & Coghill, 2005). Son zamanlarda yapılan çalışmalarda ağrının kortikal periferal ve spinal mekanizmaları hakkında önemli bilgilere ulaşılmıştır (Apkarian, Bushnell, Treede, & Zubieta, 2005; Mano et al., 2018). Ancak ağrının beyinde derecelendirilmesi için beyinde başlıca bir bölge bulunmamaktadır. Nörogörüntüleme çalışmaları sayesinde ağrının beyinde algılanmasında birden fazla subkortikal ve kortikal bölgelerin aktive olduğu gözlemlenmiştir (Ploner, Sorg, & Gross, 2017). Birincil somatosensöriyel korteks (S1),ikincil somatosensöriyel korteks (S2),anterior singulat korteks (ACC),prefrontal korteks (PFC),insular korteks, amigdala ve talamus bölgelerinin içinde bulunduğu kortikal ve subkortikal bölgeler ağrı algısı ile ilişkilendirilmiştir. Literatürdeki çalışmalarda ağrının beyinde algılanmasını tasvir eden 'ağrı matrisi' ya da 'ağrı yolağı' olarak adlandırılmıştır (Iannetti & Mouraux, 2010). Farklı ağrı çalışmalarında ağrının algılanması sürecinde beyinde ağrı yolağı diye isimlendirilen subkortikal bölgelerin aktivasyonuna değinilmiştir (Wu et al., 2020).

Elektroensefalografi (EEG) çalışmalarında tercih edilen yöntemlerden biri olmuştur. Ağrı çalışmalarında EEG'nin çok sık tercih edilmesinin nedeni ise iyi bir zamansal çözünürlüğe sahip olması ve kantitatif sonuçlara daha az maliyet ile ulaşılmasına olanak sağlamasıdır (Madeo, Castellani, Mocenni, & Santarcangelo, 2015).

Yapılan çalışmalarda EEG ile ağrının tahmini için iki yaklaşım tercih edilmiştir. İlk olarak EEG'den alınan verilerde frekans bantlarına odaklanılarak istatiksel farklar çıkarılmıştır. Bu sayede ağrının oluşması aşamasında farklılık gösteren frekans bantları belirlenmiştir (Gram, Graversen, Olesen, & Drewes, 2015). Alfa bandı (8-12 Hz) ağrı çalışmalarında kullanılan spektral belirteçler arasında yer almaktadır. Çalışmalarda ağrı esnasında somato-motor bölgesinde alfa bandındaki güç artışı gözlemlenmiştir (Furman et al., 2018). Alfa bandına ek olarak beta bandında (14-29 Hz) gözlemlenen güç değişimleri de akut ağrı ile ilişkilendirilmiştir (Misra, Wang, Archer, Roy, & Coombes, 2017; Nickel et al., 2017). Aynı zamanda EEG esnasında gözlemlenen kortikal bölgelere yayılan gamma bandında ki (30-100 Hz) güç artışı akut ağrı uyaranın derecesi ile doğrusal bir ilişkiye sahiptir (Schulz et al., 2015). Özellikle ağrı uyaranın şiddeti arttırıldığında frontal bölgelerde gamma bandındaki güç artışı oranının daha fazla olduğu sonucuna ulaşılmıştır (Schulz et al., 2015). Akut ağrı uygulamalarında gözlemlenen bir diğer spektral özellik ise teta bandı (3-7 Hz) olmuştur. Bir diğer çalışmada, ağrı uyaranı verildikten sonra prefrontal bölgelerde teta bandında güç artışı gözlenmiştir (Reches et al., 2016).

GİRİŞ

Ocak 2021'de interneti kullanan kişi sayısı 4,66 milyardır (Karnik, 1999). İnternetin günlük hayatımızın içinde olmasının sağladığı avantajların yanında, siber tehditlere açık olması dezavantajıdır. Yanlış bilgilerin yayılması, bilgisayar korsanlığı, hizmet(ler), makine(ler) veya ağ(lar)ın meşru kullanıcıları tarafından kullanılamaz hale getirilmesi gibi birçok suç internet üzerinden çoğalmıştır. Kullanıcı ve sistem bilgilerinin herkesin erişebileceği noktada olması, siber suç işleyen kişi ya da gruplar için avantajdır. Bilgilerin korunmasının yanında, hizmet sağlayan sistemlerin sürekli erişilebilir olması hem kullanıcılar hem de sistem yöneticileri açısından büyük önem taşımaktadır. Son zamanlarda Sony, Verizon, Yahoo, Target, JP Morgan, Ashley Madison gibi dev şirketleri ve devlet kurumlarını hedef alan siber saldırılar yaygınlaşmıştır. Siber saldırılar, kullanıcıların özel bilgilerinin sızmasına, can kayıplarına ve kritik altyapıların tahrip olmasına neden olmaktadır. Bu saldırıların en önemlilerinden biri de Hizmet Reddi (Denial of Service – DoS) ve DDoS saldırılarıdır (Balaban, 2021). DoS saldırıları, aynı anda bir hedefe çok sayıda istek gönderilmesi nedeniyle birçok kaynak (örneğin bellek, CPU zamanı) tüketildikten sonra gerçekleşir. Bu nedenle, hizmeti yasal kullanıcılar için kullanılamaz hale getirir. DoS saldırıları yerine, birden fazla cihaz veya bilgisayar aynı anda büyük miktarda hizmet talebi oluşturduğunda DDoS saldırıları meydana gelmektedir (Kaur ve diğerleri, 2017).

Estonya'da 2007 yılında yaşanan DDoS saldırısı Estonya'da yaşayan Ruslar ve Estonya hükümeti arasındaki siyasi huzursuzluk sebebiyle başlamıştır. Saldırılar başbakan, parlamento ve çeşitli bakanlıklar dahil olmak üzere altyapının birçok bölümünü etkilemiştir (Padhye ve diğerleri, 1999). Ekim 2016'da Amerika'da bulunan DNS servis sağlayıcısı Dyn'e yapılan DDoS saldırısı bütün dünyada yankı uyandırmıştır. Daha sonra 2018 yılında bilinen en büyük DDoS saldırısı Github sunucularına yapılmıştır. Saldırı sırasında, saniyede 126.9 milyon paketle 1.35 Tbps'ye ulaşan trafik kaydedilmiştir. Sadece Avrupa ve Amerika'da değil 2019 yılında Türkiye'de, Türk Telekom ve Vodafone servis sağlayıcıları tarafından altyapı desteği verilen Garanti Bankası sunucuları DDoS saldırısına uğramıştır. Saldırı süresi boyunca Garanti Bankasına ait web sitesi, ödeme sistemleri görev yapamamıştır. Şubat 2021'de, kripto para borsası olan EXMO, saniyede 30 GB trafik ile yönetilmiş ve 2 saat boyunca kullanılamamıştır (Samsoerizal ve diğerleri, 2007). NETSCOUT'un ATLAS Güvenlik Mühendisliği ve Müdahale Ekibi'ne (ASERT) göre, 2021'in ilk çeyreğinde tehdit aktörleri tarafından yaklaşık 2,9 milyon DDoS saldırısı başlatıldı ve bu, 2020'deki aynı zamana göre %31'lik bir artıştı (Ademola ve diğerleri, 2021).

Kaspersky şirketinin araştırmasına göre, bir DDoS saldırısı, küçük işletmeler için ortalama 120.000 dolar ve büyük işletmeler için ortalama

İMALAT İŞLETMESİNDE SİMÜLASYON YARDIMIYLA ÜRETİM SÜRECİ İYİLEŞTİRME

Abdulla SAKALLI[1] , Muhittin DÖNER[2]

1 Doç. Dr., İskenderun Teknik Üniversitesi, Mühendislik ve Doğabilimleri Fakültesi, Endüstri Mühendisliği Bölümü, E-mail: abdulla.sakalli@iste.edu.tr
2 İskenderun Teknik Üniversitesi, Mühendislik ve Doğabilimleri Fakültesi, Endüstri Mühendisliği Bölümü, E-mail: muhyittindoner20@gmail.com

1. Giriş

İşletmeler günümüz rekabet koşullarında kaliteli ürünü, maliyeti en düşük şeklinde üretmek istemektedirler. Üretim sürecine bakıldığında genel olarak işletmeler sektöre bağlı olarak üretimin sürekli üretim, kesikli üretim ya da siparişe göre üretim olarak süreci tasarlarlar. Bu süreçlere bakıldığında çelik boru üretimi yapan işletmelere farklı çeşitlerde boru üretiklerinden her bir borunun üretim sürecinin farklı olduğu ve seri üretim yapıldığı bilmektedir. Bu yüzden bu işletmeler esnek üretime sahip üretim planlamaktadırlar. İşletmeler kârlaını artırmak amacıyla üretim hacmini ve kapasitesini genişletmek isterler. İstenilen ürünün kaliteli, tam zamanında ve maliyeti en düşük şekilde teslim etmek yeni teknolojiye ayak uydurmakla birlikte oluşmaktadır. Bunun yanında üretim hattında görev alan makineler dışında insan gücü, üretim hattının başındaki stok durumu, fabrikanın kapasitesi gibi birçok etken kontrol edilmesi ve birbiri ile verimli şeklide çalışması gerekmektedir. Bu birlikteliği bir simülasyon yardımı ile analiz edip bilgisayar yardımıyla üretim sürecini incelemeyi ve çözümlemeyi ve sadece üretim hacminin büyümesi değil üretim akışını bozan verimliği düşüren sorunların tespitinde de simülasyon yardımı ile çözümlere ulaşmayı planlamaktadır. Simülasyon firmaların yapacağı devasa yatırımlarda önceden işleyip işlenmeyeceğini bilgisayar üzerinden tahmin etmekte ve üretimi aksatan durumları tespit etmek amacıyla kullanılan bir programıdır. Günümüzde bilgisayar simülasyonu, birçok üretim organizasyonunda, üretim sisteminin ilgilenilen problemini tasarlamak, geliştirmek, uygulamak ve analiz etmek için kullanılmaktadır.

Literatürde yer alan çeşitli performans tespit yöntemleri ile süreç iyileştirme ve bunların simülasyonla yardımıyla yapılmasına yönelik birçok çalışma yapılmıştır.

Bir tekstil fabrikasında yapılan süreç iyileştirmede işgücü malzeme ve teçhizatın istenilen kapasiteye ulaştırmak amacıyla yapılan çalışmalarda fabrikanın istenilen verimlilikte çalışmasına engel olan darboğazların tespit edilip ortadan kaldırılması için simülasyon çalışması yapılmıştır. Çalışmada mevcut durumla gelecek durum karşılaştırılmış çıkan sonuçlarda ek kaynaklara ihtiyaç duyulmadan mevcut sistem üzerinde çalışmalar yaparak gelecek durumun şimdiki durumdan %47 oranda daha fazla ürün üreteceği tespit edilmiştir [1]. Bir başka çalışmada ise, elektrik motoru üreten firmada yarı mamul üretim hattının süreç iyileştirmesi ve performans artışının sağlaması amacıyla Anylogic yazılımı kullanarak kesikli olay simülasyonu modeli geliştirilmiştir ele alınan hatta 8 makine 11 operatör kaynağı kullanılarak akış tipi üretim gerçekleşmiştir. Modelde darboğazları tespit etme, üretim kullanılan kaynakları maksimize etme ve stok maliyetlerini minimize ederek hattaki üretim akışını verimli hale getirmeyi amaçlanmıştır. Bu çalışmayı yaparken geçmiş bir yıllık verilerden yarar-

KRİPTO MADENCİLİĞİNE GÜNEŞ ENERJİSİ DESTEĞİNİN TEKNO-EKONOMİK ANALİZİ

Ali Murat ATEŞ[1]

1 Dr. Öğrt. Üyesi, Manisa Celal Bayar Üniversitesi, ORCID ID: 0000-0002-2815-1404

1. Giriş

Para terimi, mal ve hizmetlerin takasında kullanılan bir değişim aracı olarak kullanılmaktadır. İlk zamanlarda insanlar ihtiyaçlarını mal ve hizmetlerin doğrudan takası yöntemi ile karşılamıştır. İlerleyen zamanlarda alış-verişler bakır, tuz, inci, köle gibi emtia parayla yapılmaya başlanmıştır. Daha sonraları değişim aracı olarak altın ve gümüş gibi değerli madenler kullanılmaya başlanmıştır. M.Ö. 3200'lerde Mısır'da alış-veriş aracı olarak altın çubuklar kullanıldığı ve M.Ö. 7. Yüzyılda da Lidyalıların altın sikkeler bastırarak günümüzdeki anlamıyla ilk parayı icat ettikleri bilinmektedir. İlerleyen zamanda para, altın karşılığı olan değerli kağıtlara ve daha sonra da karşılığı bulunmayan ve değeri, bastırana karşı güvene dayalı olan itibari paraya dönüşmüştür. Bilişim teknolojilerinin hızla ilerlemesi sonucu sanallaşmaya doğru evrilen dünyada para da sanal hale gelmiştir (Çarkacıoğlu, 2016).

Günümüzde bankacılık işlemlerinde çeşitli kartlar ile yapılan ödemeler ya da transferlerde kullanılan para bankacılık sistemi içerisinde bir merkezden, işlemi gerçekleştiren kişilerin kimlik bilgileri ile kayıt altına alınmakta, kontrol edilebilmekte ve istendiğinde iptal edilebilmektedir. Üstelik yapılan işlemlerden komisyon ve vergi alınabilmekte ve uluslararası yapılan bazı işlemler çok uzun zamanlar alabilmektedir. Ayrıca bu paranın değerinin de bir otorite tarafından belirlenebilmesi piyasada kullanılan bu paraya karşı olan güveni de sarsabilmektedir. İşte tam bu noktada merkezi bir otorite tarafından yönetilemeyen ve blok zincir şeklinde kriptografik bir alt yapıyla işlemlerin peer-to-peer (p2p) yürütüldüğü bir sanal para birimi 2008 yılında Satoshi Nakamoto tarafından Bitcoin adıyla duyurulmuştur (Khalilov, Gündebahar ve Kurtulmuşlar, 2017).

Bitcoin, bilgisayar ve akıllı telefonlar gibi birçok cihazda çalışan, açık kaynak kodlu bir yazılımdan oluşan ve fiziksel karşılığı olmayan bir kripto varlıktır. İşlem maliyetlerinin düşük olması, dünya çapında hızlı transferinin yapılabilmesi, varlık ve hizmet alımlarında kullanılabilmesi gibi sebeplerden dolayı Bitcoin giderek yaygınlaşarak dünya çapında bir para birimi olarak sayılmaya başlamıştır (Antonopoulos, 2014). Bitcoin'in piyasaya sürülmesinin ardından Ethereum, Litecoin gibi binlerce kripto para daha piyasaya sürülmüştür. Tüm bu kripto para birimleri blok zinciri alt yapısını kullanırlar.

Blok zincirleri açık (herkese açık, izin gerektirmeyen), özel (kapalı gurup, izinle girilen), ve konsorsiyum (tek kişi ya da otorite tarafından değil bir gurup tarafından yönetilen) olmak üzere 3 farklı alt yapıda kurulabilir (Dattani ve Sheth, 2019; Ünal ve Uluyol, 2020). Bitcoin ve Ethereum gibi alt yapılar herkese açık olan blok zinciri örnekleridir. Blok

BİYOTİKLERİN ÖNEMİ VE SÜT SANAYİNDE KULLANIM OLANAKLARI

Vildan AKDENİZ[1]

1 Dr., Ege Üniversitesi, Ziraat Fakültesi, Süt Teknolojisi Bölümü, ORCID: 0000-0002-2288-7832

GİRİŞ

Bağırsak bariyeri, bağırsağı istila eden zararlı mikroorganizmalara ve antijenlere karşı ilk savunmadır. Esas olarak goblet hücreleri tarafından üretilen bir mukus tabakasından ve ardından epitelyal sıkı bağı oluşturan tek tabakalı epitel hücrelerinden oluşan çok katmanlı bir sistemdir. Bağırsak bağışıklık sistemi ve mikrobiyota, bağırsak bariyer fonksiyonunun kritik bileşenleridir (Gao vd., 2019). Bağırsak mikrobiyotası, konağın mukozal bağışıklık sisteminin fizyolojisini ve patolojisini etkileyen metabolik bir aktivite ile bağırsağı kolonize eden büyük bir bakteri topluluğudur. Bağırsak bakterilerinin insan sağlığını geliştirmede yararlı etkileri olmasının yanısıra, koruyucu ve zararlı mikroflora bileşenlerinde dengesizlik olduğu durumlarda iltihabi bağırsak hastalıkları (Crohn hastalığı ve ülseratif kolit), huzursuz bağırsak sendromu, kolorektal kanser gibi bağırsak hastalıklarının, tip 2 diabet, karaciğer yağlanması, obezite gibi metabolik hastalıkların ve hatta Alzheimer, Parkinson gibi otoimmün hastalıkların ortaya çıkmasına neden olmaktadır (Alonso vd., 2013). Bağırsak mikrobiyotası 400'den fazla bakteri türünün bulunduğu tahmin edilen, insan sağlığı üzerindeki etkisinin giderek daha iyi anlaşıldığı çok çeşitli ve nispeten istikrarlı aynı zamanda karmaşık ve dinamik bir mikrobiyal ekosistemdir (Domingo, 2017). Son yıllarda yapılan çalışmalar mide-bağırsak sistemi mikrobiyotasının vücudun bağışıklık sistemi ve strese adaptasyonunda anahtar bir role sahip olduğunu, fizyolojik süreçlerin homeostazını korumada ve hastalıkları önlemede etkili olduğunu göstermektedir. Beslenme biçimimiz, bağırsak mikrobiyotasının bileşimi ve işlevselliği üzerinde önemli bir etkiye sahiptir (Rosa vd., 2021).

Besinler, açlığımızı gidermesinin ve temel beslenme gereksinimimizi sağlamasının yanısıra, beslenme ile ilgili hastalıkların ortaya çıkmasını engellemeye de yardımcı olmaktadır. Bu sebeple, sağlık bilincine sahip tüketiciler tarafından fonksiyonel gıdalara yoğun bir talep bulunmaktadır. Yararlı mikroorganizmaların insan sağlığındaki rolü uzun yıllardır bilinmektedir. Bununla birlikte yalnızca canlı hücreler veya bunların metabolitleri değil, aynı zamanda cansız hücrelerin de insan sağlığını geliştirici etkileri olduğu ortaya çıkmış ve bu konudaki çalışmalar giderek önemini arttırmıştır. Bu çalışmalar sonucunda çeşitli fonksiyonel biyotik kavramlara göre sınıflandırmalar ortaya çıkmış ve biyotikler genel olarak probiyotikler, prebiyotikler, sinbiyotikler, postbiyotikler, parabiyotikler ve psikobiyotikler olarak sınıflandırılmıştır (Nataraj vd., 2021).

Probiyotikleri, prebiyotikleri, sinbiyotikleri, postbiyotikleri, parabiyotikleri ve psikobiyotikleri içeren fonksiyonel gıdalar hem tarım-gıda endüstrisi hem de tüketiciler ve halk sağlığı için büyük bir potansiyele sahiptir. Günümüzde biyotikler, genel fonksiyonel gıda pazarının önemli bir kısmını oluşturan fermente süt ürünleri başta olmak üzere dondurma,

OTOMOTİV ÜRETİMİ SÜREÇLERİNDE PARETO ANALİZİ VE HTEA KULLANARAK KALİTE İYİLEŞTİRME

İrem DÜZDAR ARGUN[1], Enes GÜRSOY[2]

1 Dr. Öğr. Üyesi, Düzce Üniversitesi, Endüstri Mühendisiği, Konuralp, Düzce ; 0000-0002-7642-8121
2 Düzce Üniversitesi, Endüstri Mühendisiği, Konuralp, Düzce

1.Giriş

Toplam kalite yönetiminin önemli unsurlarından biri de ticari işletmelerde ürün ve hizmet kalitesini ekonomik ilkeler çerçevesinde sürekli iyileştirmeye çalışmaktır. Ürün ve hizmetlerin ortaya çıkarıldığı iş süreçleri bu anlayışla ele alınmakta ve çeşitli yöntemler uygulanarak bu süreçler iyileştirilmeye çalışılmaktadır. ISO (Uluslararası Standardizasyon Örgütü) kalite iyileştirme tanımı, hem şirkete hem de müşterilere ek faydalar sağlamak için faaliyetlerin ve süreçlerin etkinliğini artırmak için kuruluş genelinde alınan önlemler olduğunu belirtir (Hoyle, 2000). İstenilen kalite düzeyinin sağlanması ve üretim süreçlerindeki belirsizliklerin incelenmesi açısından kalite iyileştirme tekniklerinin kullanılması önemlidir (Adam, 1994). Rekabetin üst düzeyde yaşandığı günümüz dünyasında, işletmeler mevcut kalite düzeylerini iyileştirmeye ve bunu istenilen düzeyde tutmaya çok daha fazla önem vermeye başlamışlardır. Rekabet ortamının getirdiği bu gereklilik, kalite iyileştirme tekniklerinin kullanımını artırmıştır. Kalitenin günümüzdeki tanımına gelince; belirsizlikle ters orantılı bir kavramdır. Kalite iyileştirme, ürün ve süreçlere ilişkin bu tür belirsizlikleri belirlemeye ve azaltmaya yönelik faaliyetler olarak tanımlanabilir (Montgomery, 2001). Süreçlerdeki belirsizliği ve değişkenliği belirlemek ve azaltmak için çeşitli teknikler vardır. Ishikawa, bir ticari girişimdeki sorunların önemli bir kısmının yedi temel kalite kontrol tekniği ile çözülebileceğini savunuyor. Pareto Analizi, Sebep-Sonuç Diyagramı, Histogram, Frekans Dağılımı, Dağılım Diyagramı, Gruplama ve Kontrol Grafiği (Özcan, 2001; Işığıçok, 2005) problemlerin çözümünde en yaygın olarak kullanılan temel tekniklerdir. Bir üründe veya süreçte meydana gelmesi muhtemel tüm hataların aynı derecede önem taşıdığı söylenemez. Pareto analizinin hedefi, alınacak önlemlerin ve yapılacak faaliyetlerin en verimli noktalarda yoğunlaşmasını sağlayarak önemli hata modlarının tespiti konusunda kalite kontrol faktörlerine öncülük etmektir (Kobu, 1987). Hata türleri ve etkileri analizi (HTEA-FMEA), ürün geliştirme, hizmet, sistem ve süreçlerin iyileştirilmesine yönelik hata türlerini belirlemek ve sınıflandırmak için kullanılan bir yöntemdir (Eleren, 2007). ABD Otomotiv Mühendisleri Birliği'ne göre FMEA, bir sistemin, bir alt sistemin veya bir fonksiyonun olası arıza modlarını, bunların nedenlerini ve etkilerini, sistemin arıza modlarının oluşumunu kalitatif açıdan dikkate alarak analiz eden bir yapı olarak tanımlanmaktadır (Aksay ve diğerleri, 2009).

Çalışmanın amacı, temel kalite iyileştirme tekniklerinin birçok ticari işletmenin sorunlarının incelenmesi ve bu tür sorunlara yönelik çözümlerin belirlenmesinde hala önemli bir rol oynamaya devam ettiğini vurgulamaktır. Uygulama bölümünde gerçek bir endüstriyel problem incelenmekte ve problemin oluşum nedenleri tartışılarak önerilerde bulunulmaktadır.

MADEN YATAKLARININ İNCELENMESİNDE KULLANILAN BAZI DURAYLI İZOTOPLAR VE ÖZELLİKLERİ

Nevin KONAKCI[1]

1 Arş.Gör.Dr., Fırat Üniversitesi Jeoloji Mühendisliği, ORCID-ID 0000-0002-0163-0966

1. Genel Kavramlar

Proton sayıları aynı fakat nötron sayıları farklı atomlara o elementin izotopları denir. İzotoplar, radyoaktif ve duraylı (kararlı) olmak üzere iki gruba ayrılmaktadır. Radyoaktif izotoplar, radyoaktif bozuşma yoluyla başka bir elemente dönüşen izotoplardır. Bu tür izotoplar kayaçların yaş tayinlerinde kullanılırlar. Duraylı izotoplar ise radyoaktif bozuşma göstermeyen izotoplardır.

Oksijenin izotopları ^{16}O, ^{17}O ve ^{18}O ; hidrojenin ^{1}H ve ^{2}H (D); karbonun ^{12}C ve ^{13}C; kükürtün ^{32}S, ^{33}S, ^{34}S ve ^{36}S; azotun ise ^{14}N ve ^{15}N' tir. Duraylı izotoplar, zamana bağlı olarak değişmedikleri için jeolojik olayların gelişimde önemli bir faktörlerdir. Örneğin maden yataklarını oluşturan çözeltilerin hangi kaynaktan geldiğini gösterirler.

Herhangi bir elemente ait izotopların (örneğin ^{16}O, ^{18}O; ^{32}S, ^{34}S), o elementi barındıran bileşikler içerisindeki (H_2O; FeS_2) bolluk derecelerinin değişim göstermesine izotop farklılaşması denir. Bu nedenle, bu duraylı izotoplar maden yataklarının oluşumunu inceleyen çalışmalarda çok önemlidir. Bir ortamda izotop oranları standarta göre oranlanıp farklılaşma bulunduktan sonra farklılaşmanın cinsine ve miktarına göre yorum yapılmaktadır. Duraylı izotop analizleri kütle spektrometresi ile yapılır ve analizi düşünülen izotopların analiz edilen örnek içindeki konsantrasyonları ölçülür. Veriler δ ile gösterilir, analiz edilen izotoplardan ağır olanının cinsinden yazılır ve ‰ olarak gösterilir. İzotop verileri belirli bir standarda bağlı olarak ifade edilir ve bu standart analiz edilen elemente göre değişir. Buna göre izotop değerleri şu şekildedir:

$$\delta = \left(\frac{R_{örnek}}{R_{s\tan dart}} - 1 \right) * 1000$$

H, C, O ve S gibi elementlerin izotoplarının, bileşikleri içerisindeki bolluk dereceleri kolaylıkla değişim gösterir, bu nedenle izotop çalışmalarında en fazla kullanılırlar. Sularda bulunan oksijen ve dötoryum izotop oranları suların kaynağını ve kökenini belirlemede kullanılır. Özellikle kökeni belirgin olmayan hidrotermal çözeltilerin kökenini hakkında fikir verirler. Hidrojen için SMOW standartı kullanılır, oksijen için ortalama okyanus suyu (SMOW) ve PeeDee Belemnitella (PDB), kükürt için ise Canyon Diablo demirli meteoritinden alınan troilit (FeS) analizlerde kullanılan standartlardır.

GİRİŞ

Son zamanlarda, makine öğrenimi dikkate değer bir oranda büyüyerek çok sayıda araştırmacı ve uygulayıcıyı kendine çekmiştir. En popüler araştırma yönlerinden biri haline geldi ve makine çevirisi, konuşma tanıma, görüntü tanıma, öneri sistemleri vb. gibi birçok alanda önemli bir rol oynuyor. Optimizasyon, makine öğreniminin temel bileşenlerinden biridir. Çoğu makine öğrenimi algoritmasının özü, bir optimizasyon modeli oluşturmak ve verilen verilerden amaç fonksiyonundaki parametreleri öğrenmektir. Muazzam veri çağında, sayısal optimizasyon algoritmalarının etkinliği ve verimliliği, makine öğrenimi modellerinin yaygınlaşmasını ve uygulanmasını önemli ölçüde etkiler. Makine öğreniminin gelişimini desteklemek için, makine öğrenimi yöntemlerinin performansını ve verimliliğini artıran bir dizi etkili optimizasyon yöntemi ortaya atılmıştır. Gerçek dünya eğitiminde, Derin modeller akademisyenler ve araştırmacılar için verimli bir şekilde en önemli zorluklardan biri olmaya devam etmektedir (Maulud & Abdulazeez, 2020; Reisizadeh vd., 2019; J. Zhang, 2019; T. Zou & Sugihara, 2020). GD optimizasyon algoritması, Machine Learning (ML) ve Deep Learning (DL) modellerinin eğitiminde önemli bir rol oynar. Verimliliğini daha da artırmak için son yıllarda birkaç yeni varyant algoritması geliştirilmiştir (Lu & Jin, 2017; Yi vd., 2019; Zebari, Zeebaree, Abdulazeez, vd., 2020). Makine öğrenimi (ML), bilgisayar sistemlerinin belirli bir görevi gerçekleştirmek için açıkça programlanmadan (Abdulazeez vd., 2021; Hallen, 2017; Zeebaree vd., 2019b, 2021) anlamasını mümkün kılan bir bilgisayar bilimi alanıdır. Makine Öğreniminde bir maliyet fonksiyonu eklemek, makinenin sonuçlar için uygun ağırlık değerleri bulmasını sağlar (Adeen vd., 2020). Öte yandan Derin Öğrenme (DL), derin ağları kullanarak bilgi alma ile ilgilidir (Jahwar & Abdulazeez, 2020; Kamsing vd., 2020; Omar vd., 2020; Zeebaree vd., 2017). Genel olarak optimizasyonun amacı, çözümü kolaylaştıran fonksiyon parametresini tanımlamaktır. Birçok makine öğrenimi algoritmasının arkasında yatan zor bir konudur (Eesa vd., 2015; Sadeeq & Abdulazeez, 2018; Zebari, Zeebaree, Abdulazeez, vd., 2020). Gradient Descent (GD) algoritması gibi bazı optimizasyon algoritmaları, maliyet işlevini en aza indirerek ağırlıkları sınıflandırabilir. Şimdiye kadar GD, en yaygın optimizasyon algoritmalarından biridir ve sinir ağlarını optimize etmenin en popüler yöntemidir. GD, yerel bir minimumda ayrı bir rol bulmaya çalışır. Bir fonksiyonun kayıp fonksiyonunu mümkün olduğunca azaltan parametrelerinin (katsayılarının) değerlerini bulmak için kullanılır Othman & Zeebaree, 2020). .Algoritmanın performansını en üst düzeye çıkarmak için kullanılabilecek GD yaklaşımına bağlı birkaç değişken de vardır.

Bu kitap bölümünde, okuyucuya çok sayıda GD tabanlı optimizasyon

BÖLÜM 10

DÜNYADA TÜRK MERMERLERİNİN YERİ VE ÖNEMİ

Esma KAHRAMAN [1]

1 Dr., Çukurova Üniversitesi, Maden Mühendisliği Bölümü ORCID: 0000-0002-4326-7202

1. GİRİŞ

Bilimsel olarak mermer; kalker ve dolomitik kalkerin ısı ve basınç altında metamorfizma geçirerek yeniden kristallenmesi sonucu oluşan kayaçlardır. Ticari tanımı ise mermer; kesilip parlatılarak satılabilen her türlü kayaç olarak adlandırılmaktadır (Köse ve Onargan, 1992).

Mermerler görünüşleri, renkleri, yapısal-dokusal özellikleri, gösterişli ve dayanıklı olması sebebiyle çok eski zamanlardan beri yapılarda, görsel sanatlarda ve özel mimarilerde yaygın olarak kullanılan en önemli hammaddelerdendir.

Selçuklu ve Osmanlı mimarisinde mermer; mimari yapılarda kubbe, sütun, sütun başlıkları, duvar-zemin-iç mekan kaplama, taç kapı, minber, mihrap, basamak, korkuluk, çeşme, havuz ve kitabelerde kullanıldığı görülmektedir (Çelik, 2003; Şimşek ve Kaynar, 2011). Şekil 1'de Osmanlı döneminde yapılan Dolma Bahçe Sarayı'na ait bir görüntü görülmektedir.

Şekil 1. *Dolmabahçe Sarayı mermer uygulaması (Beşkonaklı, 2017)*

Cumhuriyetin ilk dönemlerinde ise İstanbul ve Ankara gibi büyük şehirler başta olmak üzere pek çok bina inşasında kullanılmıştır (Çelik, 2003). Günümüzde de mermerin yapılarda kullanımı giderek artan oranlarda devam etmektedir. Ayrıca endüstriyel gelişmeler ve artan nüfus ile birlikte mermere olan talep son yıllarda yükselişe geçmiştir. Bu durum üretim miktarını ve ihracat gelirlerini arttırmıştır.

Ülkemiz mermerleri dünya genelinde nadir bulunmaktadır. Dünya mimarisinde de önemli yere sahip olan mermerlerimiz iç ve dış pazarda oldukça önemli gelir kaynağıdır.

FİLAMENT SARMA TEKNOLOJİSİNİN TEMELLERİ VE ELYAF TAKVİYELİ PLASTİK KOMPOZİTLERİN İŞLENMESİ

Evren ÇAĞLARER [1]

1 Dr.Öğr.Üy.,Kırklareli Üniversitesi, Teknoloji Fak., Mekatronik Müh., ORCID ID:0000-0002-1343-4751

1. Giriş

Çeşitli sektörlerdeki teknolojik gelişmeler, geleneksel malzemelerin hizmet veremediği, yüksek basınç ve sıcaklıkta, yüksek derecede aşındırıcı ortamlarda, yüksek mukavemet gereksinimi olan zorlu koşullarda performans göstermeleri gereken daha yeni malzemeler için talep yarattı. Bu, özelleştirilmiş ihtiyaçları karşılamak için mühendislik malzemeleri geliştirme ihtiyaçlarını tetikledi. Endüstri, kompozit malzemelerin yüksek kaliteli, dayanıklı, uygun maliyetli ürünler üretme yeteneğini kabul etmiştir. Aslında binlerce yıldır var olan "kompozitler" 'in endüstriyel dünyaya girişi yüzyıldan kısadır. Bilinen ilk polimer matrisli kompozit ürün, 1930'lu yılların ortalarında, köpük bir kalıba yerleştirilmiş fiberglas kumaş ve polyester reçine kullanılarak yapılan bir tekne gövdesidir. Böyle bir başlangıçtan itibaren kompozit uygulamalar, havacılık, denizcilik ve elektrik, kimya, ilaç, ulaşım vb. dahil olmak üzere tüm endüstrilerde devrim yarattı.

Kompozitler, yüksek basınçlı altında yapılan kimyasal işlemlerde diğer geleneksel malzemelere göre güçlü bir alternatif oldular. Kompozit malzemeler, üstün korozyon direncinin yanı sıra, özellikle endüstriyel ortamlarda aşırı sıcaklıklara ve aşınmaya (özellikle termoplastik kompozitler) karşı iyi direnç gösterirler.

Kompozit, iki ya da daha fazla malzemenin bir araya gelmesiyle oluşur. Bir araya gelen malzemelerin birbirleri arasında kimyasal bağ yapma zorunluluğu vardır, aksi halde oluşan malzeme birleştirilmiş malzemedir. Matris olan malzeme ana gövdeyi oluştururken, takviye malzeme temel yük taşıyan elemanlar olarak çok yönlü dayanım sağlarlar. Bu malzemelerin bağlanma noktasında arayüz denen bir bölge bulunur. Eğer birleşen bu iki malzeme kimyasal bağ yapamıyorsa, arayüz için başka bir maddeye ya da maddelere ihtiyaç vardır.

Kompozitler, kullanılan matris tipine göre; polimer matrisli, metal matrisli ve seramik matrisli olarak adlandırılırlar. Takviyeler çeşitli şekillerde, kısa ve uzun elyaflar, parçacık, pul, pudra ya da küresel grafit olabilir. Arayüz olarak, çoğunlukla doğal veya sentetik reçineler, yağlar ve yapıştırıcılar kullanılır.

Elyaf Takviyeli Plastik Kompozitler (FRPC), konvansiyonel malzemelere göre birçok alanda üstünlüğüne sahiptir. Bunlar, yüksek mukavemet ve sertlik, mukavemet-ağırlık ve sertlik-ağırlık oranları, boyutsal kararlılık, yorulma mukavemeti, darbe ve korozyon direnci bunlardan bazılarıdır. Ayrıca plastik kompozitler daha ucuz ve plastiklerin yapısı gereği daha geniş üretim imkanına sahip olduklarından, çeşitli katkı maddeleriyle UV dayanımı, alev geciktiricilik, düşük termal genleşme katsayısı, kimyasallara ve korozyona direnç, hafiflik, pürüzsüz nihai ürün ve renk avantajlarına da sahiptirler (Chung,2010).

1.GİRİŞ

İnsanlığın en temel ihtiyaçlardan birisi olan beslenme ihtiyacı beraberinde bazı sorunları da ortaya çıkarmaktadır. Bu sorunlardan birisi de yiyeceklerin bozulmadan muhafaza edilebilmesidir. Yiyeceklerin bozulmasını önlemek ya da geciktirebilmek için soğuk ortamda muhafaza edilmesi önemli bir seçenek olarak karşımıza çıkmaktadır. Bazı ürünlerin soğuk muhafazası için buz kullanımı çokça tercih edilen bir yöntemdir. Gelişen bilim ve teknoloji, buz üretiminin yapay yollar ile gerçekleştirilmesine imkân vermiştir. Buz, suyun düşük sıcaklık şartlarında donması sonucu oluşmaktadır. Günümüzde buz makineleri ile üretilen buz sayesinde gıda sektöründe depolama süreçleri kolaylaşmıştır. Suyun dondurularak buz haline getirilmesi sadece gıda sektörü için değil iklimlendirme sistemleri için de bir yöntem olarak karşımıza çıkmaktadır. Balıkçılık, ilaç ve kimya sanayi gibi birçok farklı alanda da buz yapımından yararlanılmaktadır. Endüstride bazda üretilen çeşitli buz tipleri bulunmakta olup, bunlar Tablo 1'de sunulmuştur (Kocatepe ve ark., 2010).

Tablo 1. Endüstride bazda üretilen çeşitli buz tipleri ve açıklamaları

Türü	Açıklama
Yaprak Buz	Silindirin dış yüzeyinde su püskürtülmesi sonucu meydana gelen buzlardır. 2-3mm boyutlarındadır.
Tüp Buz	İçerisi dolu olmayan silindirik yapıdaki tüplerde üretimi gerçekleşen buzlardır. Bu buzlar sıcak gaz tekniği ile tüplerden çıkarılmaktadırlar.
Plaka Buz	Yatay plakanın yüzeyinde oluşturulan buz türüdür. 10-12 mm boyutlarındadır
Bulamaç Buz	Mikro kristal şeklinde buz parçacıkları bulunduran buz türüdür. Bu buz türü su ile donma derecesi düşük olan solüsyonun meydana getirdiği buz olarak da tanımlanabilmektedir.
Külçe Buz	Bu buzun üretiminde kullanılan makinede çelik malzemesinden iki konik biçimli kısım vardır. Su tüpün iç kısmından geçtiği esnada soğutucu da dış cidarda bulunmaktadır. Böylece içeride bulunan su donar. İstenen kalınlığa gelen buz, su girişi durdurulduktan sonra kalıp içine sıcak gaz iletilerek alınmaktadır.
Pelte Buz	Dondurulan madde bir kimyasaldır ve bu kimyasalın dondurulması ile oluşan buz türüdür.
Kuru Buz	Karbondioksitten elde dilen buz türüdür. Bu buz türünün sıcaklığı -78.9 derecedir.
Hızlı Blok Buz	Su dolu tüplerin çevresinden soğutucu dolaştırılıp hızlı bir şeklide buz oluşumu elde edildiği için bu isimle adlandırılmıştır.

Günlük hayatta birçok yerde kullanılan buz makineleri özellikle sıcak iklime sahip bölgelerde gıda sektöründe, endüstriyel mutfaklarda tercih

TEDARİK ZİNCİRİ TASARIMINDA MODELLEME YAKLAŞIMLARI VE SİMÜLASYON[1]

Gülnihal AKAN ÖZKÖK[2]

1 Bu çalışma künyesi verilmiş olan doktora tezinden üretilmiştir. Tedarik Zinciri Tasarımı ve Yönetiminde Simülasyon Uygulamaları ve Jenerik Simülasyon Modeli Önerisi, Maltepe Üniversitesi Lisansüstü Eğitim Enstitüsü, Uluslararası Ticaret ve Lojistik Anabilim Dalı, Lojistik ve Tedarik Zinciri Doktora Programı, Doktora Tez Danışmanı, Dr. Öğretim Üyesi Halil Halefşan SÜMEN, 2022.

2 Dr. , Maltepe Üniversitesi İşletme ve Yönetim Bilimleri Fakültesi, Uluslararası Ticaret ve Lojistik (İngilizce) Bölümü Araştırma Görevlisi, gulnihalakan@maltepe.edu.tr, ORCID: 0000-0003-1495-6479.

1. Tedarik Zinciri Tasarımı

Tedarik zinciri tasarımı, tedarik zincirinin nasıl yapılandırılacağının belirlenmesini içerir. Tasarım kararı, iş ortaklarının seçimi, depo ve üretim tesislerinin yerlerinin ve kapasitelerinin belirlenmesi, ürünlerin, taşıma şekillerinin ve bunları destekleyen bilgi sistemlerinin belirlenmesi kararlarını içerir. Dolayısıyla, bir tasarım kararının oluşması, çok disiplinli bir katılım, yüksek tecrübe, uzman bilgisi, teknolojik altyapı, yeterli kaynak ve zamana ihtiyaç duyar. Tedarik zinciri tasarımı, çok fonksiyonlu bir süreç olması nedeniyle, finans, pazarlama, üretim ve tedarik zinciri takım üyelerinin tasarım sürecinde aktif rol almasını gerektirir. Ürün programına dahil olan her bir grubun sürece dahil olması, maliyet, temin süresi ve elde bulunabilirlik gibi önemli konularda faydalı bilgi sağlaması nedeniyle tedarik zinciri tasarımının başarısıyla birebir ilişkilendirilebilir. Tedarik zinciri tasarımı, tasarlanacak tedarik zincirinin niteliklerinin, iş yapma mekanizmasının ve kurallarının belirlenmesi süreçlerini kapsar. Bir tedarik zincirinin tasarlanması, bu tedarik zincirindeki tesislerin sayısı, yerleri ve kapasiteleri ile üretim, taşıma ve depolama miktarlarının belirlenmesini, taşıma ve depolama şekillerinin belirlenmesi ile bu aktivitelerin yürütülmesini destekleyen tüm ürün, hizmet ve bilgi akışı süreçlerinin yapılandırılmasını içerir (Calleja vd., 2018, s. 4468).

Literatürde yer alan tedarik zinciri tasarımı konulu çalışmaları, ürün tasarımını temel alan yaklaşımlar ve süreç tasarımını temel alan yaklaşımlar olmak üzere iki grupta incelemek mümkündür. Ürün tasarımını temel alan yaklaşımlar, tedarik zinciri tasarımının, ürün tasarımı ve üretim süreci tasarımı esnasında eşzamanlı olarak yapılması gerekliliğini öneren yaklaşımlardır. Bu çalışmalar, sırasıyla ürün tasarımı, süreç tasarımı ve tedarik zinciri tasarımı çalışmalarının ardı ardına yürütülmesinin, tedarik zinciri tasarımının başarısını olumsuz yönde etkilediği savunmaktadır. Ürün yaşam çevrimi göz önünde bulundurularak, ürün, süreç ve tedarik zinciri tasarımının birlikte eşzamanlı yapılması gerekliliği savunulmaktadır (Rungtusanatham, Forza, 2005).

Süreç tasarımını temel alan yaklaşımlar ise envanter optimizasyonu, ağ tasarımı, tesis tahsisi ve bunların sentezinden oluşan problemlere çözüm üretmeye çalışan yaklaşımlardır. Envanter optimizasyonu problemlerinde, envanterin tedarik zinciri içinde nasıl hareket edeceği ve envanter kontrol parametrelerinin nasıl belirleneceği gibi envanter politikaları incelenmektedir. Ağ tasarımı modellerinde, her bir tesisin nereye kurulacağı, kapasitelerinin ne olacağı, hangi pazara hizmet sunacağı ve hangi tedarikçiden kaynak temin edeceği konularının belirlenmesi ile birlikte, kurulacak tesislerin sayısı ve her tesisin tedarik zinciri içinde üstleneceği rol belirlenmektedir (Gunasekaran, Ngai, 2005; Karaman, Altıok, 2009).

DETONASYON MOTORLU KOJENERASYON ÇEVRİMLERİNİN EKSERJİ ANALİZİ

Arzu KEVEN[1]

1 Gölcük MYO, Kocaeli Üniversitesi, Kocaeli, Türkiye. arzu.keven@kocaeli.edu.tr - ORCID: 0000-0003-0040-9167

1 Giriş

Yanma Dünya üzerinde çok önemli bir kirlilik kaynağı olup yanma ile ilgili tüm dünyada araştırmalar yapılmaktadır [1, 2]. Dizel, Otto, Brayton çevrimleri gibi geleneksel gaz çevrimlerinde basınçta çok az düşüşle ses altı hızlarda elde edilen alevlenme modunun kullanıldığı deflagrasyon adı verilen ses altı yanma süreci ile güç ve enerji elde edilir. Alevlenmeye dayalı gaz türbinleri, ekserji verim limitlerine ulaşmakta, performans verimlerini arttırmak çok zor hale gelmektedir. Uçak motorları özellikle gaz türbinleri ve detonasyon yanmalı motorlar, son yıllarda araştırmacılar tarafından çok önemli ilgi görmektedir. Bununla birlikte, elektrik ve ısı enerjisi üretmek yani kojenerasyon için detonasyon motorlarının kullanılması verimli bir şekilde araştırılmamıştır. Gelecek vaat eden ancak henüz ticarileşmemiş yeni teknolojilerden biri olan PGC (Basınç Kazançlı Yanma), gaz türbinli sistemlerden daha yüksek verimleri nedeniyle dikkat çekmektedir. Detonasyonlu yanma, basınç kazanımlı yanmayı elde etmek ve gerçekleştirmek için birincil yöntemlerden biridir. Detonasyonlu yanma, geleneksel gaz türbinlerine göre %30 daha yüksek termal verim sağlar, yapıları daha basittir. Detonasyonlu yanma, alevlerden binlerce kat daha hızlı yanmaya neden olan süpersonik yanma moduna dayanmaktadır [3, 4]. PDE çevrimlerinin modellenmesi biri sürtünme etkilerini içeren Fanno Akışı, diğeri ısı eklemeyi içeren Rayleigh Akışı şeklinde yapılabilir. Bu iki akış sabit alanlıdır.

Detonasyonlu yanma işlemi, sabit basınçlı yanmaya göre sabit hacimli yanma gibidir, çünkü basınç dengesi için yeterli zaman yoktur. Yani izobarik bir süreçten ziyade izokorik bir sürece yakındır. Sabit hacimli bir yakma işleminin avantajı, çalışma sıvısında sabit basınçlı bir yakma işlemine göre daha düşük bir entropi artışı üretebilmesidir. Kontrollü bir şekilde detonasyonu başlatma ve sürdürme zorluğu yüzünden, detonasyon son elli yıla kadar sadece tahrik uygulamaları için araştırılmış, ancak PDE (pulse detonation engine) ve RDE (rotating detonation engine) konseptleri ile güç üretiminin de mümkün olduğu ve sürekli çalışabileceği deneysel olarak gösterilmiştir.

PDE çevrimlerinde hava yakıt karışımlarının doldurulması, yanma, blöf ve tasfiye olmak üzere dört aşama vardır [5, 6]. Detonasyonda, enerji salınımları tarafından yönlendirilen bir şok cephesi vardır. Termodinamiğe uygun detonasyon dalgası modeli için en iyi model Chapman-Jouguet (CJ) modelidir. Detonasyon motorları, Zeldovich-von Neumann-Döring (ZND) çevrimi ile çok iyi açıklanmaktadır. ZND çevriminde oksidan-yakıt karışımı enjektörlerden gelir ve yanma odasına püskürtülür. Bundan hemen sonra, bir kıvılcım ateşleyici yanmayı başlatır ve alev, parlama yanması olarak ses altı olarak ilerler. Ses altı alev bir dizi gaz dinamiği işlemiyle hızlandırılır. Yanma odasındaki engellerle türbülans seviyesi artar. Türbülans seviyesinin artması yanmanın detonasyona geçişine (DDT) adı verilen detonasyona dönüşmesine neden olur [5, 6]. Yanma

EBUSSUÛD EFENDİ'NİN BAZI KUR'AN AYETLERİNİ TARİH PERSPEKTİFİNDEN YORUMLAMASI

Kadir ERBİL[1]

1 Dr. Öğretim Üyesi Kadir ERBİL ORCİD: 0000-0003-2530-4396

Giriş

Ebussuûd Efendi, tefsiri *İrşâdü'l-aklı's-selim ilâ mezâyâ'l-Kur'âni'l-Kerim*'in mukaddimesinde asıl adının Muhammed olduğundan bahsetmektedir. "Ebussuûd Efendi" ifadesi ise onun künyesi veya lakabıdır. Ona bu lakabın neden verildiği hakkında kaynaklarda yeterli bilgiler bulunmamaktadır. Babası Şeyh Muhyiddin Muhammed Yavsi, henüz Amasya'da şehzade olan Bayezid'in dostluğunu ve sevgisini kazanmış, bu nedenle şehzade Şeyh Muhyiddin Muhammed Yavsi'yi İstanbul'a davet etmişti. İlk eğitim ve öğretimini babasının yanında yapmış, ondan kelam, belagat ve tefsirle ilgili çeşitli kitaplar okumuştur. Yavuz Sultan Selim döneminde çeşitli medreselerde görev yapmıştır. Bir süre sonra baş müderrisliğe atanmış, Kanunî Sultan Süleyman döneminde Rumeli kazaskerliğine yükselmiştir. Bu görevi sekiz yıl yürüten Ebussuûd Efendi, Fenârîzâde Muhyiddin Efendi'nin yerine şeyhülislam olmuştur. Otuz yıla yakın bir süre bu görevde bulunmuştur. Ebussuûd Efendi, görevi sırasında birçok yeniliklere imza atmış, Tefsir, fıkıh, kelam, akaid ve tasavvuf alanlarında eserler vermiş, özellikle fıkhi konularda verdiği fetvaları ve Arapça kaleme aldığı *İrşâdü'l-aklı's-selim ilâ mezâyâ'l-Kur'âni'l-Kerim* adlı tefsiri ön plana çıkmıştır. O, Osmanlı döneminde yetişen tefsir âlimlerinin çoğunun Kur'an'ın tamamını tefsir etmek yerine, yazılan tefsirlere haşiye ve talik yazan müfessirler gibi olmayıp, Kur'an'ın tamamını Arapça tefsir etmiştir. Bu nedenle ona, "Sultânü'l-müfessirîn, Hatîbü'l-müfessirîn, Hâtimetü'l-müfessirîn" gibi unvanlar verilmiştir. Ona verilen bu unvanlar, onun tefsir ilmindeki yerini belirlemiştir. Ebussuûd Efendi, Arapça olarak kaleme aldığı tefsirini yazarken, Fahreddin er-Râzî'nin (ö. 606/1210) *Mefâtîhu'l-gayb* ve Nesefî'nin (ö. 710/1310) *Medârikü't-tenzîl* adlı tefsirlerinden haylice yararlanmıştır. Araştırmada Ebussuûd Efendi'nin tarihe bakışı ve tarih hakkındaki görüşleri incelenmiştir. Onun tarihle ilgili görüşlerini, ayetlere getirdiği yorumlar çerçevesinde değerlendirmek gerekir. Ebussuûd Efendi'nin tarihle ilgili görüş ve yorumları henüz araştırma konusu yapılmadığı için ayetlere getirdiği yorumları ve tespitleri incelenerek bir kanıya varmak mümkün olur.

1. Ebussuûd Efendi Hayatı

Ebussuûd Efendi, Osmanlı Devleti'nin ileri gelen ilim insanlarından biridir. Fıkıh ve tefsir alanındaki yetkinliği nedeniyle dönemindeki ilim adamlarının sevgi ve saygısını, döneminin İslam âleminin de takdirini kazanmıştır. Yeteneklerinden dolayı Osmanlı döneminde önemli görevler icra etmiştir. İsmi Muhammed b. Muhammed Mustafa el-İskilibî el-Imâdî olup, "Şeyhülislam, Müfti'l-Enam, Sultanü'l-müfessirîn, Muallim-i sâni, Allâme-i küll, Hoca Çelebi, Ebu Hanife-i sânî" gibi çeşitli unvanlarla anılmıştır. Ebussuûd Efendi rivayetlere göre 896/1490 tarihinde İskilip'te

Giriş

İbn Meymun, Yahudi bir düşünürdür. Yahudi olarak doğmuş ve Yahudilik dininin bazı esaslarına inanmamakla birlikte inançlarından kopamamıştır. Endülüs Devleti'nin döneminde yaşamış ve İslam Filozoflarıyla tanışma fırsatı bularak onların düşüncelerinden etkilenmiştir. Fakat İslam filozoflarının bazı düşüncelerini aynen alarak Yahudilik dinine uygulamıştır. Bunun en büyük örneklerinden biri de nübüvvet anlayışıdır. Farabi, İbn Sina gibi İslam filozoflarının nübüvvet nazariyelerini olduğu gibi alıp Hz. Musa üzerinde uygulamış ve Hz. Musa'yı, biricik ve diğer peygamberlerden üstün bir konuma taşımıştır. İbn Meymun'un Spinoza'ya nazaran Yahudilere göre en büyük üstünlüğü bu olmuştur. Spinoza Yahudilik esaslarını sert bir dil ile eleştirirken İbn Meymun yuvarlak bir dil kullanarak Yahudi Tarihinde saygın bir filozof olma niteliği kazanmıştır.

Farabi ve İbn Sina'nın nübüvvet nazariyelerine baktığımızda, ay üstü ve ay altı alem olarak iki farklı alemden söz edilir. Tanrı ay üstü alemin en üst kısmında hareketsiz bir şekilde durmakta ve sürekli olarak kendisini düşünmektedir. Düşünen Tanrı'dan bir süre sonra zorunlu olarak akıllar taşar. Öncelikle ilk akıl, ikinci akıl… diye devam ederek ay üstü alemin en aşağısında kalan faal akılla son bulur. Faal akıl, ay altı alemi düzenleyen akıldır. Ay altı aleme baktığımızda; madde, hayvan, insan, kamil insan şeklinde aşamalardan oluşmaktadır. En üstte akli, ahlaki yetkinliğe ulaşmış, kendisinde muhayyile melekesinin zirvesini barındıran kişiler vardır ve bunlar da filozoflar ile peygamberlerdir. Ancak filozoflar muhayyile melekesi güçlü olmayan kişilerdir. Dolayısıyla peygamberden farklıdırlar. Peygamberler faal akıldan direkt olarak alır ve muhayyile melekesi sayesinde halkının diline çevirerek onlara vahyi tebliğ eder. Bu vahyi sembolleştirme durumu peygamberin ve içinde bulunduğu çevrenin durumuna göre değişiklik arz eder.

İbn Meymun ve Spinoza; Farabi ve İbn Sina gibi İslam filozoflarının yukarıda anlatılan nübüvvet nazariyelerinden oldukça etkilenmiş ve kendi düşüncelerini bu noktada geliştirmiş bazen de aynen almışlardır. Fakat her insanda olduğu gibi onların da düşüncelerinde bazı farklılıklar olmuştur. Bu çalışmayla bu farklılıkları göreceğiz.

1. Spinoza'nın Nübüvvet Nazariyesi

Spinoza, 24 Kasım 1632 yılında Amsterdam'da Yahudi bir ailenin çocuğu olarak dünyaya gelir. Babası öldükten sonra maddi sıkıntılar içine giren Spinoza, Musevilikte geçerli olan uygulamalar yerine Amsterdam'ın hukuk kurallarını benimseyince cemaatin güçlü liderleri tarafından büyük tepki görür (Vural, 2012:71). Spinoza, 20'li yaşlarındayken dinin Yahudi cemaati üzerinde bir baskı aracı olarak kullanılmasından ve sürekli dini

MEZHEPLERİN GÖRÜŞLERİ BAĞLAMINDA İTİKÂF FIKHI

Şükrü ŞİRİN[1]

1 Dr. Öğr. Üyesi, Sakarya Üniversitesi, İlahiyat Fakültesi, Temel İslam Bilimleri Bölümü, ssirin@sakarya.edu.tr, https://orcid.org/0000-0001-8881-9261

Giriş

İslâm dini Müslüman bireyin Rabbi ile olan ilişkisini düzenlerken kendi iç dünyasında olgunlaşması, başkalarını düşünmesi ve manevî açıdan gelişmesi için mükelleflere yönelik bazı ibadetleri zorunlu kılarken bir kısmını ise gönüllülük esasına bağlamıştır. Bu bağlamda olmak üzere farz ya da vâcip seviyesinde olmasa da bireye katkı sağlayacak nafile ibadetler önerilmiş ve uygulama şekilleri Rasûlullah (s.a.v.) tarafından gösterilmiştir. İtikâf kavramı İslâm hukukunda özel bir ibadetin adı olup bazı şartlar dâhilinde kişinin belirli bir mekânda geçirdiği süre olarak tanımlanır. Yorucu ve uzun hayat yolculuğunda dünyevî koşuşturmalara ve sıradan davranışlara verilen bir ara, kulun kendini muhasebe etmesine yönelik bir fırsat mahiyetindeki itikâf, bireye kazandırdığı özellikler yönüyle birçok hikmeti barındırsa da ibadet olması nedeniyle bir kurala bağlanması gerekmektedir. Zira İslâm hukuku, bir fiilin hikmetlerinden ziyade şekil şartlarının belirlenmesine yönelik tespitlerde bulunan bir yapı sergilemektedir. İşte bu nedenle her ibadet türünde olduğu gibi itikâfla ilgili olarak da bazı kurallar konulmuş, bu kurallardan bir kısmı âlimler arasında ittifakla kabul edilirken bazıları ihtilafa konu olmuştur. Bu noktadan hareketle başta itikâfın ne olduğu, hangi durumlarda nasıl bir hüküm aldığı, şartları ve itikâfı bozan davranışların neler olduğu bilinmesi gereken hususlar arasında sayılabilir. Mezheplerin itikâf için gerekli gördükleri şartlar ve bu şartlara dair tartışmaların bir değerlendirmesi mahiyetindeki çalışmada günümüz toplum yapısı ve mescit mimarisi açısından da bir takım tespitlere yer verilecektir.

1. İtikâfın Tarifi ve Meşruiyeti

İtikâf, Arapça kökenli bir kelime olup a.k.f. kökünden türetilmiştir. Sözlükte "alıkoymak, hapsetmek, kişinin kendini bir şeye bağlaması ve ondan ayrılmaması, bir yere yerleşmek" gibi anlamlara gelen kök manasına uygun bir şekilde kendini ibadete adama eylemine itikâf denilmiş, itikâfa giren kişiye mu'tekif veya âkif ismi verilmiştir.[1] Fıkıh terimi olarak ise 'bir mescitte veya mescit hükmünde olan bir yerde itikâf niyetiyle ikâmet etmek' olarak tanımlanmıştır.[2] Klasik dönem fıkıh eserlerinde itikâfın tanımı yapılırken kimi zaman niyet, mescit ve belirli şartların zikredilmesi ile yetinilmiş, bazen de bu tanıma itikâfın süresi dâhil edilmiştir. Kâsânî (ö. 587/1191) itikâfı tarif ederken kişinin Allah'a yakınlaşmak niyetiyle gayretini Allah'ın rahmet ve mağfiretine kavuşmaya yönlendirip dünyadan yüz çevirmesi ve bunu mescitte yapması gibi özellikleri öncelemiş, başka tariflerde de benzer yaklaşımlar sergilenmiştir.[3] Cürcânî (ö. 816/1413) ise

BÖLÜM 4

EMEVİLER DÖNEMİ DENİZ SEFERLERİ

Necati Aykon[1]

1 Dr. Öğretim Üyesi, Burdur Mehmet Akif Ersoy Üniversitesi, İlahiyat Fakültesi, İslam Tarihi ve Sanatları Bölümü, Siyeri Nebi ve İslam Tarihi Anabilim Dalı, naykon@mehmetakif.edu.tr, orcid.org/ 0000-0003-3853-0552

GİRİŞ

Yeryüzünde denizciliğin ne zaman başlamış olduğu bilinmemektedir. Gemi yaptığı kutsal metinlerde ve mitolojik bilgilerde yer alan Hz. Nuh (a.s) zamanından önce denizciliğin mahiyeti bizce karanlıktır.

M.Ö. 1000 yıllarında Doğu Akdeniz'de Fenikeliler hayatlarını denizcilikle kazanmışlar, gemilerle bütün Akdeniz'i ve Afrika sahillerini hâkimiyetleri altında tutmuşlardır. Milattan sonraki yüzyıllarda Bizans imparatorluğu Akdeniz'de kendini kabul ettirmiş uzun yıllar hâkimiyetini sürdürmüştür. Yine Kartacalılar'ın, Asurlular'ın (M.Ö.669-626) kendi dönemlerinde Akdeniz'de hüküm sürdüklerini görüyoruz. Milattan sonraki yüzyıllarda Bizans İmparatorluğu Akdeniz'de kendini kabul ettirmiş, uzun yıllar hâkimiyetini sürdürmüş; bu saltanat, İslam denizciliğinin kurulup güçlenmesi ile sona ermiştir. (Mehmet Şükrü, l306, s. 4 vd.)

Araplar, bedevi bir tarzda hayat sürdürdükleri, deniz yolculuğu yapmadıkları ve denizin durumu hakkında bilgi sahibi olmadıkları için İslam'ın ilk dönemlerinde deniz savaşlarına önem vermemişlerdir. Araplar, çok eskiden beri ticaretle uğraşırlardı, denizle olan alakaları sadece ticari maksatlı idi. Cidde, Umman ve Yemen limanları onların ticaret merkezinin istasyonları durumunda idi. Ticaret dışında denizcilikte söz sahibi değillerdi.

Araplar denizciliğe askeri manada İslamiyet'ten sonra Hz. Osman'ın halifeliği zamanında başladılar. Bizans'ı taklit mahiyetinde başlayan Arap-İslam denizciliği, Emeviler döneminde zirveye ulaşmış, kısa zamanda güçlü rakibi Bizans donanmasını Akdeniz'de tesirsiz hale getirmiştir. Bu konuda ayrıntılı bilgiyi konumuzun ilerleyen bölümlerinde aktaracağız. Şimdi İslam'ın ilk dönemlerinde Müslümanların denizcilikle ilgili olarak sahip oldukları bilgileri bize sunan Ayet ve Hadislere göz atmaya çalışalım.

1. ASRI SAADET'TEN EMEVİLERE KADAR DENİZCİLİK

1.1. Kur'an-ı Kerim ve Hadislerde Denizcilik

Kur'an-ı Kerimde deniz ve denizcilik ile ilgili pek çok âyet bulunmaktadır. İncelediğimiz zaman bu ayetlerin muhteva bakımından üçe ayrıldığını görüyoruz.

Deniz ve gemilerin Allah'ın varlığına delil olduğuna dair âyetler: Bu konuda şu ayetleri örnek olarak verebiliriz: *"...İnsanların faydasına olan şeyleri denizde taşıyarak yüzüp giden gemilerde elbette düşünen bir topluluk için pek çok deliller vardır."(*K. K. Bakara,2/164)

"Gemilerin denizde Allah'ın lütfuyla yüzdüğünü görmedin mi? Bu size varlığının delillerini göstermek içindir..." (K.K. Lokman,31/31)

ZİYA GÖKALP'İN İÇTİMAİ USUL-İ FIKIH TASAVVURU

Murat KOBYA[1]

1 Dr. Öğr. Üyesi, Bolu Abant İzzet Baysal Üniversitesi İlahiyat Fakültesi, Felsefe ve Din Bilimleri Bölümü, ORCID: 0000-0002-3221-1430

muratkobya@ibu.edu.tr

Giriş

İkinci meşrutiyet ve Cumhuriyetin kuruluş döneminin önemli fikir adamı, Türkçülük ideolojisinin önde gelen ismi, Türkiye'de ilk defa üniversitede sosyolojisi kürsüsünü kuran, Durkheim sosyolojisinin takipçisi Ziya Gökalp (1876-1924)'in görüşleri her iki devrin iktidar sahipleri tarafından da dikkate alınmıştır. Toplumsal yapıda ve devlet rejiminde köklü değişikliklere gidilmesi taraftarı olan Gökalp, özellikle ikinci meşrutiyet döneminde, arzu ettiği değişikliklere zemin hazırlamak gayesiyle toplumda temel meşruiyet kaynağı olan İslam dininden de yararlanmasını bilmiştir. Bu çerçevede onun içtimai usul-i fıkıh tezi, Batılılaşma ve laikliği İslami referanslara dayanarak meşrulaştırma girişiminin tipik bir örneği olarak kabul edilebilir.

Bireysel ya da toplumsal meseleler hakkında dini kaynaklardan çıkarılan hükümlere "fıkıh" adı verilir. Usul-i fıkıh (İslam hukuk metodolojisi) ise, söz konusu hükümlerin ayrıntılı kaynaklarından çıkarılabilmesine yarayan kurallar bütününe verilen isimdir (Zekiyyüddin Şa'ban, 1990: 23-24). Fıkıh ilmi, tarih boyunca Müslüman toplumların sorunlarına çözüm üretilen bir mecra olmuştur. Ancak son birkaç asırdır toplumsal hayatta meydana gelen köklü değişim ve dönüşümler ve Batılılaşma hareketinin ivme kazanmasıyla birlikte toplumsal sorunlara dini kaynaklar yerine akıl ve bilim yoluyla çözüm üretilmesi gerektiği fikrinin aydınlar nezdinde yaygınlaşması, İslam fıkhının ve onun bireysel ve toplumsal hayatın tüm alanlarını kapsayan hükümlerinin tartışılmasına sebep olmuştur. Modern düşüncenin dini bireysel alanla sınırlama ve vicdanlara kapatma düşüncesi, klasik İslam fıkhının bireysel ya da toplumsal olsun, tüm insan davranışlarının bütüncül bir İslami dünya görüşüne göre şekillenmesi gerektiği düşüncesiyle tam bir zıtlık teşkil ediyordu. Bu durumda ya modernleşmeden ya da İslami dünya görüşünden vazgeçmek gerekiyordu. Yeni oluşan bu Batıcı aydın kitlesi içinde İslam dini ile göbek bağını kesenler olduğu gibi, Gökalp örneğinde olduğu gibi atalarından miras aldığı değerlerden kolayca kopamayan ve dinin temel referans kaynağı olduğu bir toplumsal gerçekliği karşısına almak istemeyenler de vardı. İkinci gurubun stratejisi toplumun temel değerleriyle doğrudan çatışmadan, söz konusu değerleri kendi modernleşme amaçlarına uygun olarak yeniden dizayn etmek üzerine kuruluydu.

Biz, bu çalışmamızda Ziya Gökalp'in içtimai usul-i fıkıh teorisini nasıl temellendirdiğini ilgili makalelerinden aktardıktan sonra, konu ile ilgili tartışma ve eleştirileri ortaya koyacağız. Böylece Gökalp'in düşüncelerinin doğru bir şekilde anlaşılmasına katkı sağlayacağımızı ümit ettiğimiz gibi aynı zamanda, Batılılaşma hareketinin din-toplum ilişkilerinde değişim ve dönüşüm yönünde yarattığı baskının sonuçlarına, Ziya Gökalp'in tezlerinden hareketle göz atmak istiyoruz.

BÖLÜM 6

EBÛ ÖMER EL-CERMÎ VE SÎBEVEYHİ'YE MUHALİF GÖRÜŞLERİ

Abdulkadir KİŞMİR[1]

1 Dr. Öğr. Üyesi Abdulkadir KİŞMİR, Recep Tayyip Erdoğan Üniversitesi İlahiyat Fakültesi, Arap Dili ve Belagatı, abdulkadir.kismir@erdogan.edu.tr. ORCID ID: 0000-0001-5297-0138.

GİRİŞ

İslâmiyet'in ortaya çıkışıyla beraber gerek Araplar gerekse bu dini benimsemiş diğer Müslüman topluluklar Arapçaya ilgi duymaya başlamışlardır. Bu ilgi, özellikle Basra ve daha sonra Kûfe'de bu dilin kural ve kaideleri tespit için kaleme alınan eserlerin telifine vesile olmuştur. Dile ait meseleler meclislerde tartışılmış, farklı görüş ve kanaatler ortaya çıkmıştır. Dilsel tartışmalar sadece dil ekolleri arasında yaşanmamış, aynı zamanda dil mekteplerinin kendi içerisinde de görüş ayrılıkları olmuştur. Basra ekolü temsilcileri arasında farklı görüşlerin günümüze ulaşmasında imâmu'n-nuhât olarak şöhret bulmuş, tartışmasız bu ekolün en önemli siması Sîbeveyhi'nin (öl. 180/796) rolü büyüktür. Onun günümüze ulaşan *el-Kitâb* adlı eseri bu alanda en değerli kaynaklardan biri kabul edilmiştir. Her ne kadar Sîbeveyhi ve eseri kıymeti haiz ise de onda olan bütün görüşler mutlak hakikat olarak görülmemiştir. Vefatından sonra bile onun görüşleri nahivcilerin incelemesine tabi tutulmuş bazıları kabul görmemiştir. Bu çalışma Sîbeveyhi'nin görüşlerine muttali olduktan sonra birçok konuda farklı görüş beyan eden Ebû Ömer el-Cermî'yi (öl. 225/840) ele almaktadır.

1. Ebû Ömer el-Cermî ve İlmi Kişiliği

Sîbeveyhi'ye kadar gelen ve *el-Kitâb*'ta toplanan Arap dil kurallarının dil bilginlerine ulaşmasında etkin bir rol oynayan Ebû Ömer Sâlih b. İshâk el-Cermî'nin doğum tarihi bilinmemektedir. (Şübeyr, 2005: 19) Bazı kaynaklarda Becîle b. Enmâr'ın emri altında bir süre yaşamasından dolayı Becelî diye anılmıştır. (Enbârî, 1985: 114; Zübeydî, 1984: 74) Ebû Ömer künyesiyle de (Ebû Hâtim er-Râzî, 1953: 4/394; Sîrâfî, 1955: 55) tanınmakla beraber Yemenli Cerm b. Zebbân'ın yanında ikameti sebebiyle bağlı bulunduğu kabileye nisbetle Cermî ismiyle meşhurdur. (Sîrâfî, 1955: 56) Özellikle nahiv tartışmalarında yüksek sesli oluşundan الكلب النبَّاح veya النباج, çok sık tartışmalarda bulunduğu için مُهارِش lakaplarıyla anılmıştır. (Enbârî, 1985: 117; Yâkût el-Hamevî, 1993: 4/1143) Nahiv münazaralarındaki ses tonu yüksekliğine bağlı olarak gözlerindeki kızarıklık sebebiyle arkadaşı Ebû Zeyd el-Ensârî (öl. 215/830) tarafından kendisine الكلب lakabı da takılmıştır. (İbnu'l-Kıftî, 1982: 2/34)

Cermî farklı kültürlerin ürünü ilimlerin ve İslâm coğrafyasında yaşayan bilim adamları tarafından telif edilen eserlerin İslam kültürüne şekil verdiği bir dönemde yaşamıştır. (Hasen, 1996: 262 vd.) Hatta bu dönem dil ilimleri açısından en verimli zaman dilimi kabul edilmiştir. (Mübârek, 1979: 7; ʿUmeyrî, 1979: 3)

DAVETTEN DEVLETE GÖÇ OLGUSU: HİCRET[1]

Necati AYKON[2]

1 Bu çalışma, 26-27 Mayıs 2022 tarihinde Burdur/Türkiye'de yapılan V. Uluslararası Stratejik ve Sosyal Araştırmalar Sempozyumunda sunulan *Tarihin Akışını Değiştiren Göç Olgusu: Hicret Ve Ensar Muhacir Kardeşliği: Muâhât adlı özet* bildiriden üretilmiştir.

2 Dr. Öğretim Üyesi, Burdur Mehmet Akif Ersoy Üniversitesi, İlahiyat Fakültesi, İslam Tarihi ve Sanatları Bölümü, Siyeri Nebi ve İslam Tarihi Anabilim Dalı, naykon@mehmetakif.edu.tr, orcid.org/ 0000-0003-3853-0552

Giriş

Aslolan insanın doğup büyüdüğü, yetiştiği, özdeşleştiği, bağ kurduğu yerde yaşamasıdır. Ancak bazı etmenler vardır ki bulunduğu yerdeki şartlar onu oradan ayrılmaya zorlar. Göç olgusu dediğimiz bu olay, kişilerin yerleşmek amacıyla bir yerden başka bir yere gitmeleri hareketinin genel adıdır. Bu hareket ülke içinde, ülke dışında, yöreler arasında, coğrafyalar arasında, kıtalar arasında olabilir. Bu olay sadece mekan değiştirmekle sınırlı kalmayıp çok boyutlu bir değişimi de beraberinde getirmektedir. (Eravcı-Ateş, 2018: s. 43)

Canlı varlıklarla ilgili olaylardan biri de göç olgusudur. Canlıların en seçkini olan ve başka varlıkları kullanıp onları yönetmekle sorumlu olan insanoğlu bu olguyu yeryüzüne gönderilerek yaşamıştır. Yani insanoğlu bir bakıma zorunlu göçe maruz kalan bir varlıktır. Çünkü işledikleri bir suç sebebiyle cennetten çıkarılıp yeryüzüne indirilmekle cezalandırılmışlardır. (Hizmetli, 2001, s. 246-247)

Bireyler ve topluluklar çeşitli nedenlerden dolayı bulundukları mekânı terk ederek başka bir mekana göç etmek zorunda kalır. Birey ve topluluk açısından göç, mekânsal bir değişikliğe karşı gelme yanında, bireyin ve toplumun anlam ve değer dünyasının da değişim ve dönüşüm yaşamasına da neden olmaktadır. (Ekici-Tuncel, 2018, s. 9-10)

Tarihte pek çok göç olayı görülmüştür. Her birinin kendine göre bir sebebi vardır. Doğal, siyasal, ekonomik, dinsel ve mezhepsel, sosyal ve kültürel vb. pek çok nedenler sayılabilir. Bu nedenler çok boyutlu ve kapsamlı nedenlerdir. (Eravcı-Ateş, 2018: 43)

Anadolu coğrafyasını göz önüne alacak olursak ekonomik, eğitim, daha iyi bir hayat sürmek, kaynaklardan daha fazla yararlanmak gibi nedenlerle genellikle kırsal kesimden şehirlere göçler ön plana çıkar.

Tarihi etkileyen göçler arasında kavimlerin Asya'dan Avrupa'ya göç etmesi, Selçukluların Anadolu'ya göç etmesi, yeni dünyanın keşfedilmesiyle insanların Amerika, Avustralya ve Zeni Zelanda gibi kıtalara ve bölgelere yapılan göçler sayılabilir.

Tarihin her döneminde insanoğlu isteyerek ya da istemeyerek göç olgusuyla karşı karşıya kalmıştır. Bulunduğumuz zaman diliminde de daha çok zorunlu göç hadiselerine şahit olmaktayız. Bu göçler, özellikle savaşlar nedeniyle genellikle Asya ve Afrika ülkelerinden Avrupa, Amerika ve Kanada gibi ülkelere yapılmaktadır. Bu ülkelerin yanı sıra huzursuzlukların olduğu ülkelerin komşuları yanı sıra ülkemizde göç dalgasından etkilenmektedir. Resmi, gayri resmi olarak milyonlarca insan ülkemizde mülteci durumundadır.

BÖLÜM 8

ORYANTALİSTLERİN YAKLAŞIMLARI ÖZELİNDE YEDİ HARF MESELESİ

Abdurrahman BARUT[1]

Ahmet KÜÇÜK[2]

1 Doktora Öğrencisi, İnönü Üniversitesi, Sosyal Bilimler Enstitüsü, Temel İslam Bilimleri, abdurrahmanbarut@gmail.com, ORCID: 0000-0003-2351-5878

2 Dr. Öğr. Üyesi, İnönü Üniversitesi, İlahiyat Fakültesi, Temel İslâm Bilimleri, ahmet.kucuk@inonu.edu.tr ORCID: 0000-0002-7544-7099

Giriş

İslamî ilimler arasında yer alan Kıraat ilmi, Kur'ân'ın indirilmeye başlandığı zamandan bu yana var ola gelmiş bir ilimdir. Bu ilmin var oluşana dayanak teşkil eden şey ise "Kur'ân yedi harf üzerine nâzil olmuştur"[1] şeklindeki hadis-i şerifidir.

Kıraatlerin kaynağı "Yedi Harf" meselesiyle doğrudan ilgili bir husus olduğundan, İbn Teymiyye (ö.728/1328)'nin nezdinde "büyük bir mesele"dir.[2] Bu büyük problemin hakikatini itiraf niteliğinde dile getiren İbnü'l-Cezerî (ö.833/1429) de otuz yılı aşkın süre zarfında bu meseleyi düşündüğünü dile getirmektedir.[3] Diğer yandan ez-Zürkânî (ö.1367/1948) bu meselenin eşsiz güzelliğinin yanında insanı gayrete sevk eden yönüne dikkat çekip bu konunun ilim erbabını endişelendiren, korkutan bir alan olduğunu da belirtmiştir.[4] İlim ehlinden bu itiraf niteliğindeki açıklamalardan anlaşılacağı üzere yedi harf meselesinin alimler tarafından çözülmesi gereken bir problem olarak görüldüğü ve en çok tartışılan konulardan biri olduğu aşikardır.

Oryantalistler 19.yüzyılın yarısından bu yana İslam alemi ve coğrafyasını bir çalışma alanı olarak görmeye başlamışlardır. Bu yönelim onları daha sistematik bir şekilde çalışmalarda bulunmaya sevk etmiştir. Bunun akabinde ise kendilerini İslam ve Kur'ân üzerine şüpheler uyandırmaya yoğunlaştırmışlardır. İslam coğrafyasında Kur'ân'ın yerinin ve öneminin farkına varan Batı Dünyası, Kur'ân'ı da kendi kitaplarının seviyesine indirgemeye çalışmış ve bu çabanın sonucunda birçok projeler üretmeye başlamıştır.[5]

Oryantalistlerin bu projelerle asıl maksadı Kur'ân'ın güvenirliliği ve korunmuşluğu gibi konularda tahrif ve tahrip edici bir etki oluşturmak, ayrıca O'nun ilahi kaynaklı olmadığı yönündeki fikirleri de temellendirmeye çalışmaktır. Hassaten bu konuyla ilgilenen oryantalistler yedi harf meselesi gibi suistimal edilebilecek bir konuyu da aynı gayelerle ele almaktan çekinmemiştir.

Özel olarak yedi harf meselesi, genel olarak "Kıraat İlmi", oryantalist düşünürlerin ilmî öncelikleri arasında yer almıyordu. 19. ve 20. yüzyıldan

5 Bu projelerden bir tanesi Münih Kırâat Arşivi Projesidir. Bu projeyle edisyon kritikli Mushaf çalışması gayreti içerisine girilmiştir. Oryantalistler var olan kıraat kaynaklarını kullanarak Mushaflarda tezatlık olduğunu iddia etmek için çabalamışlardır. Toplamış oldukları bu birikimi aynı zamanda iddialarını ispatlamak için birer delil olarak kullanmışlardır. Bkz.: Abdülhamit Birışık, *Kıraat İlmi ve Tarihi* (Bursa: Emin Yayınları, 2018), 175-179.

İBN HALDUN'UN TOPLUM VE TOPLUMSAL DAVRANIŞ TASAVVURU

Murat KOBYA[1]

1 Dr. Öğr. Üyesi, Bolu Abant İzzet Baysal Üniversitesi İlahiyat Fakültesi, Felsefe ve Din Bilimleri Bölümü, ORCID: 0000-0002-3221-1430

muratkobya@ibu.edu.tr

Giriş

Sosyolojinin temel konusu olan toplum, ortak bir kültürü ve ortak toplumsal kurumları paylaşan insan topluluğu olarak tanımlanabilir (Şavran, 2018: 7). Toplumsal davranış ise, pozitivist sosyoloji geleneğine uygun olan bir tarife göre; birbirinden haberdar ve birlikte mensubiyet duygusuna sahip asgari iki insanın eylemidir. Buna göre toplumsal davranış, çeşitli toplumsal statü ve rollere sahip sosyal kişileri içinde barındıran bir sosyal gurup dahilindeki davranıştır. Sosyal davranış; standartlaşmış, tipleşmiş, kalıplaşmış ve yapılaşmış davranıştır (Kobya, 2012: 16). Yorumlayıcı sosyoloji ekolünün öncülerinden Max Weber'e (1864-1920) göre ise sosyal davranış; diğerlerinin geçmiş, şimdi ve gelecekte meydana gelmesi umulan davranışlarına yönelik her türden insan eylemini ihtiva eder (Giddens, 2009: 244).

Evrende her şeyin bir sebep-netice halkasına bağlı olarak ortaya çıktığını, fiziksel, ahlaki, ruhsal vb. tüm olayların zorunlu nedenler tarafından tayin edildiğini iddia eden determinizm (belirlenimcilik) kuramı, hem felsefede hem de sosyal bilimler ve ilahiyatta insan davranışlarını anlama ve yorumlama bağlamında tartışma konusu olmuştur. İnsan davranışlarıyla bağlantılı olarak determinizm-iradecilik dikotomisini ele aldığımızda şu soruyla karşı karşıya kalıyoruz: İnsan, eylemlerini kendi özgür iradesiyle mi gerçekleştirir? Yoksa bizim eylemlerimiz dışımızdaki güçler tarafından zorunlu olarak mı belirlenmektedir? Sosyolojide eylem-yapı çelişkisi olarak ifade edilen tartışma budur. Toplumsal eylemlerimiz, sistem veya sosyal yapı olarak adlandırılan harici ve zorlayıcı bir kuvvet tarafından mı belirlenmektedir? Yoksa biz, toplumsal etkileşim sürecinde var olan manaya göre kendi irademizle eylemlerimizi şekillendiriyor, toplumsal dünyamızı kuruyor, yorumlama ve algı süreçleri içinde sürekli dönüştürüyor ve geliştiriyor muyuz?

Biz bu çalışmamızda öncelikle Batılı sosyolojide determinizm-iradecilik dikotomisi bağlamında karşılıklı olarak konumlanmış pozitivist/natüralist ve yorumlayıcı/hümanist sosyoloji ekollerinden kısaca bahsedip Max Weber'in konumuz açısından önem arz eden toplumsal davranış teorisi hakkında bilgi verdikten sonra büyük Müslüman düşünür İbn Haldun'un (1332-1406) toplum ve toplumsal davranış tasavvurunu ortaya koyup, onun determinizm-iradecilik kamplaşmasında nerede konumlandığını belirlemeye çalışacağız.

1. Sosyolojide Determinizm-İradecilik Dikotomisi

Sosyolojide, natüralist/pozitivist sosyoloji anlayışıyla yorumlayıcı/hümanist sosyoloji anlayışı arasında esaslı farklar mevcuttur. Birincisi, bireyin davranışını tayin eden sistem ve yapıları imleyen makro kuramlar geliştirirken; diğeri sistem ve yapıları kuran insanın failliğini vurgulayan

GİRİŞ

Gazap: Türkçemizde "öfke" dediğimiz, insanın psikolojik ve fizyolojik halini gösteren bu terimin Arapça lügatlarda, Kur'ân-ı Kerîm'de, tefsirlerde, Hadis, Kelâm ilimlerinde ve diğer İslâm kaynaklarında geçen karşılığı; "buğuz, gayz, sahat, gazap" terimleridir. Bunlardan sonuncusu hariç, diğerlerini daha önce yayınlanmış olan çalışmamızda[1] ele almıştık. Bu çalışmamızda ise "gazap"ı inceleyeceğiz. Gazap'ın Kur'ân-ı Kerîm'de ve buna bağlı olarak tefsirlerde farklı kullanımları olduğu görülmektedir. Ayetlerde bu terim Allah'a nispet edildiği gibi, Peygamberlere ve kullara/müminlere de nispet edilmiştir. Allah'ın gazabı kulların gazabından farklıdır. O'nun gazabı; âyetlerde belirtildiği şekliyle, kendisine inanmayan ya da emirlerine isyân eden kimseleri dünyada lânetlemesi, cezalandırması, sıkıntılara ve belâlara dûcâr etmesi, cizye (vergi) ödemek zorunda kalmaları, sürgüne gönderilmeleri, çölde yitip gitmeleri (yetîhûne fi'l-arz), maymuna, domuza ve Tâğût'un uşaklığına çevirmeleri, âhirette de Cehennem'e girmeleridir. Gazap'ın Allah'a nispet edilip edilemeyeceği, edilecekse bunun nasıl olacağı hususu Akâid/Kelâm İlmi'nde ve kelâmî tefsirlerde de tartışılmıştır.

Peygamberlerin gazabı: Burada iki Peygamberden bahsedilir. İlki; kendisine çok sıkıntılar yaşatan, vahiy almak üzere Tûr Dağı'na Rabbinin huzuruna gidince buzağıya tapan İsrailoğullarına Hz. Mûsânın (as) gazaplanması. İkincisi; Filistin ya da Ninova halkına peygamber olarak gönderilen Hz. Yûnus'un (as) onlara gazaplanarak terk-i diyâr etmesi ve sonra da balık tarafından yutulmasıdır. Kulların gazabı: Müslümanlar kendilerine yapılan şahsî ve dünyevî haksızlıklar karşısında gazaplanmış iseler, bunda ısrarcı olmayıp nefislerine hâkim olmaları ve hatâ edenleri bağışlamalarıdır. Eğer işlenen suçlar dünyevî ve şahsî değil de Allah'ın dinine ve kutsal/manevî değerlere, hukuka ve kanunlara karşı ise, bu konuda bağışlamak, affetmek aslâ mümkün değildir. Gerekli cezâî işlemler ivedilikle yapılmalıdır. Çünkü bu konuda affetmek; toplumda sû-i istimallere, şımarıklığa, eşkıyalığa, kul hakkının ihlâline, hakkâniyetin ve adâletin dışına çıkılmasına, kaosa sebep olmaktadır.

1 Dr. Öğr. Üyesi, Erzincan Binali Yıldırım Üniversitesi, İlahiyat Fakültesi, Temel İslam Bilimleri Bölümü Tefsir Anabilim Dalı, ORCID: 0000-0002-5124-1969, znaksakal@erzincan.edu.tr.

Kur'ân-ı Kerîm, dini inanç ve yaşamın yanında sosyal, siyasal, kültürel, ekonomik pek çok yönden problemli bir dönem ve coğrafyada inmeye başlamıştır. Yaklaşık yirmi üç yıl süren nüzul süreci tamamlandığında, geniş bir coğrafyayı etkileyecek, yazılı kültüre dayalı bir İslam medeniyetinin temellerini tesis etmiş, din birliği ve ahlakı esas alarak oluşturulan bir devletin ve toplumun ana kaynağı olmuştur. Tarihin bu şahitliği, Kur'ân'ın vahiy kaynaklı ve korunmuş olduğunun en önemli göstergesidir. Böyle olsa bile on dört asır önceye ait olan bu kutsal kitabın kaynağı, nakli, kıraatleri, konuları, manaları, yorumu, evrenselliği vb. hususlarda bazı meseleler dile getirilmektedir. Bu meselelerden bazılarına cevap vermeyi amaçlayan bu çalışmada; Kur'ân'ın vahiy kaynaklı oluşunun delilleri nelerdir, Kur'ân günümüze kadar emin şekilde nasıl ulaşmıştır, eğer hiç değişime uğramadıysa yedi harf ve kıraatler meselesi nedir, Kur'ân anlaşılması kolay bir kitap mıdır, öyleyse neden kapalı manaları vardır, Kur'ân'ı anlamada tefsir kaynaklarının yeri ve önemi nedir, neden ibadette Kur'ân kıraati Arapça olmalıdır, Kur'ân okumanın amacı nedir, Kur'ân neden son ilahi kitaptır, Kur'ân'ın gayesi ve ana konuları nelerdir, Kur'ân'da farklı inanç mensuplarıyla ilişkilerin temeli nedir, savaş ile ilgili ayetler nasıl yorumlanmalıdır, Kur'ân'daki maddi cezalar hangi esas ve şartlara göre düzenlenmiştir sorularına cevap aranmıştır.

1. Kur'ân'ın Kaynağı

Kur'ân, genel görüşe göre Arapça'da "okumak" anlamına gelen "قرأ - ḳara'e" fiilinden bir isim olup "okunan" anlamına gelir. Terim olarak; Allah'tan (c.c.) nebi Muhammed'e (s.a.v.), Fâtiḥa'nın başından Nâs suresinin sonuna kadar vahiyle indirilen, mushaflarda yazılan, tevatürle nakledilen, okunmasıyla ibadet edilen, Arapça *mûciz* kelamın adıdır.[1] Gayesi itibariyle Kur'ân, ayetlerini düşünüp aklı olan öğüt alsın diye insanlığın hidayeti için gönderilen[2] son ilahi kitaptır.

Kur'ân'ın mûciz bir kelam oluşu, insanları benzerini getirmekten âciz bırakması anlamına gelir. Bu da insanüstü nitelikte, vahiy kaynaklı bir söz olması demektir. Kur'ân'ın mûciz olduğunu gösteren pek çok özelliği vardır. Bunlardan en önemlisi, din konularında en güzel manaları en güzel lafızlarla beyan etmesidir. Kusursuz nazım ve telifi yani harf, kelime ve ayetlerinin mükemmel seçilip sıralanışı, 23 yıl içinde aralıklarla inmesine rağmen bütünü içinde ayetlerinin, surelerinin birbiriyle uyumu bunu göstermektedir. Ayrıca Kur'ân'ın, indiği döneme nazaran geçmiş, hal ve geleceğe dair insanların bilemeyeceği doğru haberler vermiş olması;

1. The Importance of Species Identification in Meat

Determining the origin of the meat species in meat and meat products is extremely important in terms of health, economic, ethical, moral, religious and legal aspects. In order to reduce the production costs of meat and meat products, which is a subject we have encountered frequently in recent years, pork, donkey meat, etc. is added to beef. The negativities such as the addition of meat and the addition of cheap meat undermine the trust in foodstuffs. Due to the fact that pork and poultry meat is cheaper than beef, illegal production is made by mixing it into products made from red meat. It has been reported that food falsification in the meat industry has increased in recent years worldwide (Araç et al., 2022).

Consumption of fraudulent meat or meat products may cause the following problems for the consumer;

a. Different kinds of animal meats are offered for consumption without relying on religion and ethical considerations, and the consumer is deceived. For example; Muslim and Jewish consumers do not consume pork and pork products due to their religious beliefs.

b. Some people may be sensitive to meat and products of certain animal species and allergic reactions may occur.

c. Some animal meats (donkey, mule, dog, cat, crow, seagull, pigeon, etc.) that are not consumed by the society are offered for sale in the form of quality and meat-consumed animal meat, thus deceiving the consumer.

d. Since some animal meats (donkey, mule, dog, cat, crow, seagull, pigeon, etc.) that are not consumed by the society are slaughtered in an unauthorized and uncontrolled manner, various diseases spread.

2. Species Detection Methods in Meat and Meat Products

Species discrimination in meat and meat products is made by various methods. It is reported that methods based on sensory qualities, anatomical differences, histological features, characteristics of tissues and fats and glycogen amount, as well as immunological, electrophoretic and serological, genetic and spectrometric methods are used for species discrimination in meat and meat products (Özşensoy and Şahin, 2016).

2.1. According to Their Sensory Qualities

It is made on the basis of factors such as the specific color, smell, appearance, size and shape of the carcass in terms of sensory aspects. For example, when pork is evaluated sensorially, pork contains high intramuscular fat, has a urine-like odor and exhibits a soft consistency. The appear-

CHAPTER 2

THE USE OF BLACK SOLDIER FLY (*Hermetia illucens*) LARVAE IN POULTRY NUTRITION

Onur KESER[1]

1 Araş. Gör. Dr., Istanbul University-Cerrahpaşa, Faculty of Veterinary Medicine, Department of Animal Nutrition & Nutritional Diseases, Istanbul, TURKEY, ORCID ID: 0000-0001-8380-5549

Introduction

Protein is essential to have a sufficient level together with other nutrients in the ration to obtain the growth and yield performance expected from farm animals. In other words, while a nutrient-balanced diet is essential for growth, development and performance in animals, feed components in the diet should also have a high protein content, a balanced amino acid profile, high digestibility and palatability (Gałęcki et al., 2021). It is obvious that in the future, in parallel with the increasing world population, people's demand for animal products will increase and therefore there will be serious problems in the supply of feed and feedstuffs in the livestock sector trying to meet this demand. As a matter of fact, it is predicted by The Food and Agriculture Organization of United Nations that the world population will increase from 6.8 billion to approximately 9 billion until 2050, and the food requirement will increase by 70-100%, whereas agricultural production will only increase by 60% (FAO, 2011; FAO, 2014). It is also estimated that there will be 67%, 42%, 38% and 55% scarcity in corn, rice, wheat and soybean production in the future, respectively (Ray et al., 2013).

Feed cost constitutes 50-70% of the total cost in animal production (Spring, 2013), and the protein sources used constitute 25% of this cost (Albino et al., 1992). Among feedstuffs, protein supplements are the most expensive and limiting. Soybean meal (SBM) is considered to be a high-quality vegetable protein supplement used in animal rations, and 97% of soybeans produced worldwide are used as animal feed annually (Mottet et al. , 2017). Similarly, fishmeal (FM) is also used in animal nutrition as a high quality and digestible feed ingredient (Miles and Chapman, 2021). However, it has been reported that the production of fishmeal and oil has become increasingly limited due to overfishing to meet human food demand (Tacon and Metian, 2008), in the future, the use of protein obtained from human-edible soybean, other oilseeds and grains in animal feeding may be seen as a competitor to human food, however, feed supply may be affected by various factors such as the current status of arable land and water, climate change, energy cost, and government policies (Kim et al., 2019). Therefore, studies on alternative protein supplements in the field of animal nutrition have gained momentum in recent years and in this context, interest in insect larvae as a sustainable protein source has increased.

According to the European Food Safety Authority Scientific Committee, insect species that can be processed as animal feed include the black soldier fly (Hermetia illucens) in larvae, pre-pupae and pupae stages, house fly (Musca domestica) larvae for fish, chicken and pigs, mealworm (Tenebrio molitor) and lesser mealworm (Alphitobius diaperinus) as live larvae for pet animals, house cricket (Archeta domesticus), banded cricket (Gryllodes sigillatus) and field cricket (Gryllus assimilis) as live mature for

CHAPTER 3

CANCER IMMUNOTHERAPY STRATEGIES: TUNING THE IMMUNE SYSTEM AGAINST CANCER CELLS

Rümeysa DEMİR[1], Hüseyin Saygın PORTAKAL[2]

1 Izmir University Economics, Genetics and Bioengineering ORCID ID: 0000-0003-1132-2032
2 Research Assistant, Izmir University Economics, Genetics and Bioengineering ORCID ID: 0000-0002-3582-4152.

1. Introduction

The cancer causing the worldwide deaths for last decades is characterized by accumulation of mutations and the loosing of regular metabolic functions by the cancerous cells. To date many therapy approaches such as chemotherapy based on to design chemical therapeutic compounds that might target biomarkers of cancer (Anand et al., 2022), radiotherapy based on to kill the cancer cells by using high dosage of radiation (Baskar, Lee, Yeo, & Yeoh, 2012), gene therapy based on manipulation of gene editing tools such as CRISPR/Cas9 (Portakal, 2023), RNAi (Chalbatani, Grijalvo, Eritja, Logsdon, & Memari, 2019) etc. have been developed against various cancer types. However, many strategies of cancer cells such as creating tumor tissues through over growing and accumulation of cancerous cells, metastasis, enhancing the mutation burden limits the delivery of the therapeutic agents and their efficiencies (Chakraborty & Rahman, 2012). As such, to develop novel therapy approaches against cancer disease are the main topics of health sciences still.

While the immune system is body defense system in all species, it's one of the most complex body system due to its working principle is based on various interactions created through surface receptors or secreted special biomolecules by specific immune cells. Mammalian immune system is composed of two distinct immunities which are innate immunity providing first and second lines of defense and adaptive immunity providing third line of defense via its memory and specificity (Marshall, Warrington, Watson, & Kim, 2018). Apart from that immune system has developed powerful strategies in the combat with foreign infecting organisms, it has also quite effective and complicated mechanism in order to distinguish and destroy the genetically disordered cells such as cancer cells (J. Zhang, Han, Zhang, & Zhang, 2014). In this scope Cancer Immunity Cycle is promoted by immune system with following steps; i) the tumor neoantigen releasing by oncogenesis and recognition of them by dendritic cells (DCs), ii) processing and presenting the neoantigens to T cells via major histocompatibility complex I and II (MHCI and MCHII), iii) priming and activation of effector cytotoxic T lymphocytes (CTLs) in lymph nodes, iv) migration and infiltration of CTLs to tumor microenvironment (TME), v) degradation of cancer cells with secretion of interferon-γ (IFN- γ) and cell mediated response of CTLs (D. S. Chen & Mellman, 2013). Degradation of cancer cells causes to releasing of neoantigens to TME and cancer immunity cycle is repeated.

Although the existence of cancer immunity cycle, cancer cells have found many strategies in order to escape from immune response (Tang, Ning, Yang, Mo, & Tang, 2020). For instance the T regulatory cells (Tregs) concentration (Grover, Goel, & Greene, 2021), inflammatory conditions

1.Giriş

Bir işletmenin gelişiminde ve başarılı olmasında iş planının doğru tasarlanmasının etkisi oldukça büyüktür. (Zott ve Amit 2010) İş sürecinin tasarımı konusunda literatür incelendiğinde genellikle tasarımın iki farklı koşulda gerçekleştiği görülecektir. Bunların birincisi mevcut bir iş modelinin yeniden tasarımı iken diğeri ve bu kısımda ele alacağımız durum; yepyeni bir girişim için iş modelinin tasarlandığı durumdur. Yine literatür incelendiğinde yeni bir girişimin iş modeli oluşturulurken bunun hangi hızda ve detay seviyesinde gerçekleştirileceği tartışma konusudur. Bir görüş aşırı planlamanın dezavantajlarını vurgulayıp, sezgilere dayalı hareket etmeyi ön plana çıkarmakta ve iş planının, hızı kestiği ve motivasyonu azalttığını söylemektedir. Elbette bu, aşırı özgüvenle hareket etmek veya elde yeterli veri yokken iyimserliğe kapılmak vs gibi çeşitli risklere yol açacaktır Bu görüşün karşısında oldukça kalabalık bir grup ise detaylı ve yapısal iş planının start-up ın başarısı için oldukça gerekli olduğunu vurgular (Delmar ve Shane 2003). Bu girişimciye uzun vadede yapısal bir destek saplayacaktır ve ekonomik ilişkileri daha iyi ortaya koyup, karmaşıklığın azalması için zemin hazırlayacaktır. (Gavetti vd. 2005) Bu kısımda iş modelinin tasarım aşamasında hangi safhalardan geçileceği özetle ele alınacaktır. Bu bağlamda iş modeli kavramı, bir işletmede yürütülecek işlerin oldukça açık, sade ve bütünlüklü olarak ele alınmasına katkı sağlayacak ve girişimci için kullanışlı bir bakış açısı sağlayacaktır.

Öte yandan girişimci iş modelinde ortaya çıkabilecek zayıflıklar veya ortadan kaldırılması mümkün olmayan riskler oluştuğunda çıkış için de bir strateji hazırlamalıdır. (Wirtz 2020)

BÖLÜM 2

GAYRİMENKUL YATIRIM ORTAKLIKLARI ETKİNLİK ÖLÇÜMÜ

Alper OVA[1]

1 Dr. Öğr. Üyesi, İstanbul Aydın Üniversitesi, İktisadi ve İdari Bilimler Fakültesi, Muhasebe ve Finansman Yönetimi Bölümü, alperova@hotmail.com, ORCID ID: 0000-0002-1784-1506

1. Giriş

Geleneksel bir gayrimenkul yatırım ortaklığı (GYO) esasen gayrimenkulleri, ipotek ile ilgili varlıkları veya her ikisini birden elde tutmak için özel olarak oluşturulan kapalı uçlu fondur. Bu yatırım aracı, ABD Kongresi tarafından 1960 yılında, yatırımcılara gayrimenkullere yatırım yapmak konusunda bir fırsat sağlamak ve aynı zamanda yatırım ortaklıklarındaki hissedarlara sağlanan faydaların aynılarını yaşamaları amacıyla oluşturulmuştur (Chan, Erickson ve Wang, 2003:3).

GYO'ların oluşturulmasından önce, yatırımcılar sadece emlak piyasasından gayrimenkul satın alabilirdi, borsadan almaları ise mümkün değildi. GYO'ların oluşturulmasıyla birlikte, mülklerin, şirket veya tröst şeklinde oldukları için, menkul kıymetler borsasında ticareti mümkün hale gelmiştir. Diğer Bir başka ifadeyle, yatırımcılar bir gayrimenkul havuzu ve/veya ipotek havuzu satın alma niyetiyle borsadan GYO hisse senedi satın alabilirler. Böylece GYO konsepti, küçük yatırımcıların gayrimenkule yatırım yapmasını mümkün ve uygun hale getirmiştir (Chan, Erickson ve Wang, 2003:3).

GYO konsepti 1960'larda ilk çıktığında yatırımcıların gayrimenkul alım gücü daha yüksekti. Son yıllarda dünya nüfusunun artması ve sermaye dolaşımının kolaylaşmasıyla beraber gayrimenkul fiyatları oldukça arttığından, küçük yatırımcının gayrimenkul alabilirliği giderek azalmaktadır. Bu bağlamda GYO'lar küçük yatırımcılara büyük umutlar sunmaktadır.

GYO'ların ülke ekonomisine çok farklı faydaları vardır. Bir yandan gayrimenkullerin, menkul kıymetleştirilmesini sağlarlar diğer yandan sağlıklı ve düzgün kentleşmeye yardım ederler. Ayrıca küçük yatırımcılara likidite sağlarlar. Yani küçük yatırımcı tüm varlığını bir gayrimenkule yatırdığında nakit ihtiyacı olabilir. Daha sonra ise bu gayrimenkulün paraya dönmesi zaman ve ekstra maliyet gerektirebilir. Ancak GYO hisse senetleri borsada kolayca satılabilir. Bu sayede küçük yatırımcılar, ayrıca profesyonel gayrimenkul portföy yönetimi hizmeti de almış olurlar (Çolak & Alıcı, 2001:2).

GYO'lar kayıt dışılığı önleyerek de ekonomiye katkı sağlarlar. Türkiye'de GYO işlemlerindeki değerler, ekspertiz raporu dikkate alınarak uygulanır. Ayrıca her türlü faaliyetler SPK gözetiminde gerçekleştirilir ve kamuya duyurulur (Çolak & Alıcı, 2001:2-3).

Kısaca GYO'lar, sağlam esaslarla kurulup işletilirse ekonomiye çok farklı nitelikte fayda sağlarlar. Atıl gayrimenkullerin değerlendirilmesi, tutarca yüksek altyapı yatırımlarının finanse edilmesi, sermaye piyasasına yeni yatırımcı kazandırılması, GYO'ların kendilerinin gayrimenkul

TEDARİKÇİ SEÇİMİ VE ÇOK KRİTERLİ KARAR VERME

Hazal AKBAL[1]

1 Dr. Öğr. Üyesi, Niğde Ömer Halisdemir Üniversitesi, Zübeyde Hanım Sağlık Hizmetleri Meslek Yüksekokulu, Tıbbi Hizmetler ve Teknikler Bölümü, hazalakbal@ohu.edu.tr, ORCID ID:0000-0002-5129-9773

GİRİŞ

Günümüz sıkı rekabet koşullarında ayakta kalabilmek, kaliteli hizmetler ve ürünler sunmak birçok faaliyetin etkin yönetimi ile mümkündür. Bu faaliyetlerden biri de tedarik zincirinin yönetimidir. Tedarik zinciri yönetimi kısaca, kaynak akışı ile müşteri talebinin yerine getirilmesi amacıyla zincir üyelerinin birbiri ile uyumlu hale getirilmesidir. Tedarik zinciri yönetimi birçok fonksiyonu bünyesinde barındıran bileşenlerden oluşmaktadır. Önemli bileşenlerden birisi de tedarikçi seçimidir. Tedarik zincirinin yönetiminde önemli bir yer tutan tedarikçi seçimi, çok kriterli ve karmaşık bir süreçtir. Tedarik zincirinde en uygun tedarikçiyi seçmek fiyat, kalite, teslimat zamanı, garanti politikası, güvenilirlik gibi birden çok kriteri göz önüne alarak optimal seçimin yapılmasıdır.

AHP, TOPSIS, GİA, VIKOR, MOORA, ELECTRE gibi yöntemler tedarik seçimi problemlerinde en sık kullanılan çok kriterli karar verme (ÇKKV) yöntemleridir. Bu bölümde ilk olarak tedarik zincirine ilişkin kavramsal çerçeve sunularak tedarikçi seçiminin değerlendirilmesinde kullanılan kriterler ile seçim sürecine dair bilgiler verilecektir. Çok kriterli karar verme hakkında bilgiler sunularak tedarikçi seçiminde karar vericilerin etkin karar verme süreçlerinde sıklıkla kullanılan çok kriterli karar verme yöntemleri ele alınacaktır.

1. KAVRAMSAL ÇERÇEVE

Tedarikçi seçim kararı değerlendirilmeden önce tedarik, tedarikçi ve tedarik zinciri gibi kavramların ne ifade ettiğinin bilinmesinde fayda vardır. İlgili kavramlara ilişkin açıklamalar aşağıda sunulmuştur.

1.1. Tedarik, Tedarikçi, Tedarik Zinciri Kavramları

Tedarik zinciri yönetimine olan önem firmaların kendi organizasyonları içerisinde ve dışında işbirlikçi ilişkilerin yararlarını gördükleri 1980'li yıllardan itibaren sürekli olarak artış göstermiştir. Firmalar artık tedarikçilerinden ve tedarik zinciri elemanlarından ayrı olarak etkin bir biçimde rekabet edemeyeceklerini düşünmektedir. Tedarik zinciri, hammadde ve parça tedariki, stok takibi, imalat, depolama, montaj, sipariş yönetimi, dağıtım ile müşteriye teslimata kadar bir ürünün ham maddeden müşteriye teslim edilmesiyle ilgili tüm faaliyetler ve bu faaliyetlerin gerçekleştirilmesi için önemli bilgi sistemleridir (Lummus ve Vokurka, 1999: 11).

Tedarik kavramı Türk Dil Kurumu tarafından "*araştırıp bulma, sağlama, elde etme"* anlamlarına gelirken, tedarikçi kavramı ise "*gerekli olan malzemeyi sağlayan kimse*" olarak tanımlanmaktadır (TDK, 2023). Bir tedarikçi, planlı bir biçimde tasarlanan ve yönetilen bir tedarik zincirinin unsuru olursa tedarik zincirinin bütününün rekabet avantajı artar. Bu nedenle doğru ve uygun tedarikçi seçimi tekin tedarik zinciri yaratmanın

1. Giriş

Gün geçtikçe kripto varlıklar daha önemli bir yatırım aracı olarak görülmektedir. Kripto varlıkların ilki ve en bilineni olan Bitcoin, takma adı Sathoshi Nakamoto olarak bilinen kişi veya grup tarafından yazılan "Bitcoin: A Peer-to-Peer Electronic Cash System" başlıklı bir makalede yer almaktadır (Hmeed ve Farooq, 2016). 2008 küresel finans krizin ardından insanların tam da finans dünyasına olan güvenini kaybettiği dönemde yayınlanan bu makale, başka bir para birimine ilişkin teknik analiz raporu yayınlaması zamanlama açısından oldukça manidar görülebilir. İlgili makale, kripto para birimi olan Bitcoin'i, kriptografik kanıta dayalı bir elektronik ödeme sistemi olarak tanımlar ve bu sistemde iki taraf doğrudan birbirine bağlı olduğunu vurgular. Bitcoin'i açıklayan araştırma, e-ticaretin büyüme trendi göz önüne alınarak bankaların sunduğu aracılık hizmetlerini eleştirmek suretiyle bankacılık sektörüyle ilgili eleştiler de içermektedir. İlgili makale, geliştiricilerin blockchain teknolojisini bir kripto para birimi altyapısı olarak nasıl hazırladığını ve çalıştırdığını teknik bir bakış açısıyla ortaya koymaktadır. Aynı zamanda küresel teknolojik krizden sonra güven sorununun nasıl çözüleceğine dair yeni bir anlayış kazandırmaya çalışmaktadır. Bu minvalde şifrelenmiş kripto paraların en önemli özelliği, para basma yetkisine sahip otorite yerine şifreli, sınırlı sayıda, matematik kurallarına ve bilgisayar algoritmalarına dayalı bir güvene dayanmasıdır. (Dilek, 2022: 10).

Kripto varlıklara yatırım yapmak ve bu varlıkları bir ödeme aracı olarak kabul etme bir yöntem olarak görülmektedir. Kripto varlık yatırımcı sayısı ve hacmi büyüdükçe kripto varlık faaliyetlerini kapsayan mali hesaplar hakkında bir güvence sağlanması daha önemli hale geliyor. Mastercard ve Visa, uluslararası ödemelerde kripto varlık kabulünü ve bu konuda anlaşmalar yapmayı planlıyor. Ayrıca, Tesla ve PayPal da dahil olmak üzere birçok şirketin kripto para cinsinden ödeme kabul ettiği biliniyor (Bhambhwani vd., 2021). Bunun yanında, Facebook Libra ugulaması duyurulduktan sonra her ne kadar libra bir ödeme aracı olarak tasarlansa da kripto varlıklarının kullanımı yalnızca değer depolama amacıyla değil, aynı zamanda ödeme aracı olarak değerlendirilmesini tekrar gündeme getirdi. Dahası bazı Amerikan bankalarının daha yüksek bir karşılık ayırarak kripto varlıkları kabul ettiği bilinmektedir. Bununla birlikte, kripto varlık ekosisteminin tipik finansal araç piyasasından farklı olması, yeni risk ve sorunları ortaya çıkararak, denetçilerin kripto varlık işlemlerinin dahil olduğu mali denetimleri makul düzeyde ve yeterli denetim kanıtı elde etmesini zorlaştırıyor (Fujiki, 2020). Bu noktada kripto varlıkların değer biriktirme işlevini incelemek için, finansal okuryazarlığın varlık birikimi üzerindeki etkilerini dikkate almak önemlidir (Lusardi ve Mitchell, 2014; Gomes vd., 2020).

BÖLÜM 5

KAMU ÇALIŞANLARININ ÇEVRE SORUMLULUĞUNA BAĞLI TÜKETİM BİLİNCİ ÜZERİNE BİR İNCELEME

Kübra ECER[1]

1 Dr., İletişim Uzmanı, T.C. Cumhurbaşkanlığı İletişim Başkanlığı, kubraecr@gmail.com

GİRİŞ

Bireylerin tüm canlıların etkileşimde olduğu doğada yer alan kaynakları tamamen tüketmeden yararlanabilmeleri sürdürülebilir çevre anlayışı ile mümkündür. Geçmişte insanların doğal kaynakları bilinçsizce kullanması, kendilerinden sonraki nesillerin birçok çevre sorunu ile yüzleşmesine neden olmuştur.

Çevreye zarar verilmemesi ve çevrenin sürdürülebilir olması hususundaki farkındalık, bireysel ve siyasal boyutlarda çevre bilincinin geliştirilmesi ile mümkündür. Oluşan bilinç ile çevre üzerinde etkisi olan sorunların bireyler tarafından nasıl algılandığı ve bu sorunlara karşı gösterilen tepkiler çevre duyarlılığının düzeyine göre şekillenmektedir. Çevreye karşı sorumluluk ve bilinç düzeyi bireysel özelliklere göre farklılık göstermektedir (Yücel, Uslu, Altunkasa, Güçray ve Say, 2006). Bireylerin tüketim tercihleri de çevre sorumluluğuna bağlı olarak şekillenmektedir. Her ne kadar insan eliyle çevreye birçok şekilde zarar verilmiş olsa da, bireyler hem kendileri hem de tüm canlılar için çevreyi iyileştirme isteğine sahiptir. Bu istek gelecek nesillerinde iyi bir çevre de yaşayabilmesi amacıyla bireysel düzeyde kalmayarak ulusal ve uluslararası bir mesele olarak ele alınmaktadır. "Fakat bireysel düzeyde insanlar israf tutumlarını azaltmadıkları, su ve enerji tasarrufu yapmadıkları, geri dönüştürülebilir ürünleri tercih etmedikleri, çevreyi aktif olarak korumadıkları takdirde çevre bilincine sahip olduğu söylenememektedir" (Erten, 2004).

Bireylerin eğitim düzeylerinin artması, teknolojik gelişmeler ışığında bilgiye erişimin daha kolay hale gelmesi ile toplumda çevreye karşı sorumluluk ve bilinç düzeyi artma eğilimindedir. Çevreye karşı sorumluluk bilinci birçok alanda olduğu gibi bireylerin tüketim davranışlarını da yönlendirmektedir. Çevre sorumluluğuna bağlı tüketim bilincinin oluşması sadece bireyi değil tüm toplumu ilgilendiren bir olgudur. Bireylerin tüketim alışkanlıkları, çevrenin bozulmasına etki eden birçok faktörün etkisini arttırmakta ya da azaltmaktadır. Bu nedenle tüketicilerin çevre sorumluluğuna dair tüketim bilinci üzerine yapılacak araştırmalar ve elde edilen bulguların analizi, toplumda çevre farkındalık düzeyinin artması için önemlidir. Çevreye karşı sorumluluk ve bilinci arttırmanın öneminin anlaşıldığı günümüzde, kamu sektöründe çalışan bireylerin tüketim davranışlarının çevre sorumluluğuna bağlılığının ne düzeyde olduğunun anlaşılması, toplumdaki diğer tüketicilerin de duyarlılığının artmasına yardımcı olacağı düşünülmektedir.

Araştırmanın temel amacı, kamu çalışanlarının bireysel tüketimlerinin yanı sıra görev yaptıkları kamu kurumlarının tüzel kişilikleri adına da tüketim karar vermeleri nedeniyle çevre sorumluluğuna dair tüketim bilinci hakkında detaylı bilgilere ulaşmaktır. Bu amaçla farklı yaş, eğitim ve

BİLGİ ÇAĞINDA ÖRGÜTSEL DAVRANIŞ

Kaya AĞIN[1]

1 Dr. Öğr. Üyesi Kaya AĞIN, Erzincan Binali Yıldırım Üniversitesi, Meslek Yüksekokulu, Yönetim ve Organizasyon Bölümü, kagin@erzincan.edu.tr, Orcid No: 0000-0003-2783-5334

Giriş

Örgütsel davranış, örgütlerde çalışanların davranışlarını inceleyen bir disiplindir. Bu disiplin, çalışanların nasıl davrandıklarını, neden böyle davrandıklarını ve bu davranışların örgütün performansı üzerindeki etkisini inceler. Bu disiplin, psikoloji, sosyoloji ve yönetim gibi çeşitli disiplinlerden etkilenmektedir (Greenberg, 2011). Örgütsel davranış, bir organizasyonun işleyişini etkileyen faktörleri inceleyen çok disiplinli bir alandır. Bu faktörler arasında insan davranışları, organizasyonel yapı, kültür, yönetim stil ve işgücü çeşitliliği gibi konular yer almaktadır.

Örgütsel davranış, iş yaşamında oldukça önemli bir konudur. İşletmelerin hedeflerine ulaşmaları ve çalışanların performanslarını artırmaları için örgütsel davranışın etkin bir şekilde yönetilmesi gerekmektedir. İş yaşamında örgütsel davranış, çalışanların işletmedeki davranışlarına ve etkileşimlerine odaklanır. Bu kapsamda, çalışanların birbirleriyle nasıl etkileşimde bulundukları, nasıl motivasyon sağlandıkları, nasıl liderlik edildikleri, işletmedeki kültürün ne olduğu gibi konular ele alınır. Bu faktörler, çalışanların işletmedeki rollerini anlamalarına, işletmenin amaçlarına uygun olarak davranmalarına ve işletme performansının artmasına yardımcı olur.

Örgütsel davranışın iş yaşamındaki etkileri arasında çalışan memnuniyetinin artması, işbirliğinin teşvik edilmesi, liderliğin geliştirilmesi, işletme kültürünün iyileştirilmesi ve değişime uyum sağlanması yer alır. Tüm bu faktörler, işletmenin başarısına katkı sağlar ve çalışanların iş yaşamında daha mutlu, daha verimli ve daha başarılı olmalarını sağlar. Örgütsel davranışın iş yaşamındaki önemi büyüktür ve işletmelerin başarısı için oldukça önemlidir. İşletmelerin çalışanlarının davranışlarını yönetmeleri, işletmenin hedeflerine uygun olarak çalışmalarını sağlamaları ve işletmenin performansını artırmaları için örgütsel davranışı etkin bir şekilde yönetmeleri gerekmektedir.

Bu alandaki çalışmalar, özellikle işletmelerin hedeflerine ulaşmalarına yardımcı olmak için yöneticilere ve liderlere rehberlik eder. Örneğin, çalışanların motivasyonunu artırmak, takım çalışması becerilerini geliştirmek, liderlik becerilerini iyileştirmek ve işyerindeki iletişimi geliştirmek gibi hedeflere ulaşmak için örgütsel davranış çalışmalarından faydalanılabilir (Colquitt vd., 2011).

Örgütsel davranış, organizasyonel yapı, kültür ve liderlik tarzları gibi konuların yanı sıra, çalışanların davranışlarını da inceler. Bu, çalışanların neden bazı davranışlarda bulunduklarını, işyerindeki ilişkileri nasıl yönettiklerini ve nasıl daha iyi performans gösterebileceklerini anlamak için araştırmalar yapılmasını içermektedir. Örgütsel davranış, organizasyonların insan kaynakları yönetimine odaklanan, disiplinler arası bir alan ola-

rak tanımlanabilir. İşletmelerin hedeflerine ulaşmalarına yardımcı olmak için yöneticilere ve liderlere rehberlik eder ve çalışanların davranışlarını inceler (Fortune, 2009).

Örgütsel davranışın ana konularından bazıları şunlardır (Adams, 2002):

1. Liderlik: Liderlik, örgütlerde çalışanların davranışları üzerinde büyük bir etkiye sahiptir. Liderlik, örgütlerin performansını etkiler, çalışanların motivasyonunu artırır ve çalışanların hedeflerine ulaşmalarını sağlar. Örgütsel davranış, liderlik tarzları, liderlik etkinliği, liderlik gelişimi ve liderlik becerileri gibi konuları inceler.

2. İletişim: İyi bir iletişim, örgütlerdeki çalışanların etkileşimini geliştirir ve örgütün performansını artırır. İletişim, örgütlerdeki karar verme süreçlerinin etkinliğini artırır, çalışanların işleri hakkında daha iyi bilgilendirilmesini sağlar ve çalışanların motivasyonunu artırır. Örgütsel davranış, iletişim tarzları, iletişim kanalları, iletişim engelleri ve etkili iletişim teknikleri gibi konuları inceler.

3. Motivasyon: Çalışanların motivasyonu, örgütlerin başarısı için önemlidir. Motivasyon, çalışanların işlerinde daha iyi performans göstermelerini sağlar, çalışanların örgüte sadakatini artırır ve çalışanların işlerine bağlılığını artırır. Örgütsel davranış, motivasyon teorileri, motivasyon stratejileri ve motivasyon faktörleri gibi konuları inceler.

4. Gruplar ve Takımlar: Örgütlerdeki gruplar ve takımlar, çalışanların davranışlarını etkiler. Gruplar ve takımlar, çalışanların birbirleriyle işbirliği yapmalarını sağlar, çalışanların birbirlerine destek olmalarını ve motivasyonlarını artırır. Örgütsel davranış, grup dinamikleri, grup karar verme süreci, takım performansı ve takım yönetimi gibi konuları inceler.

5. Örgüt Kültürü: Örgüt kültürü, örgütlerdeki çalışanların davranışları üzerinde büyük bir etkiye sahiptir. Örgüt kültürü, örgütlerin değerlerini, inançlarını ve normlarını yansıtır. Örgüt kültürü, çalışanların örgüte bağlılığını artırır, çalışanların iş tatminini artırır ve örgütlerin performansını etkiler. Örgütsel davranış, örgüt kültürünün oluşumu, yönetimi ve değiştirilmesi gibi konuları inceler.

6. Değişim Yönetimi: Değişim yönetimi, örgütlerin değişen iş ortamında ayakta kalabilmeleri için değişim süreçlerini planlamalarına, uygulamalarına ve kontrol etmelerine yardımcı olan bir süreçtir. Değişim yönetimi, örgütlerin içinde bulundukları durumu analiz ederek, örgütün karşılaştığı zorlukları belirleyerek, uygun stratejiler ve araçlar kullanarak değişimi yönetmeyi amaçlar.

BÖLÜM 7

SÜRDÜRÜLEBİLİRLİK, SÜRDÜRÜLEBİLİR KALKINMA VE YENİLENEBİLİR ENERJİ

Yunus BUDAK[1]

1 Dr. Öğr. Üyesi, Ağrı İbrahim Çeçen Üniversitesi, Ağrı Meslek Yüksekokulu, Ulaştırma Hizmeti Bölümü, ORCID: 00000003-3126-743X, ynsbdk04@gmail.com

1.GİRİŞ

Sanayileşme ile birlikte iktisadi değişimlerin yaşandığı ve günümüz dünyasına gelene kadar birçok değişimin meydana geldiği mevcut ekonomik politiğin sürdürülebilir olmadığı görülmektedir. Dünya ekonomisinin sürekli büyüme isteğinin mevcut koşullar altında devamlılığının sağlanması imkânsıza yakın bir hal almıştır. Üretim için kullanılan yakıtların yenilenebilir enerji kaynaklarından ziyade, fosil yakıtlardan karşılanmasından dolayı ortaya çıkan sera gazların çevre üzerinde meydana getirdiği olumsuzlukların birçok unsur üzerinde baskı oluşturmuştur. Özellikle ekonomik büyüme ve kalkınmanın sürekliliğinde negatif etkiler ile birlikte, gelecek kuşakların da hayatlarının tehlike altında olması bu olumsuzlukların başında gelmektedir.

Toplumların enerji kullanımı sadece sanayileşme ile birlikte ortaya çıkan bir zaruriyet değildir. Aynı zamanda iktisadi ve sosyal bir hayatın devam etmesi için de zorunlu tüketim kalemleri arasında bulunmaktadır. Toplumların gelişmişlik düzeyi erişilebilen ve aynı zamanda tüketilebilen enerji miktarına bağlı olarak değişebilmektedir. Dünya üzerinde tüketilen enerji miktarı sürekli artış göstermekle beraber, insan yaşamının devamlılığı sağlayan hava, su gibi temel kaynaklar sürekli kirlenmekte ve bu kirlilik sürekli artış göstermektedir. Bu ilişkinin nihayetinde yaşamın birçok tarafını tehdit etme seviyesine ulaşmıştır. Birey ve toplumlar mevcut yaşamsal kolaylıklarını sağlayabilen günümüz teknolojisinin temel kaynağı olan kullanılan enerjinin azaltılması için bir şey yapmamakta, aksine bu kullanımı sürekli arttırmaktadır (Akova, 2008: 1).

Sürdürülebilir kalkınma bugünün ihtiyaçlarını karşılamakla beraber, gelecek nesillerin refahlarında herhangi bir olumsuzluğa neden olacak eylemlerden kaçınma durumudur. Bu açıdan aynı zamanda mevcut zaman diliminde uygulanan politikaların gelecek nesillerin ihtiyaçlarını karşılaması gerekliliği sürdürülebilir kalkınma için son derece önem arz etmektedir. Sürdürülebilir kalkınma için büyümenin tetikleyici unsur olduğu bilinme beraber, esas olan kalkınma için iktisadi ve sosyal atılımların yaşanmasıdır. Bu açıdan temel iktisadi politikaların politika yapıcıları tarafından kalkınma odaklı bir düzleme oturtulması gerekmektedir. Sürdürülebilir kalkınmanın sağlanmasında diğer gerekli olanların başında çevresel faktörler gelmektedir. Sürdürülebilirlik için yenilenebilir enerji kaynaklarının kullanımının artması ve kullanım açısından toplumun tüm tabakları arasında eşit pay edilmesi gerekmektedir.

Kalkınma için birçok değişken önemli olmakla beraber, enerji bu değişkenler arasında büyük önem arz etmektedir. Sanayileşmenin çok ileri seviyede olduğu günümüz dünyasında büyüme için enerji girdileri çok fazladır. Nüfus artışları ile birlikte büyük üretimlerin gerçekleşmesi enerji

TÜRKİYE'NİN ORTA GELİR TUZAĞINDAN ÇIKIŞINDA KAMU TEŞVİK MEKANİZMASININ DAHA ETKİN HALE GETİRİLMESİ İÇİN YAPILMASI GEREKEN HUSUSLARIN DEĞERLENDİRİLMESİ[1]

Ali SAKLAN[2]

1 Prof. Dr. Ahmet Diken ve Prof. Dr. Uğur Adıgüzel danışmanlığında Ali Saklan'ın "Orta Gelir Tuzağı'ndan Çıkışta Kamu Teşvik Politikalarının Rolü, Ülke Uygulamaları ve Türkiye Açısından Bir Model Önerisi" başlıklı Doktora Tezinden türetilmiştir.

2 Dr. İç Denetçi, Necmettin Erbakan Üniversitesi İç Denetim Birim Başkanlığı, İstanbul Üniversitesi Sosyal Bilimler Enstitüsü Kamu Hukuku Anabilim Dalı, Mali Hukuk Bilim Dalı Doktora Öğrencisi, asaklan@erbakan.edu.tr, Orcid: https://orcid.org/0000-0002-2498-808X.

Giriş

Dünya üzerinde ülkelerin refah düzeylerinin ölçülmesinde kullanılan en önemli ölçütlerden biri hiç şüphesiz kişi başına düşen milli gelirdir. Bu ölçüte göre Dünya Bankası tarafından dünya ekonomileri sıralanmakta, yapılan bu tasnifle ülke ekonomileri sırasıyla yüksek, orta ve düşük gelirli ülke ekonomileri olarak değerlendirilmektedir. Ayrıca Dünya Bankası tarafından yapılan sınıflandırmada, orta gelirli ülke ekonomileri de iki alt gruba ayrılmakta, Dünya Bankası tarafından belirlenen kişi başına düşen milli geliri 1.086 $-4.255 $ arasında olan ülkeler düşük orta gelirli ülke, 4.256 $- 13.205 $ arasında olan ülkeler ise yüksek orta gelirli ülke ekonomisi olarak sıralanmaktadır[1]. Ülke ekonomilerinin orta gelir tuzağına düşüp düşmediklerinin tespitinde bu sıralama bir ölçüt olarak dikkate alınmaktadır. Bu noktada orta gelir tuzağı; orta gelir grubunda yer alan ülke ekonomilerinin yüksek gelir grubuna geçemeyip, burada takılması olarak tanımlanabilir. Konu bu açıdan değerlendirildiğinde; orta gelir tuzağı, sıralamada uzun yıllar boyunca orta gelir grubunda bulunup yüksek gelir grubuna geçemeyen ülkelerin içinde bulunduğu durum olarak ifade edilmektedir. Konu Türkiye ekonomisi açısından değerlendirildiğinde; Türkiye yaklaşık 50 yıl boyunca düşük orta gelirli ülke ekonomileri arasında yer aldıktan sonra, 2005 yılı itibariyle yüksek orta gelirli ülke ekonomileri arasında kendisine yer edinmiştir (Yeldan vd., 2012).

Dünya ekonomileri arasında orta gelir tuzağı kavramı geniş yankı bulmaktadır. Bu konuda yapılmış çalışmalarda literatürde yerini almıştır. Dünya ekonomilerine orta gelir tuzağı açısından bakıldığında; orta gelir tuzağına yakalanmış ülkeler olduğu gibi, orta gelir tuzağı sürecine girmiş, gerekli etkinliği ve verimliliği gösterip bu tuzaktan çıkış göstermiş ülke ekonomileri de bulunmaktadır. Orta gelir tuzağı sürecini bu şekilde yaşayıp bu süreci aşan ülke ekonomileri örneklerinin bulunması, hiç şüphesiz Türkiye ekonomisi için de (ki böyle bir tuzak içinde adının geçtiği dikkate alındığında) büyük önem arz etmektedir.

Günümüzde Türkiye ekonomisine bakıldığında, 65 yıla yakın orta gelirli grup ekonomileri arasında yer alan bir ekonomi tablosu karşımıza çıkmaktadır. Son dönemde ekonomide gösterdiği ivme haricinde, 1965'ten (düşük orta gelirli ülkeler arasına katıldığı yıl) 2000'li yılların başındaki krize kadar ki periyotta Türkiye ekonomisinin yıllar itibariyle durağan konumunu koruduğunu, belli bir sıçrama kaydedemediği görülmektedir. Orta gelir tuzağı kavramı Türkiye açısından değerlendirildiğinde, Türkiye'nin orta gelir tuzağına düştüğü veya orta gelir tuzağı sürecine girdiği veya yakınlaştığı ifade edilmektedir. Yapılan bu çalışmada bu hususlar incelenmeye çalışılmıştır.

Çalışmamızın bir başka yönü Türkiye'nin kamu teşvik politikalarıdır. Bilindiği üzere teşvik, ülkenin kalkınmasına ve gelişmesine ön ayak ola-

1 Çalışmanın türetildiği doktora tezinde 2017 yılına ilişkin veriler yer almaktadır.

ÖRGÜTSEL ADALET VE ÖRGÜTSEL SESSİZLİK ÜZERİNE KAVRAMSAL BİR ÇALIŞMA

Meryem GÜL[1]

1 Dr. Öğr. Üyesi, Osmaniye Korkut Ata Üniversitesi, Düziçi MYO, meryemgul@osmaniye.edu.tr, ORCID: 0000-0003-3668-6879.

GİRİŞ

Günümüzde bireyler, çevrelerinde olup biten olayların ne derece adil olduğunu sorgulamakta ve karşılaşılan adaletsizliklere farklı şekillerde tepkide bulunmaktadırlar. Bireylerin günlük yaşamlarında adalet algılarını en çok değerlendirdikleri ortam, çalıştıkları örgütler olmaktadır. Örgütlerdeki personel seçimi, performans değerleme, ödüllendirme, ücretlendirme, görevlendirme, eğitim programları, terfi, yetkilendirme ve iş ile ilgili malzemelerin temini gibi uygulamalar çalışanların adalet algıları üzerinde etkili olmaktadır. Çalışanlar, aldıkları ücretin adil olup olmadığı, yöneticilerin adil davranıp davranmadığı ve ödüllerin adaletli bir şekilde dağıtılıp dağıtılmadığı konularındaki algıları nedeni ile örgüte karşı bazı davranış kalıpları geliştirmektedir. Bu durum, örgütsel adalet kavramının öneminin artmasına neden olmuştur (İyigün, 2012: 50).

Örgütsel adalet, çalışanların adil muamele algısı, çalışanlar ve örgütleri arasındaki sosyal ve ekonomik alışveriş algısı, ödüllerin dağıtılmasına ilişkin kurallar dizisi gibi farklı şekillerde tanımlanmaktadır (Ölçer ve Çoşkun, 2022: 5). Örgütsel adalet, işyerinde uygulanan süreçler ve çalışanların elde edilen sonuçlara ilişkin algılarıdır. Çalışanlar, kendilerini diğer çalışanlarla kıyaslar ve gördükleri muamelenin adil olduğunu düşünürlerse örgütsel adaletin var olduğunu algısına sahip olurlar. Kurum içi uygulamaların adil olduğunu düşündüklerinde, daha fazla moral ve motivasyonla çalışarak performanslarını artırırlar (Yavuz, 2022:226). Eğer çalışanlar, çevrelerinde meydan gelen olayları adil olarak değerlendirmez ise bazen alınan kararlara karşı çıkarak ya da onaylamayarak tepkiler verebilmekte, bazen de olaylar karşısında sessiz kalarak pasif davranma şeklinde tepkide bulunmaktadır. Nitekim bireyin olaylar karşısında sessiz kalma davranışını tercih etmesi de bir tepki olarak görülmektedir (Serinkan ve Mengüloğlu, 2021: 30).

Örgütsel sessizlik, çalışanların olumsuz bir eleştiri almamak ya da oluşabilecek tepkilerden dolayı bilinçli olarak örgüt ile ilgili bilgi, fikir, görüş ve önerilerini bilinçli olarak saklamasıdır. Örgütlerde çalışanlar; işini kaybetme korkusu, dışlanmaktan kaçınma, utanç duymaktan korkma veya örgüt kültüründeki ahlaki kurallar nedeni ile sessiz kalmayı tercih etmektedir (Kıranlı-Güngör ve Potuk, 2018: 725). Fikir ve düşüncelerinin örgüt açısından önemsiz olduğu algısına sahip olan çalışanlar, fikir ve düşüncelerini dile getirdiğinde olumsuz tepki alacağını düşünerek sessiz kalmayı tercih etmektedir. Bu durum, örgüte katkı sağlayacak fikir ve düşüncelerin ortaya çıkmasını engelleyecek ve verimliliği düşmesine neden olacaktır. Örgüt içerisinde fikir ve düşüncelerini açıkça dile getirebilen çalışanlar, örgütün gelişiminde doğrudan katkıda bulunduğundan örgütlerde çalışanların sessizliği istenmeyen bir durumdur (Şahin, 2020: 104).

BÖLÜM 10

ÇAĞDAŞ MALİYETLEME YAKLAŞIMLARI: ÜRÜN YAŞAM SEYRİ MALİYETLEME

Önder GÜR[1*]

1 [*]Öğretim Görevlisi Doktor, Kırklareli Üniversitesi, Babaeski Meslek Yüksekokulu, Finans, Bankacılık ve Sigortacılık Bölümü, Kırklareli, Türkiye, ondergur@klu.edu.tr, Orcid: 0000-0003-3249-4300

GİRİŞ

Üretilen hemen her ürünün bir yaşam süresi vardır. Her ürün birtakım çalışmalar sonucu piyasaya sürülmekte ve belirli aşamaları geçtikten sonra farklı nedenlerden kaynaklı olarak alıcı bulamamaktadır. Gerek yeni niteliklere sahip bir ürünün çıkması gerekse yerine getirdiği işlevin gereksizleşmesi sonucu talep görmediği için piyasadan çekilmektedir. Bir ürünün piyasadan çekilmesi, ürünün rekabet ortamına ve teknolojik gelişim hızına göre farklılık gösterebilmektedir. Bu nedenle ürün yaşam seyrinin (ÜYS), pazarlama yaklaşımlarıyla incelenmesi gerektiği gibi maliyet yönetimi açısından da incelenmesi bir ihtiyaç olarak doğmuştur.

Ürünün tasarımı, tasarımın iyileştirilmesi ya da tasarım değişikliği, maliyetinin ve pazara sunma süresinin azaltılması için geliştirilen yaşam döngüsü mühendisliği, günümüzün rekabetçi küresel pazarında bu sorunlara yönelik etkin çözüm sunan bir yaklaşım olarak doğmuştur. Bu yaklaşım ürün tasarlama, üretme, kullanma ve elden çıkarma da dahil olmak üzere yaşam seyrinde ortaya çıkan tüm maliyetlerle ile ilgilenmektedir (Lui & ark., 2008:1007). Bu yönüyle ürünün yaşamı boyunca oluşturduğu maliyetleri dikkate alındığı için dönemler itibariyle farklı bakış açıları ile ilişkilendirilebilir. Ürünün yaşam seyri maliyeti üreticinin, tedarikçinin, kullanıcının veya daha geniş bir vizyon ile bakılırsa toplumun bakış açısıyla değerlendirilebilir (Lindholm & Suomala, 2007:651).

Artık yönetim muhasebesinin de bir parçası olan bu yaklaşımla ürünün üretim maliyetleri kadar diğer evrelerinin maliyetlerini de dahil ederek ürünün yaşam seyrinin yönetilmesi hedeflenmektedir (Blocher & Stout & Cokins, 2010:12). Geleneksel maliyet yaklaşımları ile karşılaştırıldığında, ürün yaşam seyri maliyetleme (ÜYSM)'nin en belirgin özelliği "etkin maliyet bilgisi" üretme olduğu görülmektedir. Zamana karşı yarışılan bir ortamda yeni mamullerin düşük maliyetle, yüksek kalitede ve hızlı bir biçimde piyasa sunulmasını sağlama amaçlı üretilen bilgilerin işletmelere önemli bir rekabet avantajı sağlayacağı düşünülmektedir (Otlu & Kararca, 2005:245). Özellikle bir ürünün toplam yaşam seyrinin maliyetlerinin %70'den fazlasının tasarım aşamasında oluştuğu bilinmektedir. Yaşam seyrinin sonuçlarını dikkate alan tasarımcılar, ürünlerin maliyetlerini önemli ölçüde azaltabilirler (Seo & ark., 2002:461). Diğer yandan işletmeler satışını yapacağı ürünün yaşam evrelerini bilmesi, ürün geliştirme faaliyetlerinin daha iyi planlanmasına katkı sağlayacaktır. Bu durumun uzun vadede maliyetleri azaltacağı düşünülürse, elde edilen kârı artıracak ve diğer yandan rakiplerine karşı üstünlük de sağlamış olacaktır.

Ürünün yaşamı boyunca oluşan maliyetler, ürünün yaşam seyrinin analizini yapmayı beraberinde getirmiştir. Analiz yapılmasının amacı, üretilen ürünün uzun vadede sağlayacağı faydanın ölçülmesine dayan-

LATİN AMERİKA ÜLKELERİNİN BÖLGESEL- KÜRESEL DEĞER ZİNCİRLERİYLE ENTEGRASYONU

Mehmet Fazıl ÖZKUL [1]

1 Mehmet Fazıl ÖZKUL, Dr, Rekabet Kurumu, Orcid ID: ORCID: 0000-0001-7113-3343

Giriş

Neo liberal politikaların geçtiğimiz yüzyılın sonunda küresel ölçekte yaygınlaşması, ekonomik entegrasyon faaliyetlerini derinleştirmiştir. Bölge ülkeleri arasındaki derin ekonomik entegrasyon ve geniş üretim ağları, bölgesel küresel değer zinciri (KDZ) faaliyetlerini de arttırmaktadır. Bölgesel değer zincirlerinin güçlenmesinde bölgesel hubların yani merkezlerin varlıkları önemli rol oynamaktadır.

Meng ve arkadaşlarına göre (2019), dünyada bir hub ve etrafında çevre ülkelerden oluşan üç önemli bölge bulunmaktadır: Çin'in hub olduğu Doğu- Güneydoğu Asya, ABD'nin hub olduğu Kuzey Amerika ve Almanya'nın hub olduğu AB. Söz konusu Bölgelerde ülkelerin arasındaki ticaretin büyük bir bölümü bölge içinde gerçekleşmektedir. Latin Amerika içinde bir ülkenin hub olarak ortaya çıkmaması üretim ağlarının dolayısıyla değer zincirlerinin bölgesel düzeyde gelişmesini kısıtlamaktadır (Li ve diğerleri 2019). Bölgesel entegrasyonunun dolayısıyla değer zincirlerinin Latin Amerika'da yeterince gelişmemesinin diğer temel sebepleri, coğrafi koşular, farklı bürokratik yapılar ve ülkelerin ekonomik entegrasyona ilgili farklı beklentilerdir. Kısacası Latin Amerika'yı bir bütün olarak Doğu Asya, AB ve Kuzey Amerika gibi ekonomik entegrasyonun geliştiği coğrafi bir bölge olarak değerlendirmemek gerekmektedir. Latin Amerika kendi içinde Meksika, Orta Amerika, Güney Amerika ve Karayipler gibi alt bölgelerden oluşmaktadır. Alt bölgeler arasındaki ekonomik bütünleşme faaliyetleri daha ileri düzeyde olsa da Bölge dışı ülkelerle ekonomik ilişkiler de oldukça yoğundur. Dolayısıyla Bölge ülkeleri arasındaki ticaret ve bölgesel değer zincirlerine katılım oranı diğer bölgelerin oldukça gerisindedir. Bölge firmaları ağırlıklı olarak diğer bölgelerdeki lider firmaların değer zincirlerine katılım sağlamaktadırlar. Katılımın önemli kısmı katma değeri düşük emek yoğun aşamalarda gerçekleşmektedir. Söz konusu firmalar değer zincirlerinde yükselip katma değeri yüksek aşamalara geçiş konusunda ise akran ülkeler firmaları gibi performans gösteremektedirler. Bununla birlikte Bölge firmaları, küresel değer zincirlerinin küresel yenilik zincirlerine dönüşmesinin yarattığı fırsatlardan giderek daha fazla yararlanmaktadırlar.

Yukarıda ana hatları özetlenen çalışma beş bölümden oluşmaktadır. Girişten sonraki bölümde Latin Amerika ve Bölgeselleşme başlığı ele alındıktan sonra üçüncü bölümde Latin Amerika'da değer zincirlerine katılım diğer bölgelerle karşılaştırmalı olarak analiz edilecektir. Dördüncü bölümde Latin Amerika ülkelerinin değer zincirlerine entegrasyonu, imalat ve hizmet sektörlerinin alt başlıkları özelinde değerlendirilecektir. Son bölümde ise genel bir değerlendirme yapılacaktır.

HİLE RİSKİ YÖNETİMİNDE İÇ DENETİMİN ÖNEMİ

Özlem USMAN[1]

1 Dr. Öğretim Üyesi, Yalova Üniversitesi, İktisadi ve İdari Bilimler Fakültesi, İşletme Bölümü, ORCID: 0000-0002-1745-889X

GİRİŞ

İşletmelerde hilenin meydana gelmesine ortam hazırlayan birtakım unsurlar söz konusu olabilir. Bu unsurlar, işletmelerin yapılarına, işletmelerin faaliyette bulundukları sektöre, işletmede kurulu organizasyon yapısına, işletme yönetimlerinden çalışanların bilgi ve eğitim düzeylerine kadar çok çeşitli faktörlerden kaynaklanabilir.

Hileye ortaya çıktıktan sonra müdahale edilmesinden ziyade ortaya çıkmadan önce gereken tedbirlerin alınması ve ilgili prosedürlerin uygulamaya konulması işletmeler açısından önemlidir. Zira hile ve hile riski konularında bilinçli olmayan ve bu konuya yönelik gereken faaliyetlerde bulunmayan işletmeler maalesef hem maddi kayıplara hem de itibar, işgücü, zaman vb. anlamda kayıplara maruz kalmaktadırlar. İşletmeler ne kadar sağlıklı ve etkin işleyen sistemlere sahip olsalar da kişilerin hile faaliyetine yönelmeleri her zaman olasıdır. Bu nedenle hile riski tüm işletmeler için her zaman geçerli bir kavram olmaktadır.

Ortaya çıkan çeşitli finansal skandalların ardından önemi giderek artan iç denetim, işletmelerin faaliyetlerini geliştirme ve onlara değer katma amacı güden bağımsız, objektif olma gibi niteliklere sahip bir güvence ve danışmanlık faaliyeti olarak tanımlanmaktadır. Günümüz iş dünyasında giderek yoğunlaşan rekabet ortamı, hızlı gelişen teknolojik değişimler ve işletmelerin maruz kaldığı hile vakaları vb. unsurlar işletmelerde yeni iş yapış şekillerinin ortaya çıkmasına neden olmaktadır. Yaşanan bu gelişmeler iç denetim faaliyetlerini de etkilemektedir. Artık etkin bir iç denetim sistemi işletmenin zayıf noktalarını belirlemeyi, düzeltici önlemler alınmasına destek olmayı, risk, fırsat vb. kavramları da yorumlanmayı içerek şekilde yeniden yapılanmaktadır.

Bu çalışmada hile riski yönetiminde iç denetimin rolü teorik çerçevede ele alınmaktadır. Bu anlamda çalışmada öncelikle hile kavramından bahsedilerek hile türleri, hile unsurları, hile riski ve hile riski yönetimi kavramları detaylı şekilde açıklanmaktadır. Ardından iç denetim kavramı ve iç denetim biriminin işletmelerdeki görev ve sorumluluklarına değinilmektedir. Son olarak özellikle hile riski yönetiminde iç denetimin rolü ve artan öneminin altı çizilmektedir.

1. HİLE KAVRAMI

Hile kavramının genel kabul gören tek bir tanımını yapmak oldukça güçtür. Çeşitli kaynaklarda hile kavramı farklı ifadelerle tanımlanmıştır.

Türk Dil Kurumu (TDK), hile kavramını "*Birini aldatmak, yanıltmak için yapılan düzen, dolap, oyun, ayak oyunu, alavere dalavere, desise, entrika*" olarak ifade etmiştir. Yine TDK tarafından yapılan ikinci tanım ise

ÇİN, ABD VE AB TİCARET POLİTİKALARINDA JEOEKONOMİ TARTIŞMALARI VE YARI İLETKEN ENDÜSTRİSİNİN DURUMU

Gülçin Elif YÜCEL[1]

1 Dr. Öğr. Üyesi, Beykent Üniversitesi-İİBF, Uluslararası Ticaret ve Finansman Bölümü, ORCID: 0000-0002-5830-7588

GİRİŞ

Yarı iletkenler, dünyanın giderek daha fazla bağımlı hâle geldiği ve sürekli artan bir oranda büyümeye devam eden kritik bir üründür. Yarı iletkenler, dijital ekonominin en önemli girdisidir. Savunma sanayi, otomobil, tüketici elektroniği ve elektrik altyapısı yarı iletken tedarik zincirine bağlıdır. Tüm bunlar, dijital dünyanın siber savaş ve yapay zekâ biçimindeki hızlı güvenlik sağlama sorununa ek olarak, yarı iletkenlere bağlıdır (Ernst, 2022). Kısacası yarı iletkenler, iletişim, bilgi işlem, sağlık, askeri sistemler, ulaşım, temiz enerji ve sayısız başka uygulamada ilerleme sağlayan elektronik cihazların temel bir bileşenidir. Yarı iletken endüstrisi, yayılmaya devam ederek, dünyanın her yerindeki insanların yaşamlarını zenginleştirmektedir. Serbest ticaretin, küresel büyüme ve gelişmenin birincil motorudur.

Ülkeler birbiriyle bölgesel rekabet yaratmaya devam ettikçe, ticaret politikasının siyasetle ilişkisi daha belirgin hâle gelmektedir. Uluslararası politik ekonomi literatürü, öncelikle iç politik faktörlere odaklanarak uluslararası ticaret politikası sonuçlarını açıklamaya çalışmaktadır. Son on yılda, Çin, ABD ve AB, yarı iletken kaynaklarının yerelleştirilmesine öncelik veren politikalar ve yasalar çıkarmıştır. Değer zincirlerinin küreselleşmesi, 20. yüzyılın sonlarında serbest ticaret üzerine kurulu neo-liberal ekonomik düzen tarafından yönlendirilen coğrafi uzmanlaşma ile açıklanabilir. Yarı iletken endüstrisinin mevcut küreselleşmeden ayrılması, başlangıçtaki konumuyla zıtlık oluşturmaktadır. Bunun nedeni, sürecin tamamen jeopolitik çıkarlar ve ulusal güvenlikle motive olan hükümetler tarafından yönlendirilmesidir.

Günümüzde yarı iletkenlerin arz güvenliği birçok ülke için bir öncelik hâline gelmiştir. Bununla birlikte, teknolojinin artan güvenlik sorunu, büyük yarı iletken pazarlarının hükümetlerini, tüketicilerini ve üreticilerini ekonomik karşılıklı bağımlılıkla ilişkili ulusal güvenlik tehditlerini dikkate almaya yönlendirmiştir. Bu nedenle devletler, yerli üreticilerin finansmanı ve sübvansiyonu, doğrudan yabancı yatırımın (DYY) teşvik edilmesi, ticaret engelleri ve gelen DYY üzerindeki kısıtlamalar gibi korumacı önlemler ile yarı iletken tedarik kaynaklarını küresellikten arındırmak amacıyla birtakım inisiyatifler almışlardır.

Bu çalışma, ekonomik karşılıklı bağımlılığın politik ekonomi tartışmalarındaki önemini incelemektedir. Çalışmada şu soruya yanıt aranmaktadır: Ülkeler ve ticaret blokları neden yarı iletken üretimin yerelleştirilmesine öncelik vermektedir ve jeoekonomik teori bunu açıklamaya nasıl yardımcı olabilir? Ayrıca, büyük güçler olan Çin, ABD ve AB'nin korumacı eylemlerinin, ekonominin artan güvenlik önlemlerinin bir sonucu olduğunu yarı iletken endüstrisi temel alınarak tartışmak amaçlan-

NFT (NON-FUNGIBLE TOKEN) ÖZELİNDE KRİPTO VARLIKLARIN VERGİLENDİRİLMESİ

İskender Emrah KARAKAŞ[1]

1 Arş. Gör. Ankara Hacı Bayram Veli Üniversitesi İktisadi ve İdari Bilimler Fakültesi Maliye Bölümü, Orcid Numarası: 0000-0001-6685-1965

1. Giriş

Bitcoin ağı ve bu ağın kripto para birimi Bitcoin'in 2009 yılında kullanılmaya başlaması ile günümüze kadar kripto varlık teknolojisinde bir hayli ilerleme kaydedilmiş ve coin, alt coin, Metaverse, NFT gibi kavramlar günlük hayatta sıklıkla kullanılır hale gelmiştir. 2015 yılında kullanılmaya başlanan Ethereum ağı ve gelişen teknolojiler ile kripto para birimleri çeşitlenmiş, kripto varlıklar her geçen gün farklı alanlarda kendini gösterir olmuştur. Küresel kripto para piyasası büyüklüğü 1,17 trilyon dolar seviyelerine ulaşmış olup (Coingecko), Metaverse'in 2029 yılında kadar 1,5 milyar dolar değerine ulaşması, küresel AR/VR/MR[1] pazarının 2028 yılına kadar 250 milyar dolara ulaşması beklenmektedir (Influencermarketinghub, 2023).

Yaratılan ekonomik büyüklük, bireyleri ve şirketleri bu alanlara yatırım yapmaya teşvik etmektedir. Devletlerin, teknolojik gelişmeler karşısında harekete geçerek vergilendirme ile ilgili çalışma yapmaları bu gelişmelere nazaran yavaş olmaktadır. Aynı durum vergilendirme alanında da kendisini göstermektedir. Bu alanda pek çok akademik çalışma ve araştırma yapılmış ve yapılıyor olsa da vergilendirme konusunda yasal olarak adım atmış herhangi bir ülke bulunmamaktadır. Kripto para birimleri ile ilgili OECD, Avrupa Birliği ve benzer kurumların rapor ve tavsiye raporları yayınlanmış olsa da bunlar tavsiye niteliğinden öteye geçememiştir. Ayrıca bazı ülkeler kripto para birimleri ile ilgili tanımlama ve mevcut yasalar çerçevesinde vergilendirme yapıyor olsalar da kripto varlıkları da içine alan yasal düzenlemeler bulunmamaktadır. Türkiye'de hem kripto paraların hem de kripto varlıkların vergilendirilmesi ile ilgili yasal düzenleme bulunmamaktadır.

Çalışmanın ilk bölümünde blockchain, metaverse ve NFT (Non-fungible Token) kavramları açıklanacaktır. Bu kavramlar birbirleri ile iç içe geçmiş kavramlar olduklarından ve vergilendirme ile ilgili ülke uygulamaları kripto para birimleri ağırlıklı olduğu için ikinci bölümde kripto para birimlerinin vergilendirilmesinde ülke uygulamalarına yer verilecektir. Ayrıca bu bölümde NFT'lerin vergilendirilmesi ile ilgili konulara da yer verilecektir. Çalışmanın son bölümünde ise Türkiye'de kripto para birimleri ve kripto varlıkların vergi yasaları karşısındaki durumları ele alınıp, yapılabilecek muhtemel düzenlemelere değinilecektir.

2. BLOCKCHAIN, METAVERSE VE NFT KAVRAMLARI

NFT kavramının tanımlamasını yapmadan önce blok zincirin (blockchain) tanımlamasının yapılması gerekmektedir çünkü NFT'ler blok zincirin bir parçasıdır. Blok zincir, bir ağdaki çeşitli taraflar arasında gerçek-

BÖLÜM 15

İŞLETME STOKLARINDA YAPILAN HİLELER VE ÇÖZÜM ÖNERİLERİ

Sulhi ESKİ[1]

1 Dr.Öğr.Üyesi, İstanbul Gelişim Üniversitesi, UBF Lojistik Yönetimi Bölümü, seski@gelisim.edu.tr. ORCİD ID: https://orcid.org/0000-0003-0879-0089

1.GİRİŞ

Finansal tablolar, bir işletmenin belli bir zamanda veya belli bir süre boyunca finansal faaliyetlerinin sonuçlarını gösteren resmi belgelerdir. Finansal tablolar tüm paydaşlara ihtiyaç duydukları bilgileri gerçeğe uygun ve şeffaf olarak sunmalıdırlar. Özellikle işletme yatırımcılarının güvenli yatırım yapabilmeleri için finansal tabloların şeffaf olarak sunulması çok önemlidir. Muhasebe sistemi ve standartlarına göre isimleri ve şekilleri değişse de bilanço, gelir tablosu ve nakit akış tablosu temel finansal tablolar olarak öne çıkmaktadır. Finansal tablolar belli zamanlarda zorunlu ve/veya isteğe bağlı olarak yayınlanır. Bir işletmenin yatırım için uygunluğunun tespit edilmesi için başta bilançolarının, gelir ve nakit akış tablolarının anlamlı bir şekilde analiz edilerek yorumlanması gerekir.

İşletmede finansal tabloların hazırlanması sorumluğu yönetimsel bir sorumluluktur. Finansal tabloların gerçeğe uygun, şeffaf ve doğru bir şekilde sunulması gerekirken bazı menfaatler ve gözetilerek yanıltıcı bir şekilde sunulabilmektedir. Yanıltıcı finansal tabloların sunulmasının nedenleri işletme içi araştırmalar, iç ve dış denetim yoluyla çoğunlukla tespit edilebilmektedir. Finansal tablolarla yanıltıcı bilgiler sunulması öncelikle işletmenin gelecekteki faaliyetlerine ve ulaşmak istedikleri hedeflerine büyük bir zarar vermektedir.

Finansal tabloların yanıltıcı olarak sunulması hatadan veya kasıtlı olarak yapılan hileden kaynaklanabilir. Hile unsuru ile kişileri yanıltarak menfaat sağlamak dolandırıcılık olarak ifade edilmektedir. Hile, kuruluş ve kişilerin iyi niyet ve güvenini sarsarak onların yanlış işlem yapmalarına sebebiyet verir. İşletmelerdeki büyümelere paralel olarak muhasebe işlemlerinin daha yoğun ve karmaşık bir hal alması ve insan ilişkilerinde menfaate yoğunlaşılması hile vakalarının artışına zemin hazırlamıştır.

Finansal tablolar işletmede gerçekleşen parasal faaliyetleri bir hesap düzeni çerçevesinde sunmaktadırlar. Nakit varlıklar, alacaklar, stoklar, duran varlıklar, borçlar ve sermaye başlıkları altında gruplandırılan hesaplar farklı parasal faaliyetleri ifade etmektedirler. Stoklar üretime girecek hammadde stokları ile üretilen satışa hazır mal stoklarını ifade etmektedir. İşletmelerde önemli bir büyüklüğü temsil eden stokların finansal tablolarda gerçeğe uygun sunulmaması işletme paydaşlarını yanıltacaktır. Muhasebe hileleri, finansal sistemin istikrarı için önemli bir tehdittir. Çünkü işletmelerin iflaslarına neden olabilir, piyasaya ve düzenleyici otoritelere olan güveni azaltabilir. Bu nedenle; işletmeler hileyi tespit etmenin ötesinde hileciyi önleyici tedbirler almak zorundadırlar.

Çalışmanın amacı, işletmede stok hilelerinin nedenlerini, işaretlerini ve alınması gereken önlemleri belirlemektir. Stok hilelerinin finansal tablolardaki hilelerin bir yansıması olması nedeniyle stok hileleri konusu fi-

SÜRDÜRÜLEBİLİRLİK AÇISINDAN B CORP SERTİFİKALI MUHASEBE-DENETİM ŞİRKETLERİNİN İNCELENMESİ

Kürşad ÇAVUŞOĞLU[1]

1 Öğr. Gör. Dr., Mersin Üniversitesi, Anamur Meslek Yüksekokulu, İşletme Yönetimi Programı, kursatcavusoglu@mersin.edu.tr, ORCID ID: 0000-0002-6820-3790

1. GİRİŞ

Endüstriyel ve ticari aktivitelerin negatif çevresel etkileri, endüstriyel ve küresel nüfus büyüklüğünün ekonomik ve sosyal etkileri, işletme operasyonlarının küreselleşmesi ile finansal hilelerin ortaya çıkmasının kamu tarafından şirketlerin dikkatle incelenmesine neden olması, şirketler üzerinde kamunun yeniden güvenini kazanmak için baskının artması sürdürülebilirliği işletme eylemlerine dâhil etmiştir (White, 2009: 5). Sürdürülebilirlik genel olarak bir sistemin kaynaklarını yenileyerek ya da sorumlu kullanarak bir sistemin varlığını sürdürmesini amaçlayan bir çalışma prensibidir (Horváth, 2017: 2). Sürdürülebilirlik bir toplumun yeniden üretebileceğinden daha fazla kaynağı kullanmaması gerektiğini ifade eder (Aras ve Crowther, 2009: 280). Kurumsal sürdürülebilirlik paydaşlarla karşılıklı etkileşim ile işletme faaliyetlerine sosyal ve çevresel kaygıların dâhil edildiğini gösteren şirket faaliyetlerini ifade eder (Van Marrewijk, 2003: 102). Kurumsal sürdürülebilirlikte örgütün ekonomik, çevresel ve sosyal etkilerine uzun dönemli odaklanma söz konusudur (White, 2009: 5). Sürdürülebilirlik örgütleri ekonomiyi, çevreyi ve toplumu eş zamanlı olarak geliştiren kararlar almaya davet eder (Hitchcock ve Willard, 2006: 3).

Çeşitli paydaşların farklı taleplerini karşılamada örgütlerin yararlandığı önemli araçlardan biri sürdürülebilirlik raporlamasıdır (Hahn ve Kühnen, 2013: 5). Sürdürülebilirlik raporları finansal raporlardan daha farklı türde bilgi sağlamakta olup, firmanın ekonomik, sosyal, çevresel performansını dikkate alarak uzun dönemli değer yaratma yeteneğini gösterir (Kuzey ve Uyar, 2017: 28). Sürdürülebilirlik raporlamasının tarihsel gelişimine bakıldığında dört aşama görülmekte olup, 1950'lerdeki ilk aşamada kurumsal sosyal sorumluluk tanımlanmıştır ve sosyal boyuta odaklanılmıştır (Buallay, 2022: 43). 1980'lerdeki ikinci aşamada odak çevresel konulara yönelmiştir (Buallay, 2022: 43; Hahn ve Kühnen, 2013: 5). 1990'lardaki üçüncü aşamada ekonomik, çevresel ve sosyal boyutları içeren (tek başına, ayrı, bağımsız bir rapor olarak) sürdürülebilirlik raporlaması odak noktasında yer almıştır (Buallay, 2022: 43). 2010'lardaki dördüncü aşamada ise ekonomik, çevresel, sosyal ve yönetişim bilgilerini bir araya getiren entegre raporlama ön plana çıkmaya başlamıştır (Buallay, 2022: 43).

Siew (2015: 181-182) kurumsal sürdürülebilirlik raporlaması araçlarını ilkeleri, inisiyatifleri, kılavuz bilgilerini sağlayan (örneğin Global Reporting Initiative (GRI)) çerçeve, daha resmi bir belgelendirmeyi (örneğin ISO 14001) ifade eden standartlar ile şirketin sürdürülebilirlik performansının üçüncü taraflar tarafından değerlendirildiği (örneğin Asian Sustainability Rating (ASR)) derecelendirme ve endeksler olmak üzere üç ana başlık altında toplamıştır. B Corp sertifikası da bunlara ek olarak kurumsal sürdürülebilirlik raporlaması aracı olarak düşünülebilir.

GİRİŞ

Bireylerin hayatında ulaşmayı hedefledikleri nihai amaç olarak tanımlanan "mutluluk" günümüzde psikoloji ve sosyoloji bilim dallarının yanında artık iktisadın da ilgilendiği konulardan biri haline gelmiştir. Özellikle büyüme, enflasyon, işsizlik ve kurumsal değişkenler gibi göstergeler ile mutluluk arasındaki ilişki incelenmeye başlanmış ve bu ilişki öznel iyi oluşu etkiler mi ya da hangi politikalar ile daha yüksek bir iyi oluş seviyesine ulaşılabilir şeklindeki sorularla hem ampirik hem de literatür çalışmalar yapılmaya başlanmıştır (Veenhoven ve Dumludağ, 2015:46).

İnsanlığın refahının ekonomik gelişmişliğin yanı sıra daha iyi bir refah seviyesine de ulaşabilmesi amacıyla uluslararası alanda mutluluk ve mutluluk endeksleri üzerine oldukça fazla çalışmalar yapılmaktadır. Mutlu Gezegen Endeksi (HPI), Dünya Mutluluk Endeksi, Gayrisafi Ulusal Mutluluk Endeksi (GNH) ve Daha İyi Yaşam Endeksi (BLI) örnek endeksler arasında yer almakta ve bu endekslerden elde edilen veriler birçok akademik çalışmaya kaynak sağlamaktadır.

Dünyadaki mutluluk ve yaşam memnuniyetini ölçen araştırmalar ve yayınlanan raporların yanında Türkiye'de de TÜİK tarafından 2003 yılından itibaren "Yaşam Memnuniyeti Anketi" uygulanmakta ve sonuçları kamuoyu ile paylaşılmaktadır. TÜİK'in araştırmasında, mutluluk kavramının ekonomik, demografik, sosyal çevre, fiziksel çevre ve ülkenin durumu gibi değişkenlerle oluştuğunu açıklanmıştır. Nesnel yaşam koşulları ile öznel algıların etkisinin birlikte yer alarak, memnuniyet ve mutluluk kavramlarının iç içe geçtiğini belirtilmiştir (Şeker, 2009: 117).

BÖLÜM 18

TÜRKİYE'DE KREDİ KARTI VE BANKA KARTI KULLANIMININ SEKTÖREL İNCELEMESİ

Halil İbrahim YAVUZ[1]

1 Selçuk Üniversitesi, Taşkent MYO, Finans Bankacılık ve Sigortacılık Bölümü, h.ibrahimyavuz@selcuk.edu.tr - ORCID:0000-0003-2964-4873

1. Giriş

Plastik para olarak tabir edilen banka ve kredi kartları günümüz ekonomik yaşantısının içerisinde önemli bir yer tutmaktadır. Kartlı ödeme hizmetlerinin yaygınlaşması sayesinde insanların nakit taşıma zorunluluğu büyük ölçüde azalmış, harcamalarda bozuk para bulundurma, para üstü alma gibi sorunlar ortadan kalkmıştır. Bununla birlikte makro ekonomik açıdan, harcamaların kayıt altına alınması sağlandığı için vergi gelirlerinde de bir artışa sebep olduğu aşikardır.

Kredi kartlarının enflasyon, istihdam, kamu gelirleri, faiz oranları gibi makroekonomik değişkenler üzerinde etkileri olduğu gibi, dış ticaret, turizm gibi pek çok sektör üzerinde de etkiye sahiptir (Kaya, 2009: 94-110).

Kartları üç sınıfa ayırmak mümkündür. İlk kart türü debit kart olarak adlandırılan banka kartlarıdır. Bu kartlar bir vadesiz mevduat hesabıyla ilişkili olmalıdır. Kartla yapılabilecek işlemlerin üst limiti de hesapta bulunan bakiye kadar olmaktadır. Bu kartlar sıklıkla hesaptan para çekmek, ATM kanallarından kolay bir şekilde işlem gerçekleştirmek ve nakit taşımaksızın alışverişlerde ödeme yapabilmek amacıyla kullanılmaktadır. Bir diğer kart türü olan kredi kartları ise mülkiyeti bir bankaya ait olan ve kullanıcılarına faizsiz alışveriş kredisi limiti sunan kartlardır. Bu kartların bir kredi limiti olması nedeniyle bankaların belirleyeceği limit yasal düzenlemelere bağlıdır. Kredi kartları sıklıkla fiziki veya e-ticaret siteleri üzerinden alışveriş yaparken veya bir hizmet satın alırken kullanılmaktadır. Bunun yanı sıra bu kartlarda bankaların belirledikleri limitler çerçevesinde avans veya taksitli nakit avans kullanımı söz konusu olmaktadır. Son olarak ön ödemeli kartlardan bahsedecek olursak; bu tür kartlar bankalar veya banka dışı kuruluşlar tarafından çıkarılabilmektedir. Bu kartların özelliği ise kartın herhangi bir vadesiz hesaba bağlı olmasına gerek olmaksızın karta yüklenilen bakiye kadar kullanım limiti sunmasıdır. Bu kartlar daha çok ulaşım, fatura ödemesi, küçük çaplı online alışveriş gibi hizmetlerde kullanılmaktadır.

Bu çalışmada doğrudan bankalar tarafından çıkarılan debit kartlar ve kredi kartı kullanımının sektörel dağılımı ve harcama alışkanlıklarının değişimi vurgulanmaktadır. İlk olarak ülkemizde kartlı ödeme sistemlerinin tarihçesine kısaca yer verilecek, daha sonra kartlı ödeme sistemlerine ilişkin istatistiki bilgiler ve sektörel kullanım analizi yapılacaktır.

2. Türkiye'de Kartlı Ödeme Hizmetlerinin Kısa Tarihçesi

Bankacılık sektörü teknoloji kullanımının en yoğun olduğu sektörlerden biridir. Teknolojinin getirdiği yeniliklerden biri de şüphesiz kartlar ve bu kartların kullanıldığı kanallar ve ödeme araçları olmuştur. Ülkemizde kartlı ödeme sistemlerinin ilk örneği 1968 yılında Diners Club ve American Express'in

BİLGİYE DAYALI EKONOMİ ÜZERİNE DEĞERLENDİRME

Zeynep KARACA[1]

1 Doç. Dr., Erzurum Teknik Üniversitesi İktisadi ve İdari Bilimler Fakültesi, İktisat Bölümü, ORCID ID: 0000-0001-8046-7222

Giriş

Bilgiye dayalı ekonomi, fikirlere ve bilgiye bağlı olan bir ekonomidir. Bu ekonomide refah ve ekonomik büyümenin anahtar faktörü, üstün nitelikli bilginin sermayeleştirilmesidir. Bugün bilginin ekonomik büyümenin itici gücü olmasının sebebi verimlilik artışı ve sürdürülebilir rekabet avantajı sunabilen bir kaynak olmasıdır. Bu sebepten dolayı günümüzde bilgi ekonomisine, bilgiye, teknolojiye ve bunların ekonomik büyümedeki rolüne büyük ilgi duyulmaktadır (Tocan, 2012: 1-2). Bilgiye dayalı ekonomi ve bilgi üretiminin gelecek yüzyılda yaşam standartlarındaki büyümenin ve yeni iş yaratmanın en önemli belirleyicisi olması gerektiği şeklindeki fikir, iş dünyası, hükümet ve akademisyenlerden oldukça fazla ilgi ve destek görmektedir. Bilgiye dayalı ekonominin kökenleri, geleneksel endüstriler aşırı kapasite ve düşen kârlılık gibi acımasız sorunlarla mücadele ederken ve hükümetler balonlaşan açıklarla ve azalan reel gelirlerle boğuşurken, 1980'lerin başındaki durgunluğun derinliklerinden çıkmıştır. O zamanlar, yeni teknolojilerin ekonomik büyüme açısından büyük bir getiri sağladığına dair kesinlikle çok az kanıt vardı. Bilgiye dayalı ekonomi, o dönemde ortaya çıkan bir dizi post-endüstriyel ekonomi temasının daha iyimser ve entelektüel olarak dayanıklı bir versiyonuydu. Daha önceki post-endüstriyel temalar, büyük ölçüde akıllı makine çağının ve 1980'lerin ortalarında endüstriyel robotlar anlamına gelen çağın, istihdam ve gelir yaratma gibi sektörlerin hâkim olduğu daha da büyük bir hizmet ekonomisine yol açacağı fikrine dayanıyordu (Harris, 2001: 21- 22).

Bilgi ekonomisi geleneksel ekonomilerden bazı açılardan ayrılır:

• Ekonomi kıtlık değil, bolluktur. Kullanıldıkça tükenen çoğu kaynağın aksine, bilgi ve birikim paylaşılabilir ve aslında uygulama yoluyla büyüyebilir.

• Bilgiyle zenginleştirilmiş ürünler veya hizmetler, düşük yerleşik bilgi veya bilgi yoğunluğuna sahip karşılaştırılabilir ürünlere kıyasla fiyat ve kârlarını daha kolay yönetebilir.

• Aynı bilgi farklı zamanlarda farklı insanlar için çok farklı değerlere sahip olabilir.

• Bilgi, sistemlere veya süreçlere kilitlendiğinde, daha yüksek içsel değere sahiptir (Tocan, 2012: 2).

Silikon çip ve dijital teknolojinin potansiyeline özellikle ilgi duyan bazı gözlemciler, mükemmel akıllı makine olarak robotun ötesine bakmaya başladılar ve bu yeni teknolojinin geniş bir uygulama yelpazesine hızla girmesini not ettiler. Bu, bazı iktisatçılar arasında Schumpeterci kapitalist yaratıcı yıkım vizyonuna yönelik yenilenmiş bir coşkuya yol açtı. Büyüme sürecine ilişkin yeni bir vizyon, ABD entelektüel sınıfının ruhuna

BÖLÜM 20

İŞLETMELERİN YENİDEN ÜRETİM FALİYETİNE BAKIŞ AÇILARI

İbrahim GÜRLER[1]

1 Dr. Öğr. Üyesi, İstanbul Topkapı Üniversitesi, İktisadi, İdari ve Sosyal Bilimler Fakültesi, Uluslararası Ticaret ve İşletmecilik Bölümü, e-posta: ibrahim.gurler@topkapi.edu.tr, ORCID: 0000-0002-9755-0556

Bu çalışma Dokuz Eylül Üniversitesi Sosyal Bilimler Enstitüsü İşletme Ana Bilim Dalında yapılan "Yeniden üretim sürecinde tasarım, planlama, lojistik faaliyetlerinin incelenmesi ve Türkiye açısından değerlendirilmesi" adlı Doktora Tez Çalışmasından türetilmiş ve 10. Uluslararası Üretim Araştırmaları Sempozyumu'nda bildiri olarak sunulmuştur.

Üretici işletmeler, yaşam süresi sona ermiş olan ürünlere yeniden üretim faaliyeti ile yeni bir yaşam süresi kazandırdıklarında, bu faaliyet sonucu önemli miktarlarda maddi kazanç sağlayabileceklerini gün geçtikçe keşfetmektedirler. Yaşam süresini tamamlamış ürünler, üretim işletmeleri için eskiden herhangi bir değer ifade etmezken; bugünlerde bu ürünler üretim işletmeleri için çok değerli kaynakları oluşturmaktadırlar. Ürün geri kazanımında uygulanan yeniden üretim faaliyeti, çağımızın öne çıkan yeni iş modelleri arasına girmeyi başarmıştır.

Yeniden üretim ile daha düşük maliyetle ve daha az kaynak kullanımıyla üretimi gerçekleştirilen ürünler, tüketiciye uygun fiyatlar ile satılarak işletmelere yeni pazar olanakları sağlamışlardır. Gerçekleştirilen bu bilimsel çalışmada Türkiye'deki işletmelerin yeniden üretim faaliyetine bakış açılarını değerlendirmek amacıyla bir anket çalışması gerçekleştirilmiştir. Bugüne kadar Türkiye'de yeniden üretim faaliyetine ilişkin kapsamlı bir araştırma yapılmadığından gerçekleştirilen çalışma bir ilki oluşturmaktadır. Araştırma sonucu elde edilen veriler ışığında yeniden üretim faaliyetinin Türkiye'deki durumu incelenerek karşılanabilecek muhtemel sorunlara çözüm yolları önerilmiştir.

Yeniden üretim faaliyetinin, literatür incelendiğinde "Uyuyan Dev" olarak adlandırıldığı görülmektedir. Çünkü sahip olduğu büyük öneme rağmen henüz ekonomik olarak etkisini yavaş yavaş göstermektedir (Giuntini ve Gaudette, 2003). İlk başlarda sadece yatırım mallarında gerçekleştirilen yeniden üretim faaliyeti günümüzde gelişen üretim teknolojisi ile maliyet azaltıcı, çevreyi koruyucu ve işletme karını arttırıcı bir etken olarak artık birçok sanayi dalında uygulanabilir hale gelmiştir. Günümüzde irili ufaklı birçok farklı endüstri kolunda yeniden üretim faaliyeti gerçekleştirilmektedir.

Gerçekleştirilen bu çalışmada yaşam süresini tamamlayan ürünlerin yeniden kazanılmasını sağlayan yöntemlerden olan yeniden üretim faaliyeti ve Türkiye'deki işletmelerin yeniden üretim faaliyetine bakış açıları üzerine odaklanmıştır. Yeniden üretim faaliyeti, günümüzde diğer geri kazanım yöntemlerine göre en fazla maddi ve çevresel kazanımı sağlayan ticari anlamda kabul edilebilir bir yöntem olarak ön plana çıkmıştır (Gungor ve Gupta, 1999). Kısaca yeniden üretim faaliyeti; çevrenin korunması, hava kirliliğinin azaltılması ve atık arazilerinin daha verimli kullanılması için anahtar stratejiyi oluşturmaktadır.

YENİDEN ÜRETİM FAALİYETİ

Yaşam sürecini tamamlamış ürünleri, yeni üretilmiş orijinal ürünlerin kalitesine ve performansına çıkartma amacı yeniden üretimi diğer ürün geri kazanım stratejilerinden farklılaştırmaktadır. Yeniden üretim süreci kullanılmış ürünleri ilk üretildiklerinde sahip oldukları yeni ürün perfor-

HİZMET PAZARLAMASI BAĞLAMINDA HİZMET HATA VE TELAFİLERİNİN GÜNCEL ÖRNEKLERLE İNCELENMESİ

Filiz ASLAN ÇETİN[1]

Emel Hatice OKTAY[2]

1 Doç. Dr. Kafkas Üniversitesi, İktisadi ve İdari Bilimler Fakültesi, İşletme Bölümü, filizaslan79@gmail.com, ORCID: 0000-0002-8210-799X.

2 Doktora Öğrencisi, Kafkas Üniversitesi Sosyal Bilimler Enstitüsü, oktayemelhatice@gmail.com, ORCID: 0000-0002-5490-4457.

GİRİŞ

Dünya sürekli bir değişim ve dönüşüm içerisindedir. Bu dönüşümün en önemli parçalarından bir tanesi de dijitalleşmedir. Dijitalleşen dünya ile birlikte insanlık yaşanılan çağa ayak uydurmakta gittikçe zorlanmaya başlamıştır. Dijitalleşmenin topluma pozitif katkıları saymakla bitmezken negatif durumları da bulunmaktadır. Dijitalleşmenin bir getirisi de bilgiye ulaşma hızında oluşan artıştır. Bilgiye ulaşma hızının artışı bazı durumlarda pozitif bir durum olarak nitelendirilse de bazı durumlarda negatif bir durum olarak da nitelendirilebilir. Bu bağlamda bilgiye ulaşma hızı tüketiciler ve müşteriler açısından bakıldığında istedikleri ürünün karşılaştırılmasını yapabilme ve daha fazla ürüne ulaşma imkânı tanırken, markalar ve şirketler açısından ise daha fazla kitleye ulaşma imkânı sağlayabilmektedir.

İnsanlarda tepkilerini çeşitli iletişim araçları ile başka insanlara yayabilmektedirler. Fakat insanlar dijitalleşme ile birlikte daha fazla kitleye ulaşma imkânı da bulmuştur. İnsanlar çeşitli sosyal medya platformları aracılığı ile hem markaları olumsuz duygu ve düşüncelerinden haberdar ederken bir taraftan da başka insanlara ulaşarak tepkilerini topluma da kolaylıkla yayabilmektedir. Örneğin marka ya da şirketlerin yaptıkları her hangi bir hata veya kötü olarak nitelendirilecek bir olayında insanlara ulaşma hızı da bu durumla birlikte artış gösterecektir. Meydana gelen hataların da dijitalleşen dünya ile birlikte telafi süreci de hız kazanmaktadır.

Bu çalışmada hizmet hata ve telafilerine yönelik teorik çerçevenin açıklanması hedeflenmektedir. Çalışmanın ilerleyen bölümlerinde markaların ve şirketlerin başlarına gelen hizmet hata ve telafilerine yönelik güncel örneklerden bahsedilmektedir. Çalışmanın en son bölümünde ise şirketler meydana gelen hatalarını düzeltmek amacıyla nasıl telafi yöntemi uyguladıkları bahsedilmektedir.

HİZMET PAZARLAMASI

Hizmet pazarlaması kavramından bahsetmeden önce pazarlama kavramının ve hizmet kavramının tanımını bilmek önem arz etmektedir. Bu bağlamda pazarlama, insanların ihtiyaç ve isteklerini karşılamaya yarayan bir değişim işlemi olarak tanımlanmaktadır (Bozkurt, 2008). Hizmet kavramının tanımlanması ise oldukça zor ve karmaşıktır (Jareankieatbovorn, 2018). Bu sebeple hizmet kavramının çeşitli tanımları bulunmaktadır. Hizmet kavramı ilk olarak Sasser, Olsen ve Wyckoff (1978), tarafından müşterilere sunulan açık ve kapalı hizmetlerle, kolaylaştırıcı hizmetler olarak tanımlarken, Gronroos (2000) ise müşterilerin, hizmet sağlayıcılarının veya fiziksel kaynakların etkileşimi ile oluşturulmuş somut ve soyut faaliyetlerden oluşan bir süreç olarak tanımlamaktadır (Jareankieatbovorn, 2018).

KARBON MUHASEBESİ VE ŞİRKETLERİN SÜRDÜRÜLEBİLİRLİK RAPORLARI İÇERİK ANALİZİ

Seyhan ÖZTÜRK[1]

Osman Nuri AKARSU[2]

1 Doç. Dr., Kafkas Üniversitesi, İktisadi ve İdari Bilimler Fakültesi, İşletme Bölümü, seyhan87ozturk@gmail.com, ORCID: 0000-0003-1458-840X

Giriş

Küresel ısınma, ekolojik çevreyi ve insanlığı tehdit eden evrensel bir sorun haline gelmiştir. İnsan faaliyetlerinin; küresel ısınma seviyesini, bir yılda 1,5 ° C'ye ulaşabilecek olan sanayi öncesi seviyelerden yaklaşık 2030, 2052 ° C'ye çıkardığı tahmin edilmektedir. Buna ek olarak, artan küresel sıcaklıkların neden olduğu deniz seviyesinin yükselmesi, aşırı hava olayları ve buzulların geri çekilmesi gibi olaylar dünya çapında endişeleri arttırmaktadır. Enerji kullanımından kaynaklanan antropojenik karbon emisyonlarının, küresel ısınmanın önemli bir itici gücü olduğu kabul edilmektedir. Hızlı sanayileşme ve kentleşme ile birlikte, enerji arzı nedeniyle çeşitli sanayi sektörleri tarafından tüketilen büyük miktarda enerji, antropojenik karbon emisyonlarına önemli bir katkıda bulunmaktadır (Tong vd., 2023).

2011'den sonra, iklim değişiklikleri ve çevre sorunları, ülkeleri karbon emisyonlarını kontrol etmek için uygulamalarda bulunmaya ve giderek daha fazla ülkenin karbon azaltımına odaklanmasına neden olmuştur. Uzun bir süredir, ekonomik büyüme ihtiyacı ile karbon azaltma ihtiyacı arasındaki çelişkinin, kilit bir yaklaşım olan düşük karbonlu büyüme yoluyla çözülebileceği kabul edilmektedir. Ekonominin sürekli gelişmesiyle birlikte ülkelerin sanayi yapıları da devamlı olarak değişmektedir (Jiang & Sun, 2023).

Küresel iklim değişikliğinin yaygın etkileri nedeniyle, karbon emisyonu izlemesi son yıllarda akademik topluluktan büyük ilgi görmektedir. İzlenen karbon emisyonlarının hacmi, karbon muhasebesi ilkelerine bağlı iken, karbon emisyonu izleme teknolojisinin seçimi, izleme hedeflerinin ve uygulama senaryolarının gerçek ihtiyaçlarına dayanmaktadır. Karbon emisyonu muhasebesinin üretici sorumluluğu ilkesi, tüketici sorumluluğu ilkesi ve kapsamlı sorumluluk ilkesi olmak üzere üç ana ilkesi vardır. Üretici sorumluluğu ilkesi, yalnızca bir bölgenin toprak sınırları içinde yayılan karbon emisyonlarının sayılacağını belirtmektedir. Tüketici sorumluluğu ilkesi, emisyonun nihai mal ve hizmetlerin tüketimine göre hesaplandığı anlamına gelir ve bu popüler muhasebe ilkesi, ikili ticaret ve çok bölgeli girdi-çıktı yöntemlerinde somutlaşan emisyonları içermektedir. Kapsamlı sorumluluk ilkesi kapsamında emisyon muhasebesi ise, karbon emisyonlarının üreticiler ve tüketiciler arasında makul bir şekilde tahsis edilmesini ifade etmektedir (Chen vd., 2023).

Sera gazı emisyonlarının küresel doğası ve artan iklim değişikliği etkileri, iklim değişikliğinin olumsuz etkilerini önlemek ve azaltmak için yeni, daha bütünsel yaklaşımlar gerektiren bir olgudur. Bu durum yeni bilgilere ihtiyaç duymayı, yeni yöntemler geliştirmeyi gerektirmektedir. Dolayısıyla yeni duyulmaya ve çalışılmaya başlanan karbon muhasebe-

UZAKTAN ÇALIŞMANIN GELECEĞİ: ENGELLİLER İÇİN KALICI BİR UYGULAMA OLABİLİR Mİ?

Aykut AYDIN[1]

1 Dr. Öğr. Üyesi, Kırklareli Üniversitesi, İktisadi ve İdari Bilimler Fakültesi, Çalışma Ekonomisi ve Endüstri İlişkileri Bölümü, ORCID: 0000-0003-2834-1416.

Giriş

Uzaktan çalışma, esnek çalışma türlerinden birisi olarak, son dönemlerde ismini sıklıkla duyduğumuz bir çalışma biçimidir. COVID-19 pandemisi, öncesinde zaten mevcut olan uzaktan çalışmanın görünürlüğünü artıran belki de en önemli faktör olmuştur. Pandemiyle birlikte uzaktan çalışma biçimi zorunlu da olsa son derece yaygınlaşmıştır. Engellilerin, istihdam piyasasındaki dezavantajlı durumları birçok nedenden ileri gelmektedir. En önemli nedenlerden birisi fiziksel hareket kabiliyetlerindeki zayıflıktır. Uzaktan çalışma, engellilerin istihdamında yeni bir dönüm noktası şeklinde kabul edilebilir. Bu kabulün ardında yatan başlıca unsurlar; erişilebilirlik, fırsat eşitliği, işgücüne katılım, damgalanmadır. Uzaktan çalışma, engelliler nezdinde tüm bu unsurların yeniden ele alınmasını sağlamıştır.

Çalışmada, önce, uzaktan çalışmanın kavramsal arka planına yer verilecek, ardından pandeminin uzaktan çalışmayı yaygınlaştırması ve bu süreçte engellilerin deneyimlerine değinilecektir. Bir diğer başlık altında uzaktan çalışmanın, engelli çalışanlar için avantajları incelenecektir. Sonrasında, uzaktan çalışmanın geleceği, uzaktan çalışmanın pandeminin ekonomik sonuçlarına yönelik geçici bir çözüm yöntemi mi, yoksa kalıcı bir çalışma şekli mi olduğu sorularına yanıtlar arayarak tartışılacaktır.

1. Kavramsal Arka Plan

Uzaktan çalışma, çalışanların teknoloji kullanımı nedeniyle kuruluş dışında iş görevlerini takip edebildiği bir çalışma modelini ifade etmektedir (Ferrara vd., 2022: 1). Bu model, özellikle son yaşadığımız pandeminin neden olduğu kısıtlamalar sonucunda yaygın biçimde tatbik edilmeye ve tartışılmaya başlanmıştır.

Pandeminin başlangıcında, dünyanın dört bir yanındaki hükümetler virüsün bulaşmasını azaltmak için ulusal kısıtlamalar getirmiş ve insanlara mümkün olduğunca evden çalışmalarını tavsiye etmiştir. Birçok kuruluş ilk kez uzaktan çalışmaya zorlanmış ve ofis tabanlı çalışanlarının evden çalışmasını zorunlu hale getirmiştir. Neredeyse bir gecede işverenler, masa başı çalışanlarının evden çalışmasına izin veren altyapı, politikalar ve prosedürler oluşturmak zorunda kalmıştır. Bir zamanlar yöneticiler için bir "ayrıcalık" olarak görülen evden çalışma, çoğu ofis çalışanı için zorunlu hale gelmiştir (Holland, 2021: 166).

COVID-19 salgını, 2020 boyunca, çalışanların % 50'sinden fazlasının uzaktan çalışmasıyla evden çalışan insan sayısını önemli ölçüde artırmıştır. Uzaktan çalışmanın mevcut popülerliği, yüksek hızlı internet, video konferans teknolojisi, uzaktan iş birliğinin yaygınlığı ve gelişen diğer teknolojiler aracılığıyla giderek daha da yaygınlaşmıştır (Orr ve Savage, 2021).

ZİHNİYET - İDEOLOJİ KARMAŞASINDA DOĞU İKTİSADININ İMKÂNI

Görkem BAHTİYAR[1*]

1 Dr. Öğr. Üyesi, Bursa Uludağ Üniversitesi, İ.İ.B.F. İktisat Bölümü, Görükle Kampüsü 16059 Nilüfer/BURSA,TÜRKİYE. e-posta: gorkbaht@uludag.edu.tr, ORCID ID: https://orcid.org/0000-0002-5092-6819

Giriş: Zihniyet Kavramı Üzerine

İktisat bilimi, 18. yüzyıldaki doğumundan beri kendi içerisinde çok farklı alt kollara ayrılmıştır. Bugün iktisat biliminin metodolojik ayrışmasına bakıldığında, Ana akım iktisat dışında çok çeşitli alternatif okulların bulunduğu bir yapı görülmektedir. Bir toplum bilimi olarak iktisadi düşünce dünyası çok çeşitli alt türlerin barınabildiği bir çevreyi ifade eder. Ancak neredeyse bütün iktisat okullarının ortak olan bir özelliği vardır ki o da Batı kaynaklı olmalarıdır. Batı iktisadının, özellikle de onun ana akım kolunun, belirli ölçüde kapitalist zihniyetin etkisi altında geliştiği söylenebilir. Birincisi, batı iktisadı (sosyalist varyantı da dâhil), sermaye birikimini analizinin merkezine koymaktadır. İkincisi ise ana akım iktisatta en çok göze çarpan, ekonomik hayatı hesaplama ve modern tekniklerin de gelişmesi ile kodlama çabasıdır. Örneğin larak da iki ayrı uçta bulunan Ana akım ve Marksist iktisat dahi, temelde Batı kaynaklıdır ve ikisi de sermaye birikimini analizin merkezine alır. Batı iktisadının gelişim sürecinde gözlemlenebilecek bir diğer unsur da dünyevileşmedir. Batı iktisadının dünyevi bir bilim olma iddiası ironik bir biçimde onu dünyevi gerçeklikten bile uzaklaştırmıştır. Batı iktisadı üzerine verilen bu özet inceleme, aslında iktisat bilimine katkı yapma imkânının hala var olduğunu göstermektedir. Dolayısıyla Doğu'dan çıkacak bir iktisat okulunun da varlığını sürdürebileceği alan mevcuttur. Ancak, Osmanlı ile başlayan Batılılaşma süreci, orijinal bir doğu iktisat ilminin üretilmesi ile sonuçlanamamıştır. Bu çalışma, İktisadi düşünce dünyasının bu yapısı karşısında, Türk ve İslam dünyası için geçerli olan temel bir soru(n) üzerine gitmektedir. Bu sorun, Doğu'nun kendine has bir iktisat okulu kuramamış olmasıdır. Çalışmada, zihniyet ve özellikle Doğu'da Batı zihniyetinin ideoloji haline getirilmesinin bu durumdaki payı üzerinde durulmakta ve bir Doğu iktisadı alternatifinin imkânı üzerinde tartışılmaktadır.

İktisat zihniyeti iktisadi alanın ve o alana ait olanların nasıl algılanacağı ve nasıl değerlendirileceği ile ilgilidir. İktisat zihniyeti iktisadi dünyayı anlama ve anlamlandırma biçimi olarak da düşünülebilir. Kavram, aynı zamanda iktisadi alanın nasıl yönetileceği ile de ilgilidir. Örneğin, kimi için faiz verimli bir geçim kaynağı olarak; kimi için ise kaçınılması gereken bir şer olarak görülebilecektir. Buradan da iktisat yöntemi ile ilgili önemli sayılabilecek bir sonuç çıkarılabilir. O da evrensel bir iktisat biliminden henüz insanlığın şu aşamasında bahsetmenin güç oluşudur. İktisadi zihniyet toplumdan topluma farklılık göstereceğinden sosyal bilim de farklılık gösterecektir (Sombart,2004). Çünkü her toplum iktisadi dünyayı farklı görecektir. Şu anda iktisattaki farklılaşmanın sadece batı entelektüel dünyasının kendi sınırları içinde ortaya çıktığı görülmektedir. Doğuda bunlara alternatif olabilecek bir iktisadın ortaya çıkmamış olması, o bölgenin hala Batı zihniyetinin hegemonyasını- maalesef gönüllü ola-

1. GİRİŞ

2018 yılı istatistiklerine göre dünya nüfusunun %55,3'ü şehirlerde yaşamaktadır (Dengiz ve Özaslan, 2019, s. 55). Bu oranın 2050 yılında %70'e ulaşacağı tahmin edilmektedir (Lambert vd., 2015 s. 108). Birleşmiş Milletler Dünya Turizm Örgütü, 2019 yılında uluslararası arenadaki turist sayısının 1,5 milyara ulaştığını açıklamıştır (UNWTO, 2020). Uluslararası Yatırımcılar Derneği tarafından açıklanan istatistiklere göre ise; uluslararası doğrudan yatırım akışları 2014 yılında 1,34 trilyon dolar, 2015'te 1,92 trilyon dolar, 2016'da 1,87 trilyon dolar, 2017 yılında ise 1,43 trilyon dolar olmuştur (YASED, 2018). Dünyadaki şehirleşme, turizm ve yatırım oranlarının her geçen gün artması, bu durumdan daha fazla kazanç elde ederek refah seviyelerini artırmak isteyen şehirlerin; birbirleri ile olan rekabet durumlarının artmasına ve bu amaçla bir takım pazarlama çalışmalarına yönelmelerine neden olmaktadır. Bu nedenle şehirlerdeki karar alıcılar; şehir pazarlaması çalışmaları ile şehirlerine daha fazla turist, yatırımcı, girişimci, yeni yerleşimci çekmeye ve şehirde yaşayanların memnuniyetlerini artırmaya çalışmakta (Karmowska, 2002, s. 139) ve bu amaçla şehirlerini diğer şehirlerden farklılaştırmak için stratejiler geliştirmektedirler (Kavaratzis ve Ashworth, 2008, s. 506).

Şehir pazarlaması çalışmalarından başarı elde edilebilmesi; şehrin pazarlama hedeflerine uygun olarak kapsamlı bir şekilde hazırlanan stratejik pazarlama planına bağlıdır (Hawes vd., 1991, s. 11). Stratejik pazarlama planında şehrin potansiyel hedef kitleleri ile şehirde yaşayanların istek ve ihtiyaçları belirlenmeli, şehrin eksik ve farklı yönleri ortaya konularak devamında hedef kitleleri gruplandırma, pazar bölümleme ve şehri farklılaştırma gibi stratejiler oluşturulmalıdır. Sonraki süreçte ise pazarlama karması planlanmalı ve tutundurmaya yönelik iletişim stratejilerine karar verilmelidir (Apaydın, 2014, s. 9-11). Deffner ve Liouris (2005, s. 2-3) şehrin imajının bazı durumlarda ziyaretçiler, yatırımcılar ve şehir sakinlerinin görüşlerini şekillendirmede şehrin mevcut durumundan daha fazla rol oynadığını söylemekte, pazarlama anlayışına göre bir ürün olan şehrin imajıyla birlikte pazarlanması gerektiğini ifade etmektedir. Kotler ve Armstrong, halkla ilişkilerin şehirler için önemli bir iletişim yöntemi olduğunu söylerken (Peltekoğlu, 2018, s.2), şehir pazarlamasında halkla ilişkilerden şehir hakkında olumlu imaj geliştirmek ve şehri geniş kitlelere tanıtmak için yararlanılmaktadır (Apaydın, 2014, s. 88). Koçak (2015) araştırmasında, şehir ve ülke pazarlamasında halkla ilişkilerin önemini bildirmektedir. Ancak, şehir pazarlamasında halkla ilişkilerle birlikte diğer tutundurma çalışmalarının başarıya ulaşabilmesi için öncelikle şehrin pazarlama hedeflerinin ve stratejilerinin belirlendiği stratejik pazarlama planı oluşturulmalı ve bunun sonucunda tutundurma karması planlanıp hayata geçirilmelidir (Altunbaş, 2007, s. 167).

BALKAN ÜLKELERİ VE TÜRKİYE'NİN CRITIC-RAFSI YÖNTEMİ İLE EKONOMİK PERFORMANSLARININ DEĞERLENDİRİLMESİ

Yusuf KAHREMAN[1]

1 Dr. Öğr. Görevlisi, Sivas Cumhuriyet Üniversitesi, Zara Veysel Dursun Uygulamalı Bilimler Meslek Yüksekokulu, Bankacılık ve Finans Bölümü, ykahreman@cumhuriyet.edu.tr, ORCID ID: 0000-0001-5968-5081

1. GİRİŞ

Gayri Safi Yurtiçi Hâsıla (GSYH) üzerindeki değişim, bir ülkenin performansı veya ekonomik anlamdaki gelişimi hakkında bilgi sunmaktadır. Ülkelerin ekonomik performanslarının artmasını GSYH'nin büyümesi ve kişi başı GSYH'nin artması olarak ele alan birçok görüş olsa da bu değişkenler bir ülkenin ekonomik performansının net bir şekilde ölçülmesi için tek başına yeterli değildir. Bir ülkede enflasyonun yüksek olması veya işsizlik seviyesinin yüksek olması durumunda GSYH tek başına ülkenin ekonomik performansını açıklamak için yetersiz kalacaktır. Bu sebeple ülkelerin ekonomik performanslarını ele alırken GSYH göstergesi dışında kalan makro göstergelerinde ele alınması gerekmektedir (Belke, 2009).

Sihirli elmas yaklaşımının yanı sıra küreselleşmenin de etkisiyle sınırların yavaş yavaş ortadan kalkması makroekonomik performans ölçümü gerçekleştirilirken dış ticaret göstergelerini de bu kapsamda kullanılabileceğini göstermektedir. Makroekonomik performans üzerine yapılan çalışmalar incelendiğinde büyüme oranı, işsizlik ve enflasyon gibi temel makro göstergelerin yanı sıra bu makro değişkenlerden elde edilen endekslerinde kullanıldığı çalışmalar görülmektedir. (Whiteley, 1986; Alvarez, vd., 1991; Cutler, vd., 1991; Alesina ve Summers, 1993; Moesen ve Cherchye, 1998; Haveman ve Schwabish, 2000; Feltenstein ve Iwata, 2005; Günsoy 2006; Kenworthy, 2006; d'Albis, vd., 2015; Wang ve Le, 2018; Ahmad ve Sheikh 2019;).

Bu doğrultuda Balkan ülkeleri ve Türkiye'nin son yıllardaki ekonomik performansının ölçülmesi amaçlanmıştır. Bu amaç doğrultusunda Balkan ülkeleri ve Türkiye'nin 2010-2021 yılları arasındaki verileri kullanılarak CRITIC ve RAFSI yöntemlerini kapsayan bütünleşik bir model ile ekonomik performans değerlendirilmesi yapılmıştır. CRITIC yöntemi ile ele alınan kriterlerin önem düzeylerinin belirlenmesi amacıyla kullanılırken, RAFSI yöntemi ile Balkan ülkeleri ve Türkiye'nin ekonomik performanslarının ölçülmesinde kullanılmıştır. Çalışmada büyüme oranı, ihracat büyüme oranı, kişi başı GSYH, net ihracat, ithalat büyüme, döviz kuru, enflasyon ve işsizlik oranları ekonomik performans değerlendirme kriteri olarak belirlenmiştir. Çalışmanın ilk kısmında ülke performansı üzerine yapılan çalışmaların literatür incelenmesi yapılmış, sonraki kısımda ise çalışmanın yöntemleri açıklanarak analiz sonuçlarına yer verilmiştir. Yapılan bu çalışma ile hem ekonomi literatürüne hem gelişmekte olan ülkelerin ekonomik performanslar değerlendirmesinin nasıl olduğuna hem de politika uygulayıcıların karar almalarına katkı sağlanması amaçlanmıştır.

SÖZLEŞMECİ DEVLETLERİN AVRUPA İNSAN HAKLARI MAHKEMESİ KARARLARINI UYGULAMA YÜKÜMLÜLÜĞÜ

Tarık SÖYLEMİŞ[1]

1 Dr. Öğr. Üyesi, Isparta Uygulamalı Bilimler Üniversitesi, Isparta Meslek Yüksekokulu, tariksoylemis@isparta.edu.tr, Orcid No: 0000-0002-1549-4766

GİRİŞ

I. ve II. Dünya Savaşlarının insan hakları üzerinde meydana getirdiği olumsuz etkileri ortadan kaldırmak ve insan haklarının uluslararası düzeyde korunmasını sağlamak amacıyla, Avrupa Konseyi üyesi ülkeler tarafından 4 Kasım 1950'de Avrupa İnsan Hakları Sözleşmesi (AİHS)[1] imzalanmıştır. Türkiye AİHS'yi 4 Kasım 1950 tarihinde imzalamıştır. AİHS ana metnine ek olarak farklı tarihlerde günümüze kadar 16 ek protokol yürürlüğe konulmuştur.

AİHS'ye ek olarak imzaya açılan protokollerden çalışmamız bakımından önemli bir tanesi, 1 Kasım 1998 tarihinde yürürlüğe konulan 11 No.lu Protokoldür.[2] Sözkonusu ek protokolle Avrupa İnsan Hakları Mahkemesi (AİHM)[3] kurularak, kişilere mahkemeye bireysel başvuru yapabilme hakkı tanınmıştır. Şüphesiz, uluslararası düzeyde insan haklarının korunmasına yönelik sadece temel hak ve özgürlüklerin düzenlenmesi uluslararası hukuk bakımından tek başına bir anlam ifade etmemektedir. AİHS ve ek protokollerde garanti altına alınan temel hak ve özgürlüklerin sözleşmeci devletler tarafından ihlal edilmesi halinde, ihlalin denetimini ve yargılamasını sağlamak için uluslararası bir yargılama mekanizmasının da kurulması gerekmektedir.

Çalışmamızın konusu bakımından önem arz eden bir diğer protokol ise, 1 Haziran 2010'da yürürlüğe giren 14 No.lu Protokoldür.[4] Uluslararası hukuk sistemi bakımından sadece yargılama organı olarak mahkemenin karar vermesi de yeterli değildir. Zira, uluslararası düzeyde faaliyet gösteren AİHM'nin kararını sözleşmeci devletler uygulamayabilirler. AİHM kararının sözleşmeci devletler tarafından uygulanmaması halinde, ihlal edilen temel hak ve özgürlükler sonucunda ortaya çıkan mağduriyetler giderilmemiş olacaktır (Karaman, 2014: 412). Bu nedenle, 14 No.lu Protokolle AİHM kararlarının sözleşmeci devletler tarafından yerine getirilmesinin denetimi bakımından, Avrupa Konseyi Bakanlar Komitesinin yetkileri arttırılmıştır. Ayrıca, sözleşmeci devletler tarafından AİHM kararının yerine getirilmemesi halinde uygulanacak olan yaptırımlara ve denetim usulüne yönelik ayrıntılı olarak düzenlemeler yapılmıştır.

Çalışmamızda AİHM'nin yargılama yetkisi, kararların bağlayıcılığı, sözleşmeci devletlerin AİHM kararlarından kaynaklanan yükümlülükleri

SAVAŞ EKONOMİSİ VE SAVAŞIN EKONOMİK ETKİLERİ

Esra Sena TÜRKO[1]

Adem TÜRKMEN[2]

1 Doç. Dr., Erzurum Teknik Üniversitesi, İktisadi ve İdari Bilimler Fakültesi, İktisat Bölümü, esturko@erzurum.edu.tr, ORCID: 0000-0002-9102-6120

2 Dr. Öğr. Üyesi, Erzurum Teknik Üniversitesi, İktisadi ve İdari Bilimler Fakültesi, İktisat Bölümü, adem.turkmen@erzurum.edu.tr, ORCID: 0000-0002-1534-2332

Orta Doğu'da yer alan ülkeler için savaş ve iç savaş konuları yeni bir gündem oluşturmamaktadır. Ancak Avrupa kıtası, Yugoslavya Federasyonu'nun dağılması sırasında yaşananlar dışında uzun yıllar sıcak çatışma görmemiştir. Rusya'nın 24 Şubat 2022'de Ukrayna'yı işgali ile savaşın bölge ülkelerine yayılması endişesi yükselmiş, İkinci Dünya Savaşı ve sonrasında yaşanan ülke işgalleri gibi Avrupa'nın hafızasındaki kötü olayları akla getirmiştir. Yeni bir dünya savaşının geliyor olabileceği ihtimali savaş ve savaş ile ilgili konuları tekrar her düzeyde gündeme getirmiştir.

Savaşlar; savaşın tipine, sıcak çatışma bulunma durumuna, çatışmanın ülke topraklarında veya yabancı ülke topraklarında gerçekleşme durumuna, süresinin uzunluğuna, tarafların sayısına (savaşın büyüklüğüne), tarafların ekonomilerinin büyüklüğüne ve teknoloji gücüne bağlı olarak değişen düzeylerde ekonomik etkiler doğurmaktadır.

Savaşın ekonomik etkilerini araştıran çalışmaların belirli konularda ve ülke gruplarında yoğunlaştığı görülmektedir. Araştırmacılar veri temin edebildikleri konuları ve ülkeleri, doğal olarak, daha çok çalışmıştır. Bu durumun bir sonucu olarak savaşın ekonomik etkileri konusunda araştırılmamış çok sayıda konu başlığı ve ülke grubu bulunmaktadır.

Savaşların ekonomik etkilerinin çok yönlü olarak araştırılamamasının en büyük sebebi savaşan ülkelerin araştırmacıların ihtiyaç duyduğu türden verileri yayınlamıyor veya yayınlayamıyor olmasıdır. Benzer bir durum iç savaş yaşayan ülkelerde de görülebilmektedir. Veri toplanamamıştır, yoktur veya savaşan ülke bilinçli olarak veri yayınlamıyordur. Savaşan ülke kendi halkına veya savaşın diğer taraflarına karşı zayıf görünmek istemediği için veri yayınlamayabilmektedir. Çeşitli uluslararası kuruluşlar tarafından yayınlanan verilerin güvenirliği ve gerçeği ne kadar yansıttığı ciddi bir tartışma konusudur. Verilerin bulunması durumunda (II. Dünya Savaşında ABD ekonomisi gibi), araştırmacıların konuyu fazlasıyla irdeledikleri görülmektedir. Ancak Ortadoğu'da uzun süren ve yıkım gücü yüksek savaşlar ile ilgili verilerin bulunmaması nedeniyle ekonomik araştırmaların da bulunmadığını söylemek mümkündür.

Literatürde savaşlar sırasında olağanüstü makroekonomik koşulların ortaya çıktığı belirtilir. Savaş ekonomileri, ABD ve Birleşik Krallık'ın dünya savaşları sırasında gösterdikleri performans göz ardı edilirse pek çok ortak özelliğe sahiptir. Extreme savaş koşulları altında ulusal ekonomilerin nasıl davrandığı, ekonomik teorinin nasıl işlediği görülebilmektedir (Caplan, 2002: 160).

Savaşların büyümeye katkı sağladığı hatta durgunluktan çıkmak için bir yol olabileceği konusunda görüşler bulunmaktadır. Özellikle ABD'nin II. Dünya Savaşı tecrübesine dayandırılan bu görüş savaşların makroekonomik etkileri konusunda genellemeler yapmayı engellemektedir. Dahası

GİRİŞ

Yabancı öğrenci, en öz tanımı ile eğitim-öğretim almak amacıyla kendi ülkesinden ayrılarak başka bir ülkeye giden öğrenciyi ifade etmektedir. Farklı ülkeler ve kuruluşlar tarafından çeşitli şekillerde tanımlanan uluslararası öğrencinin gittiği o ülkenin kanun ve kurallarına göre tanımlanması da farklıdır. Bu tanımlardan birisi de yabancı öğrenci ifadesidir. Yabancı öğrenci, bulunduğu ülkenin vatandaşı olmadığı halde ikamet iznine sahip olan öğrencidir. Uluslararası öğrenci ise ikamet iznine sahip bulunmayıp, sadece öğrenim görmek amacıyla ülkede bulunmaktadır.

İletişimdeki hızlı ilerleme, dünya ülkeler arasında yapılan birçok anlaşmalarla uluslararası öğrenci hareketliliğine hızlı bir ivme kazandırmıştır. Eğitim-öğretim alanındaki teknolojik gelişmeler, özellikle üniversitelerin lisans ve lisansüstü programlarında kalitenin her geçen gün artmasına neden olmaktadır. Uluslararası öğrencilerin ülke seçiminde, üniversitelerin kalitesinin de çok etkin hale gelmiştir.. Akademik anlamda kendilerini geliştiren üniversitelerin, uluslararası öğrenci kabulünde daha önde oldukları ve bu anlamda ülkelere mali katkılarının daha fazla olacağı görülmektedir.

Uluslararası öğrenci hareketliliği, eğitim-öğretim talep eden ülke vatandaşının farklı bir ülkeye gitmesidir. Bu ise üç şekilde yapılmaktadır; 1. Ülkeler arası değişim programları ile (Erasmus) 2. Ülkeler arası antlaşmalarla 3. Öğrencilerin tamamen kendi imkânları ile.

Kabul edilen öğrenciler açısından kendi ülke vatandaşının kazancı, farklı kültürlerin ve bilgi birikimlerinin tecrübe edilmesi ve uluslararası öğrencilerin ufuklarının genişlemesine katkı sağlamasıdır. Bunun yanında uluslararası öğrencilik; yaşadığımız dünyanın farklı lisanlarını, kültürlerini, ilim ve bilimlerini öğrenmek için çok büyük önem arz eder.

KAVRAMSAL ÇERÇEVE

Eğitim-öğretim için başka bir ülkeye giden misafir öğrencilerin dünya çapındaki dolaşımına baktığımızda, UNESCO verilerine göre 2000 yılında 2 milyonun üstünde olan uluslararası öğrenci hareketliliği 2005 yılında 3 milyona, 2012 yılında 4 milyon 800 binin üzerine çıkmıştır. Bu rakamın 2 milyon civarı Asya ve Afrika kıtasında; diğer 2 milyonluk kısmı ise Avrupa kıtasında, 800 bin civarı da Kuzey Amerika‘da eğitim-öğretim almaktadır (Şimşek & Bakır, 2016).

Uluslararası Yüksek Öğretim ve Türkiye’nin Konumu isimli çalışmada, Eğitim Ekonomisi, İş Konseyi Raporu‘na göre dünyada uluslararası öğrenci sayılarına bakıldığında en çok uluslararası öğrencinin bulunduğu ilk beş ülkenin sırasıyla ABD %19, Birleşik Krallık %10, Fransa %6, Avustralya %6 ve Almanya %5 olduğu görülmektedir (DEİK, 2013: 15).

İLK HALKA ARZLARDA DÜŞÜK FİYATLAMA ÜZERİNE KAPSAMLI BİR LİTERATÜR TARAMASI[1]

Orhan Emre ELMA[2]

1 Bu çalışma sorumlu yazarın, Prof. Dr. İlhan KÜÇÜKKAPLAN danışmanlığında yazdığı "İlk Halka Arzlarda Değerleme Etkisi: Borsa İstanbul'da Bir Uygulama" adlı Doktora Tezi'nden üretilmiştir.

2 Dr.Öğr.Üy., Necmettin Erbakan Üniversitesi, Uygulamalı Bilimler Fakültesi, Muhasebe ve Finans Yönetimi, Türkiye, ORCID: 0000-0002-3521-3677.

1. GİRİŞ

Finansal piyasalarda doğru karar alınabilmesi finansal paydaşlar açısından çok önemlidir. Bu açıdan farklı enstrümanlar arasından en optimalinin bulunması finansal karar vericilere yardımcı olacaktır. İlk halka arz, şirketlerin sermaye piyasalarına farklı sebeplerden dolayı adım atması ile gerçekleşmektedir. Bu sebepler arasında, ileride daha çok kreditöre ulaşabilme, şirket tanınırlığı ve prestijini artırma, ihracat kanallarını genişletme gösterilebilir. Şirketlerin ilk halka arz gerçekleştirmesi öncesinde, yatırım bankaları ile anlaşmaları ve şirketlerinin değerini hesaplatmaları gerekmektedir. Daha sonrasında ise belirlenen aracı kurum ya da konsorsiyum vasıtası ile halka arz için düğmeye basılır.

Yatırımcıların doğru yatırım tercihinde bulunabilmesi için uygulanabilecek çeşitli istatistiksel ve ekonometrik teknikler bulunmaktadır. Bununla birlikte, yatırım yapılan piyasanın etkinliğine göre de teknik ve temel analiz setlerinden faydalanılabilir. Teknik analizde, yakın geçmişteki hisse fiyatı hareketleri ile, yakın gelecekteki fiyat hareketleri istatistiksel modellemeler yardımıyla tahmin edilmeye çalışılır. Temel analizde ise, finansal tablolardaki veriler ve bu veriler arasındaki ilişkilere göre hesaplanan oranlar vasıtasıyla, şirketin hem geçmiş performansına hem de firmanın ve rakiplerinin güncel performansına odaklanılarak, karşılaştırılmalı analiz yapma fırsatı elde edilir. Fakat burada hayati öneme sahip olan parametre, bu finansal tablo verilerinin güvenilir olmasıdır.

Firmanın ilk işlem günü kapanış fiyatı ile halka arz fiyatı arasındaki pozitif fark düşük fiyatlama olarak adlandırılmaktadır. Dünya'da gelişmiş ve gelişmekte olan ülke fark etmeksizin farklı tipte sermaye piyasasında karşımıza çıkan bu sorun, literatürde geniş bir araştırma havzası oluşturmuştur. Sermaye piyasalarının etkinliği, ortalama spekülatörlerin bilgi düzeyi, yatırımcıların duygusal karar alma ölçüsü, kültürel farklılığın yatırım kararlarına yansıma seviyesi gibi birçok değerli ve önemli parametrede bilgi içeren düşük fiyatlama gerçeği, araştırmacıların ilgisini çekmeye devam etmektedir.

Bu çalışmada, düşük fiyatlama üzerine yapılan dünya çapındaki çalışmalar, farklı kategorilere ayrılarak incelenecektir. Çoğunlukla Web of Science ve alan indekslerinde taranan ve farklı ülkelerin sermaye piyasalarını inceleyen 100'ün üzerinde çalışma, araştırma kapsamına alınmıştır. Bu amaçla, bu literatür araştırmasının düşük fiyatlama ile ilgili yapılacak çalışmalar için genel perspektif vereceği düşünülmektedir.

2. LİTERATÜR TARAMASI

Düşük fiyatlama, bir ilk halka arzın ilk işlem günündeki kapanış fiyatının arz fiyatından yüksek olması şeklinde tanımlanmaktadır. 55 ül-

BÖLÜM 31

TÜRKİYE'DE YOKSULLUK VE MAKRO İKTİSADİ GÖRÜNÜM

Selda Görkey[1]

1 Dr. Öğr. Üyesi. Işık Üniversitesi. İktisadi, İdari ve Sosyal Bilimler Fakültesi, İktisat Bölümü, İstanbul, Türkiye.

e-posta: selda.gorkey@isikun.edu.tr ORCID ID: 0000-0002-2760-3667

GİRİŞ

Yoksulluk, birçok disiplini ilgilendirmekle birlikte bir ülkedeki bireylerin yaşam standartlarıyla ilgili olması sebebiyle İktisat disiplininin önemli konuları arasında yerini almıştır. Yoksulluk hem mikro hem de makro iktisat literatüründe kendisine sıklıkla yer bulmaktadır. Konunun mikro bazda incelenmesi, bireylerin demografik özellikleri ve eğitim düzeyleri gibi faktörlere odaklanarak konuyu birey ve hanehalkı bazına indirgeyerek incelemektedir. Makro İktisat ise ülkenin tamamında karşılaşılan yoksulluğu bütüncül bir yaklaşımla araştırır. Dolayısıyla, belirli bir ülkedeki yoksulluk profilinin oluşturulması ve yoksulluğa karşı uygulanan makro iktisat politikaları bu kapsamda incelenebilir.

Yoksulluğa makro iktisadi açıdan yaklaşımlarda önem taşıyan konulardan bir diğeri ise ülkedeki makro ekonomik görünümün ve makro ekonomik istikrarın (ya da istikrarsızlığın) yoksulluk düzeyine etkilerinin ya da olası etkilerinin irdelenmesidir (Agénor, 2005: 382; Cashin vd., 2001: 4; Ames vd., 2001: 1). Her ne kadar yoksulluk profilinin oluşturulması ve politika önerilerinin sunulması makro perspektif açısından önem taşısa da öncelikle içerisinde bulunulan ülkenin makro iktisadi ortamının iyi bir düzeyde tanınması ve makro iktisadi açıdan gelecek risklerin belirlenmeye çalışılması bir gerekliliktir. Ancak bu şekilde doğru bir profil çıkarılması ve uygun politika önerileri sunulması mümkün olabilir.

Konuya ilişkin literatür incelendiğinde, makro iktisat ve yoksulluk etkileşimine odaklanan çok sayıda çalışma olduğu (Agénor, 2005; Ames vd., 2001; Blank & Blinder, 1985; Bouché vd., 2004; Cashin vd., 2001; Radhakridhna & Panda, 2006), bu çalışmalardan bazılarının (Açıkgöz & Yusufoğlu, 2012; Bayrakdar, 2020; Türk & Ünlü, 2016) Türkiye'ye odaklandığı görülmektedir. Ancak Türkiye'ye odaklanan çalışmaların konuyu genellikle kavramsal açıklamalar yapmak, yoksulluk profili çıkarmak ve/veya makro politikalar önermek ya da tartışmak amacıyla irdelediği görülmektedir. Buna ek olarak, literatürde nispeten sınırlı sayıda çalışma incelenen ülkenin mevcut makro iktisadi durumu ile yoksulluğu bir arada değerlendirmektedir (Blank & Blinder, 1985; Bouché vd., 2004; Radhakridhna & Panda, 2006; Türk & Ünlü, 2016). Bu çalışma ile literatürde bahsedilen bu sınırlı alana katkı yapılması hedeflenmektedir.

Bu çalışma ile Türkiye'deki yoksulluğun profili ile ülkenin içerisinde bulunduğu makro iktisadi ortam bir arada değerlendirilmektedir. Çalışmada ilk olarak yoksulluk kavramına ve makro iktisat ile bağlantısının arka planına değinilmekte, ardından Türkiye'deki yoksulluğa ilişkin çeşitli istatistiksel göstergelere yer verilerek yoksulluğun zaman içindeki seyri ortaya konmuştur. Ardından Türkiye'deki makro iktisadi duruma ilişkin bilgiler paylaşılarak, mevcut ekonomik ortamın yoksulluğu ne şekilde etkilemiş

İZMİR SAĞLIK TURİZMİ YÖNETİMİ[1]

Ali KÖSTEPEN[2]

1 Dipnot: Bu çalışma 2015 yılında Ali Köstepen tarafından yazılmış olan "İzmir İlinin Medikal Turizm Potansiyelinin Tespiti" isimli Yüksek Lisans tezinden türetilmiştir.

2 Dr. Öğr. Üyesi Ali KÖSTEPEN, İzmir Katip Çelebi Üniversitesi İktisadi ve İdari Bilimler Fakültesi İşletme Bölümü, ORCID: 0000-0002-0225-9142

1. Alternatif Turizm ve Sağlık Turizmi Kavramları

1.1. Alternatif Turizm

Alternatif turizm; kitle turizmi kapsamında deniz, kum ve güneş üçlemesinin ötesine geçerek turizm faaliyetlerinin çeşitlendirilerek doğaya, çevreye ve yerel halka duyarlı bir anlayış ile yıl içerisine yayılması olarak tanımlanabilir (Ulusan ve Batman, 2010). Daha net bir şekilde belirtilmesi gerekirse, kitle turizmi kapsamında deniz bölgelerinde yer alan destinasyonlarda aşırı bir büyüme ve gelişme gerçekleşmektedir. Bu durumda aşırı otel inşaatları ve destekleyici binaların inşa edildiği görülmektedir. Bu durum destinasyonun tarihi, kültürel, mimari ve çevresel birikimine zarar verdiği ve vereceği ifade edilebilir (Zengin ve Sancar, 2014). Alternatif turizm, kitle turizmine karşı ortaya çıkan, olumsuz bir anlayış ile yorumlanmaması gereken bir kavramdır.

Bu bağlamda alternatif turizm; doğaya, çevreye saygılı ve sürdürülebilir bir anlayış ile turizm faaliyetlerinin daha kapsayıcı ve çeşitli (doğa turizmi, yayla turizmi, kongre turizmi, kırsal turizm, inanç turizmi, sağlık turizmi, moda turizmi, gastroturizm ve benzeri) bir şekilde turizm faaliyetlerini kapsayan bir kavram olarak tanımlanabilir (Düşmezkalender ve Metin, 2019).

Alternatif turizm kavramı sonraki nesillere daha yaşanabilir alanlar bırakmak ve turizm faaliyetlerinin de uzun soluklu olmasını sağlamak amacıyla ortaya çıkmış olduğu ifade edilebilir. Alternatif turizm kavramı, yerel halkı ve küçük yatırımcıları turizm etkinliğinin dışında bırakmadan toplu bir şekilde kalkınmanın sağlanabileceğini içeren bir anlayış olduğu belirtilebilir (Şeyhanlıoğlu ve Kıngır, 2021).

Alternatif turizm kapsamında, kitle turizminin yanında ortaya çıkan, turizm türleri yer almaktadır. Bunlardan bir tanesi olan sağlık turizmi de alternatif turizm kavramı içerisinde yer almaktadır (Şahbaz vd., 2012).

1.2. Sağlık Turizmi

Dünya genelinde bireylerin gelir düzeylerinin artması ve mobilitenin yaygınlaşması ile bireyler sağlık hizmeti almak ve kendilerini daha iyi ve zinde hissetmelerini sağlamak amacıyla seyahatler gerçekleştirmektedirler. Bu seyahatlere ve gidilen destinasyonda sağlık ve turizm hizmetlerini almalarına sağlık turizmi denilmektedir (Annette ve Arellano, 2007).

Sağlık turizmi başlığı altında dikkat edilmesi gereken bir husus; sağlık turisti ve turistin sağlığıdır. Turistin sağlığı, turizm amacıyla bir destinasyona giden bir turistin, turizm faaliyeti içerisinde sağlık problemi yaşaması sonucunda almış olduğu sağlık hizmeti anlamına gelmektedir. Bu durum sağlık turizmi kapsamında ele alınmamaktadır. Sağlık turisti ise,

FİNANSAL GELİŞMİŞLİK İLE FİNANSAL HİZMETLER GÜVEN ENDEKSİ ARASINDA EŞBÜTÜNLEŞME ANALİZİ

Tuncer YILMAZ[1]

1 Dr. Öğr. Üyesi, Kafkas Üniversitesi, Susuz Meslek Yüksekokulu, yilmaz-tuncer@hotmail.com, ORCID ID: 0000-0001-8956-5814

1. GİRİŞ

Finansal gelişme, finansal piyasaların büyüklüğü, etkinliği ve istikrarının gelişmesi olarak ifade edilebilirken aynı zamanda ekonomi için birçok avantaj sağlayabilecek, finansal piyasalara erişimin artması olarak tanımlanabilir (Guru ve Yadav, 2019). Finansal gelişme, sermayenin daha etkin kullanımı, finansal istikrarın sağlanması ve gelişimi için ülkenin finansal sisteminde yer alan kurumların elindeki araçların bir bütün olarak hem nicelik hem de nitelik açısından yapısal gelişimi olarak da tanımlanabilir (Felek vd., 2021: 1166). Finansal gelişmeye bağlı olarak finansman temininin dış kaynaklardan sağlanması, finansal aracılık faaliyetleri ile kredi tahsisinin gelişmesi ve finansal piyasalara olan erişimin daha kolay hale gelmesi, ekonomik döngüde yer alan bütün aktörler arasında rekabeti de teşvik eden bir ortam sunmaktadır.

Bu nedenle en temel kavramsal düzeyde finansal gelişme, finansal araçlar, piyasalar ve aracıların; eksik bilgi, sınırlı uygulama ve işlem maliyetlerinin etkilerini azaltması halinde gerçekleşmektedir. Bununla birlikte, finansal sistemin piyasa kusurlarını hafifletme derecesi açısından finansal gelişmeyi tanımlamak çok zordur. Daha geniş bir düzeyde finansal gelişme, beş temel finansal fonksiyonun kalitesindeki iyileştirmelerdir (Čihák vd., 2013).

- Olası yatırımlar hakkında bilgi üretmek ve işlemek ve bu değerlendirmelere dayalı olarak sermaye tahsis etmek;
- Bireyler ile firmaları izlemek ve sermayeyi tahsis ettikten sonra kurumsal yönetimi uygulamak;
- Ticaretin, çeşitlendirmenin ve risk yönetiminin kolaylaştırılması;
- Tasarrufların ekonomi için harekete geçirilmesi ve bir havuzda toplanması ve
- Mal, hizmet ve finansal araçlardaki değiş tokuşu kolaylaştırmak.

Finansal gelişmenin ülke ekonomisini pozitif etkilediğine yönelik görüşler ilk olarak Goldsmith (1969), McKinnon (1973) ve Shaw'un (1973) öncü çalışmalarıyla başlamasından bu yana hala önemli bir tartışma konusu olmaya devam etmektedir. Çünkü daha yüksek finansal gelişme düzeyine sahip ekonomiler daha hızlı büyür ve yoksulluk seviyelerinde daha hızlı düşüş yaşarlar (Čihák vd., 2013).

Ancak ülkenin finansal piyasalarını dışarıya açarak, ülkeye gelen yabancı sermayenin finansal gelişmeyi destekleyebilmesi için öncelikle güvenilir ve doğru bilgilerin daha erişilebilir hale getirilmesi gerekmektedir. Bu ancak finansal piyasaların, iyi işleyen bir kurumsal yapıya sahip olmasını ve etkin çalışmasını sağlayacak bir finansal sitemin inşa edilmesiyle mümkün olmaktadır. Finansal sözleşmeleri hızlı ve adil bir şekilde uygulayan bir hukuk sistemi finansal gelişmeyi destekler. Aksi

BÖLÜM 34

TÜRKİYE'DE SERMAYE PİYASALARININ GELİŞİMİ KAPSAMINDA DENETİM TARİHİ

Pınar DALOĞLU[1]

1 Pınar Daloğlu, Dr. Öğretim Üyesi, T.C. İstanbul Arel Üniversitesi, pinardaloglu@arel.edu.tr, ORCID: 0000-0002-1456-4603.

1. Giriş

Denetim, sanayi devrimi ile işletme sahipleri için dolandırıcılık ve hata tespiti olarak ortaya çıkmış; günümüzde yönetim tarafından sağlanan yıllık raporlarda mali ve mali olmayan bilgilere güvenilirlik kazandırmaya yönelik bir süreç haline gelmiştir. (Heang ve Azham, 2008:6) Denetimin fonksiyonu bu bağlamda, kabul edilmiş ve meşru menfaatleri olan başkalarının davranışları veya performansı hakkında bilgi veren veya güvence arayan toplumdaki bireylerin veya grupların ihtiyacı doğrultusunda geliştiği söylenebilmektedir. (Flinte, 1988: 1) Dolayısı ile bir toplumun parçasını oluşturan hemen her kesimin, ekonomik ilişkilerinin, denetimin gelişiminde etkisi olduğu söylenebilmektedir.

Denetimin ortaya çıkışından günümüze kadar evrimi farklı teoriler kapsamında ele alınmaktadır. Vekâlet teorisi ve kredilendirme güvenilirliği teorisi bunlara örnektir. Vekâlet teorisinde, işveren ile vekil arasındaki vekâlet problemlerinin denetimin ortaya çıkmasında önemli bir rolü olduğu savunulmaktadır. Kredilendirme güvenilirliği teorisinde ise ekonomik ilişkilerde karşı tarafa güven verme ihtiyacının yer aldığı söylenebilmektedir. Bu problemlerin ortaya çıkmasında ise genişleyen ekonomik ilişkilerin ve dolayısı ile büyüyen sermaye piyasasının önemli bir etkisi bulunmaktadır. Bu çalışmada, Türkiye'de denetime olan ihtiyacın bu teoriler kapsamındaki gelişim süreci ele alınmaktadır. Her iki teoride de sermayenin genişlemesi ön koşul olarak gösterilebilmektedir.

Çalışmada Türkiye'deki devlet düzenlemeleri ile gelişen ekonomik ilişkiler neticesinde şekillenen işletmeler ile denetim tarihi incelenmektedir. Türkiye'de vekâlet problemleri ve kredilendirme güvenilirliğinin, denetimin gelişimindeki etkisi anlaşılmaya çalışılmaktadır. Diğer bir ifade ile *"Türkiye'deki işletmelerin tarihsel gelişimi, vekâlet ve kredilendirme problemlerinin de tarihsel gelişimi ile paralellik göstermekte midir?"* sorusu irdelenmektedir. Türkiye'deki denetim tarihi çalışmaları incelendiğinde, yasal düzenlemeler doğrultusunda incelemeler yapıldığı görülmektedir. Bu çalışma yasal düzenlemelerden ziyade, ekonomik ilişkilere odaklanmakta; biyografik eserler incelenerek söylemler ve gerçek olaylara odaklanmaktadır. Bu açıdan literatüre önemli katkı sunacağına inanılmaktadır. Türkiye'de sermaye hareketlerinin özellikle 1980'lerdeki genişleme ile hızlanmış olması nedeniyle, incelemede tarihsel olarak bu dönem sonrasına yoğunlaşılmaktadır.

2. Genel Olarak Denetim Teorileri

Denetimin ihtiyaçlar dahilinde ortaya çıkışından günümüze amacı değişmemekle birlikte *"hedef kullanıcılar*"ın, işletmelerin ekonomik büyüklükleri, ilişkili tarafları, ekonomik ilişkileri, tabi bulundukları yasal düzenlemeler ve ekonomik konjonktür ile farklılaştığı bilinmektedir.

TÜRKİYE'NİN TERÖR ÖRGÜTÜ PYD/ YPG İLE MÜCADELESİ

Serpil GÜDÜL[1]

1 Dr. Öğr. Üyesi, Ankara Hacı Bayram Veli Üniversitesi
serpil.gudul@hbv.edu.tr
ORCID: 0000-0003-1124-7968

1. Giriş

Türkiye ile Suriye arasındaki siyasi ilişkiler yıllarca iki ülke arasındaki sorunlar doğrultusunda yürütülmüştür. Bu sorunlar, su sorunu, Hatay konusu, Kürdistan İşçi Partisi (PKK) meselesi gibi önemli konuları içermektedir. Bu sorunların arasında, iki ülke arasındaki ilişkileri önemli ölçüde etkileyen ve en önemlisi olan kuşkusuz PKK sorunudur. Suriye'nin PKK'ya verdiği destek, iki ülke arasında çok ciddi krizlerin yaşanmasına sebep olmuştur. Bu nedenle Türkiye ile Suriye arasındaki siyasi ilişkilerin PKK ile mücadele çerçevesinde değerlendirilmesi çalışmanın konusunu oluşturmaktadır. PKK ile mücadele çerçevesinde iki ülke arasındaki ilişkilerin değerlendirilmesi iki ana döneme ayrılmaktadır. Suriye'de yaşanan iç savaş dönemi ise çalışmanın dönemsel açıdan odak noktasını oluşturmaktadır.

Arap Baharı olarak adlandırılan Kuzey Afrika ve Ortadoğu ülkelerinde ortaya çıkan Arap isyanlarının Suriye bölümü kanlı bir iç savaşa sahne olmaktadır. Hafız Esad'ın 2000 yılında vefatından sonra iktidara gelen Beşar Esad ülkede otoriter rejimi devam ettirerek halkın reform taleplerini göz ardı etmiştir. Bu baskı rejimi ülkeyi 2011 yılında başlayan ve süregelen bir iç savaşa sürüklemiştir. İç savaş süresince başta Suriye'nin kuzey bölgeleri olmak üzere birçok bölgede Suriye rejimi kontrol gücünü kaybetmiş ve otorite boşluğu oluşmuştur. Bu dönemde PKK terör örgütü, Suriye'de Demokratik Birlik Partisi (Partiya Yekîtiya Demokrat - PYD/YPG) adı altında, otorite boşluğundan yararlanarak bu bölgelerde yapılanmıştır. Türkiye'de 1973 yılında kurulmasından bu yana en önemli tehdit unsuru halini alan PKK terör örgütü, iç savaş öncesi Suriye'den önemli ölçüde destek alarak ilişkileri büyük ölçüde etkilemiştir. PKK nedeniyle savaşın eşiğine gelene iki ülke, 1998 yılında Adana Mutabakatı ile PKK sorunu aralarında çözülmüştür. Ancak Suriye'de iç savaşın çıkması ile PYD/YPG adı altında PKK'nın Suriye kolu tekrar bölgede Türkiye'ye tehdit unsuru olarak ortaya çıkmıştır. Konjonktürel gelişmeler doğrultusunda önem kazanan vekâlet savaşları çerçevesinde Amerika Birleşik Devletleri (ABD)'nden büyük destek alan örgüte karşı Türkiye, konu ile ilgili devletlerle görüşmeler ve anlaşmalar yapmak suretiyle barışçıl yollarla sorunu çözme çabalarının yanı sıra uluslararası hukuk çerçevesinde meşru müdafaa hakkını korumaya yönelik politikalar izlemiştir. Çalışma, Türkiye'nin terör örgütü PKK'nın Suriye kolu PYD/YPG ile mücadeleye yönelik politikaları içermektedir. Bu çerçevede Türkiye'nin düzenlediği operasyonlar ve sonuçları da çalışmada yer almaktadır.

2. İç Savaş Öncesi Türkiye-Suriye İlişkilerinde PKK Sorunu

Suriye iç savaşı öncesi dönemde, Türkiye ve Suriye arasındaki ilişkiler tarihten ve coğrafyadan kaynaklı birçok sorunu barındırmıştır. Sınır

CHAPTER 4

GLASS IONOMER CEMENT: PAST AND FUTURE

Mediha BÜYÜKGÖZE DINDAR[1]

1 Dr. Öğretim Üyesi, Trakya Üniversitesi Sağlık Hizmetleri Meslek Yüksekokulu, Ağız ve Diş Sağlığı Programı, ORCID ID: 0000-0003-3794-4366

Conventional glass ionomer cement (GIC), formed through the acid/base reaction between calcium (or strontium) aluminosilicate and polyalkenoic acid, was developed in the mid-1970s to provide an alternative solution to the commonly used amalgam restorations in the posterior region (Sidhu & Nicholson, 2016). Unfortunately, both the clinical longevity and overall quality of these chemically curing restorative materials ended up to be only lower and not advisable for posterior use. Although the various material improvements made promise to provide exceptional properties such as chemical adhesion, simple application, moisture tolerance, along with bioactive properties (anti-microbial and anti-cariogenic effects due to a significant amount of fluoride release), applicators still deal with significant disadvantages, especially associated to insufficient compressive and/or bending strengths, poor abrasion resistance and esthetics (Kielbassa, Oehme, Shakavets, & Wolgin, 2021). The wear rate of conventional GICs was five times greater than amalgam and three times higher than composite-resin materials (Türkün & Kanik, 2016). Therefore, it was not surprising that their use was limited to only temporary treatment applications. However, nowadays, with various developments, GIC can show promising results even the stress-bearing sites (Fuhrmann, Murchison, Whipple, & Vandewalle, 2020).

Glass ionomers represent a group of materials with the same chemical properties. Classifications are made according to powder particle size, surface reactivity of powder particles, cure rate, and resistance to water loss and uptake (Mount, Makinson, & Peters, 1996). GIC can be classified as adhesive, base material, restorative, and root-canal filling paste according to their usage. According to their content; conventional glass ionomer cement (CGIC); hybrid glass ionomer cement (resin-modified glass ionomer cement (RMGIC)); polyacid-modified composite resins (compomers); high viscosity glass ionomer cement (HVGIC); giomers and nano-ionomers (Elmacı & Tunçdemir, 2020). The accepted classification is organized according to use in restorative dentistry (Mount, 1998) and can be schematized as follows (Table 1):

Introduction

Extracellular vesicles (EVs), which until recently were thought to be responsible only for removing cell wastes from the cell, are lipid-bound vesicles secreted out of the cell (Zaborowski et al., 2015). EVs are nano-sized structures released from cells to the extracellular space, which can transfer cargo containing many components of the cell, such as nucleic acids (DNA and RNA), lipids, proteins, and various metabolites to enable intercellular communication (Yáñez-Mó et al., 2015; Doyle and Wang, 2019). EVs deliver their cargo to target cells and tissues through many body fluids (such as saliva, urine, blood, lymphatic system, breast milk, cerebrospinal fluid) (Boukouris and Mathivanan, 2015). EVs play important roles in many physiological and pathological processes using different signaling pathways (Rezaie et al., 2022). It is known that EVs consist of 3 main subtypes according to their intracellular origin, biogenesis mechanisms, secretory pathways from the cell, size, cargo contents and functions (Borges et al., 2013; Doyle and Wang, 2019).

1. Microvesicles (MVs)
2. Apoptotic bodies
3. Exosomes

1. Microvesicles (MVs):

MVs are vesicular in the 100-1000 nm size range formed by budding or pinching directly out of the cell membrane (Teng and Fussenegger, 2020). MVs are also known as ectosomes or microparticle-derived vesicles. Exosomes and microvesicles are secreted from healthy cells into the extracellular space (Zhang and Yu, 2019). Membrane proteins such as CD42 (integrin GPB) and P-selectin are localized abundantly on microvesicles (Heijnen et al., 1999). Microvesicles can be detected by flow cytometry and electron microscopy methods, and other proteins identified in MVs are cytoskeletal proteins, HSPs (heat shock proteins) (Doyle and Wang, 2019). It has been understood that MVs are not only a means of removing unwanted residues within the cell, but also one of the mechanisms responsible for cell-cell communication between both nearby and more distant cells (Rak, 2010).

2. Apoptotic bodies:

Apoptotic bodies are released from the plasma membrane in the late stage of apoptosis, a programmed cell death (Zhang et al., 2019). Apoptotic bodies are heterogeneous populations of Membrane vesicles, ranging in size from 50 to 5000 nm (Théry et al., 2001; Borges et al., 2013). Apop-

INTRODUCTION

Many women around the world suffer from Pelvic Congestion Syndrome (PCS), which frequently goes undiagnosed. A comprehensive approach is required for an accurate diagnosis of gynecological symptoms with a vascular background. Atypical varicose veins and chronic pelvic pain have this as a relevant cause. Imaging studies that have been correlated with the clinical presentation form the basis of the diagnosis. Possible causes of PCS include genetic proneness, anomalous anatomy, hypertension, hormonal factors, vein wall damage, valve dysfunction, reversal of the blood flow, and dilatation, even though its exact cause is still unknown.

Chronic pelvic pain (CPP) is described as pelvic or abdominal discomfort/ache that lasts for more than six months also is either intermittent or persistent(1). CPP affects many women and has a significant financial impact on health budgets (2). It is severe enough to require treatment or leave one with a functional disability.

PCS is frequently an underdiagnosed cause of chronic pelvic pain in female patients. It can happen on its own or in conjunction with lower extremity venous insufficiency, vulvar varicosities, or both. The systematic review written by Ahangari states that its prevalence varies between 6% and 27% globally (3). According to some authors, PCS may contribute to CPP in as many as 30% of women (4,5).

39% of women or more say they eventually experience pelvic pain (6). Roughly 20% of all laparoscopic surgeries are carried out for chronic pelvic pain, and 2% to 10% of all gynecological clinic consults are for pelvic pain. Around 7 million of the estimated 10 million women who have this illness choose not to receive treatment.

The effects of CPP on the economy are astounding. The estimated annual medical expense for diagnosing and treating CPP is $1.2 billion. These patients are estimated to cause a loss of $15 billion in productivity each year. For as many as 61% of patients, there is no known cause of their discomfort (7). According to estimates, the prevalence of persistent pelvic discomfort varies from 5.7% in Austria to 26.6% in Egypt (8). 3.8% of women in the UK experience it on an annual basis, making it a common presentation in primary care. This proportion is likened to back ache (4.1%), and asthma (3.7%) (9).

HISTORY

Richet noted a connection between varicose veins in the utero-ovarian plexus and persistent pelvic pain in the middle of the 19th century. He also noted the occurrence of pelvic varices (10). Taylor first identified pelvic

CHAPTER 7

BIOGENESIS AND FUNCTION OF EXTRACELLULAR CIRCULATING MicroRNAs

Serap ÖZER YAMAN[1]

1 Dr. PhD, serapozer@ktu.edu.tr, Department of Medical Biochemistry, Graduate School of Health Sciences, Karadeniz Technical University, Trabzon, Turkey. ORCID ID: 0000-0002-5089-0836

Introduction

All eukaryotic cell types express microRNAs (miRNAs), a subclass of short noncoding RNAs that are involved in post-transcriptional control of gene expression. The 3-UTR of target mRNAs is where miRNAs bind to exert their effects, controlling the stability and protein production of the targeted mRNAs (Ambros, 2004; Bartel, 2004). Human miRNAs come in more than 2812 distinct subtypes, and this number is increasing (http://www.mirbase.org/). Endogenous miRNAs in humans regulate at least 30% of their genes associated (Lewis et al., 2005). As a result, they contribute in coordinating fundamental biological functions such cell division, DNA repair, differentiation, metabolism, and apoptosis (Ambros, 2004; Bartel, 2004; Croce et al., 2005). Many diseases, including cancer, have continuously been related to the liberation of several miRNAs' expression in cells (Lu et al., 2005). Each miRNA has a distinct expression pattern in a particular cell type and a distinct nucleotide sequence (Lu et al., 2005; Landgraf et al., 2007).

All biological fluids, including blood plasma, urine, tears, breast milk, amniotic fluid, cerebrospinal fluid, saliva, and semen, were found to contain large amounts of miRNA a few years ago (Turchinovich et al., 2012). These extracellular (EC) circulating miRNAs are unexpectedly resilient, surviving harsh physiologic circumstances like boiling, numerous freeze-thaw cycles, significant pH fluctuations, and extended storage. Common RNAs, including as mRNA, rRNA, and tRNA, are quickly broken down in the nuclease-rich EC media in contrast to miRNAs. (Chen et al., 2008; Turchinovich et al., 2011). Exosomes were found to transport intracellular miRNAs into the EC environment when cells were cultured. (Valadi et al., 2007).

Gene regulation and intracellular miRNA production

Normally, transcription of cell genes results in the production of miRNA. These steps are part of the miRNA biogenesis pathway in animal cells. In the nucleus, stem-loop structures are found in primary transcripts (pri-miRNAs), which are how genes are first translated. The endonuclease Drosha will then cut the stem loop structure in the pri-miRNA, producing precursor miRNAs (pre-miRNAs) that are around 70 nt in length. After then, the pre-miRNA is moved outside of the nucleus. Exportin-5 transports it to the cytoplasm, where Dicer/TRBP (TAR RNA-binding protein) further cleaves the "loop" construct to create the mature miRNA/miRNA* duplex. Once the duplex miRNA* helix relaxes, sheds, and degrades, the mature miRNA is subsequently loaded into Argonautes (Ago) to create core effector complexes called miRNA-induced silencing complexes (miRISCs) (Iwakawa et al., 2021). The biological function of miRNA in

Introduction

Head and neck squamous cell carcinoma (HNSCC), originating from the oral cavity, pharynx, and larynx mucosal epithelium, constitutes approximately 2.4% of all malignant tumors. It is the sixth most common malignancy in developed countries (1). The most common type of HNSCC is oral squamous cell carcinoma (OSCC) (> 90%) (2). Worldwide, approximately 600,000 new cases occur annually. These are too often seen in developing countries, especially in Asia (3). These are 5% of all cancers in men and 2% of all cancers in women (4). Examination of the characteristics of OSCC showed that tumor stage or grade did not differ with age (5). Although early screening and individualized treatment options have improved, OSCC still maintains its importance.

Cancer formation is a multi-stage process that occurs with the accumulation of genetic and epigenetic changes in cancer-related genes over time (6). OSCC is caused by a lot of genetic changes caused by many factors. Recurrent and metastatic OSCC often cannot be cured. In addition, our knowledge about the clinical course, biology, and genetic biomarkers of this disease is not fully sufficient. Despite the improvement of diagnosis and treatment methods, the 5-year survival rate of patients has not changed and is still below 50% (7). Therefore, understanding the molecular mechanisms of the disease is important for early diagnosis, appropriate treatment, and prognosis. Today, cancer treatment is evolving to be targeted specifically at the individual. The most widely used treatment is targeted immunotherapy, which improves 5-year survival in many cancers (8). In this review, we will summarize the role of long non-coding RNAs (lncRNAs) in OSCC.

Risk factors for oral cancer

Oral cancer is a critical healthcare problem. It is counted as the main cause of death from oral diseases in many countries. OSCC is more common in underdeveloped countries. Risk factors for OSCC include carcinogens that may synergize during oral carcinogenesis. It is estimated that 75% of all oral cancers are caused by preventable causes, since relative risk factors such as alcohol and tobacco are at the forefront. Apart from these, the cause of cancer is not completely clear in the other 25% (9). The higher incidence of head and neck cancer in some countries than other malignancies may be due to low socioeconomic status associated with tobacco and alcohol consumption, poor hygiene, malnutrition, and widespread viral infections (10).

Tobocco: In Asian countries, especially India, oral cancer is thought to be associated with betel quid (BQ) and chewing tobacco. In westbound

INTRODUCTION

Being one of the innovations gradually increasing in technology and field of education, simulation applications and simulation tools provides increase in technical and non-technical skills in nursing education (Goris et al., 2014). Described as a teaching method used to increase real life experiences, simulation has gained a ground in nursing education at the level of bachelor's degree within the frame of skill development (Brown, 2015). The opportunity of applying theoretical information in practice and decreasing the difficulties that students face in clinical environments can be found by means of simulation trainings (Terzioglu et al., 2012).

The skills required to be gained in mental health and diseases nursing education vary. The clinical environment can be animated close to real life with the simulations used in this field. It provides gaining consistent, comparable, reproachable, and discussable experiences with active learning (Durham & Aldem, 2007). Biases, stigmatization, anxiety and fear etc. cases may prevent gaining these experiences by means of real patients. It was determined in a study carried out in Turkey that 73,9% of nursing students at the level of bachelor degree have not made contact with a patient with a mental disorder before taking the course of mental health and diseases and 34,4% of the students entering into psychiatry clinical practices are scared during practices and 41,7% are demoralized (Ozbas & Buzlu, 2011). Besides these, students cannot encounter all cases during practices as the circulation of patients is high, the staff is insufficient, clinical practice hours are inadequate or they may have some difficulties in learning because of the policies of health institutions limiting the studies of student nurses. For these reasons, use of simulation in nursing education has gained importance (Brown, 2008; Brown, 2015; Guise et al., 2012).

Literature Information

The design and method of simulation should be elaborated for ensuring successful outcomes of simulation applications having great importance in nursing education (Hammer et al., 2014). "The Framework of Design, Application and Assessment of Simulation used in Nursing Education" was formed by Jeffries in 2005. There are five significant variables in the framework that are related to one another. These variables cover educational applications, teacher, student, design features of simulation and conclusions (Grom et al., 2013; Jeffries, 2005). Use of simulation method used in nursing education within the framework will provide the increase in the efficacy of simulation.

Students manage the simulation by themselves by playing the roles of patient, patient's relative, healthcare practitioners. Trainers facilitate,

CHAPTER 10

SUSTAINABLE NUTRITION AND ENVIRONMENTAL EFFECTS

Nurgül ARSLAN[1]

1 Doktor Öğretim Üyesi, Dıcle Unıversıty Atatürk Faculty Of Health Scıences, Department Of Nutrıtıon And Dıetetıcs ORCID: 0000-0002-7618-0859

SUSTAINABLE NUTRITION

The idea of "sustainable nutrition," which is derived from sustainable agriculture, aims to reduce waste of natural resources and to produce enough food for seasonal and natural consumption. Sustainability as an idea is nothing new (Qaim, 2017). The Brundtland Commission, formerly known as the World Commission on Environment and Development, coined the terms "sustainability" and "sustainable development" in 1983. Sustainable development is defined by the Brundtland Commission as "meeting the needs of the current generation without compromising the ability of future generations to meet their own needs" (Smetana, Bornkessel, & Heinz, 2019).

In the late 1990s, the Conference of the Parties (COP), which oversees the Convention on Biological Diversity (CBD), acknowledged the significance of biodiversity for food safety. The need for sustainable biodiversity use in the fight against malnutrition and hunger, as well as the link between biodiversity and nutrition and nutrients, were both formally acknowledged by the COP in 2004. In 2010 this initiative was combined with sustainable diets after being introduced two years earlier and intersecting with biodiversity for nutrition and nutrients (Burlingame, 2014). Over the course of the past two decades, the idea of sustainable nutrition has progressed further. The Food and Agriculture Organization (FAO) worked hard in 2010 to develop the definition of'sustainable nutrition,' and while it is not universally agreed upon, this is what they came up with: Diets that are sustainable have a low impact on the environment and contribute to the food and nutrition security as well as to living a healthy life for both the current generation and future generations (Durazzo, 2019). Diets that are sustainable protect and show respect for biodiversity and ecosystems; they are also culturally acceptable, easily accessible, economically viable, and cost-effective; nutritionally adequate, safe, and healthy; and they are the diets that make the most efficient use of both natural and human resources (Lairon, 2012). This definition demonstrates that human health and ecosystems are not two separate entities that can be considered independent of one another. For instance, one's health may be contingent upon the affordability of food as well as one's access to food of sufficient quality; alternatively, the quality of food may be contingent upon the land and soil (that is, the environment) in which it is produced (Qaim, 2017). The study of nutrition concentrates primarily on individual nutrients, nutrient deficiencies, food groups, and the effects these have on one's health. Recent years have seen an increased emphasis placed on diets and the effects those diets have on human health, the environment, and food systems (Tobi et al., 2019). A great number of economic, social, cultural, and environmental factors can have an impact on food systems, which also have a high degree of complexity. The relati-

1. INTRODUCTION

Numerous efforts are being made nowadays to develop high-performance materials for electronic skin, soft robotics, and human motion monitoring (Di et al., 2019). A substantial number of electronic materials with high responsiveness and conductivity have been developed by using conductive polymers (polypyrrole, polyaniline) or embedding nanofillers such as carbon nanotubes, graphene, and metallic nanoparticles into polymer networks. Although these materials fulfill the necessary conductivity requirements, their poor biocompatibility, stretchability, and bioadhesion restrict their practical applications (Di et al., 2019; Chen et al., 2021; Wang et al., 2021).

Hydrogels, cross-linked polymer networks containing abundant water, have been intensively investigated for use as electronic sensors because of their stretchability, surface compliance, and biocompatibility (Fan, Wang, & Jin, 2018; Qin, Owyeung, Sonkusale, & Panzer, 2019; Chen et al., 2021). On the other hand, the low mechanical properties and weak electrical conductivity of hydrogels severely limit their use as a matrix for soft sensor applications. Additionally, hydrogels rapidly dehydrate in their natural environment, requiring an additional sealing process for the long-term functionality of hydrogel-based devices. (Qin, Owyeung, Sonkusale, & Panzer, 2019; Chen et al., 2021). Although using ionic liquids (ILs) could be considered an ideal remedy to address these issues, their toxicity and high manufacturing costs prevent them from being widely used (Qin, Owyeung, Sonkusale, & Panzer, 2019). One possible solution to overcome these drawbacks is the use of deep eutectic solvents (DES) for the preparation of hydrogels.

DES are a new subclass of ILs that share physicochemical characteristics like being ionic, having low volatility, and having a moderate level of ionic conductivity. In addition, due to their low cost, high bio-based content, and environmentally friendly nature, DES-based gels have been produced for different types of applications such as wound dressing, water treatment, batteries, and capacitors (Joos et al., 2018; Joos et al., 2020; Gomes, Silva, & Reis, 2019; Wang et al., 2021). Several studies have also indicated that combining biopolymers with DES is a promising approach to obtain biocompatible, stretchable, and conductive gels for health monitoring and electronic skin applications (Wang et al., 2021; Qin, Owyeung, Sonkusale, & Panzer, 2019; Yamagata, Soeda, Ikebe, Yamazaki, & Ishikawa, 2013; Takada & Kadokawa, 2015). Though several biopolymers, such as chitosan, starch, and cellulose, have been used to prepare gels using DES, only a few attempts have been made to produce the gelatin-based DES gels for flexible devices (Qin, Owyeung, Sonkusale, & Panzer, 2019). To the best of my knowledge, no prior studies have detailed the prepara-

CHAPTER 2

RENEWABLE ENERGY RESOURCES AND MITIGATING THE ENERGY CRISIS

Yasin Furkan GORGULU[1]

1 Assistant Prof. Dr., Isparta University of Applied Sciences, Department of Machinery and Metal Technologies, ORCID: 0000-0002-1828-2849, yasingorgulu@isparta.edu.tr

INTRODUCTION

Every facet of development, prosperity, health, nutrition, infrastructure, and education depends on energy. Our civilization depends on energy as one of its fundamental needs, thus its supply should be sufficient and safe (Poudyal, Loskot, Parajuli, & Khadka, 2019). Many development indicators are strongly correlated with the amount of energy consumed per capita. Enhanced global action is also needed to address emissions issues. The most conventional energy source is a fossil fuel, but using it can be dangerous since when economies expand, greenhouse gas emissions rise along with it. The use of fossil fuels also produces a vast amount of harmful waste that affects all other forms of life. There are transitions between energy, water, food, soil, and climate, and they are all interconnected. It can be handled transitions and identify synergies between them thanks to these relationships. Any component that is under pressure will also have an impact on other components. Our natural environment's basic resources energy, water, food, soil, and climate support our quality of life. Globally, there is more competition for these resources, which is made worse by climate change. Enhancing resource usage efficiency will be necessary to ensure resource availability. At the national and international levels, several policies and initiatives are addressed (Ambika et al., 2022; Gorgulu, 2022).

The world's energy need is increasing day by day in parallel with the increase in population and the development of technology. The limited use of fossil fuels and the harms of their use in obtaining energy are driving the world to use alternative energy sources. Although the trend is towards renewable energy sources and less harmful sources, it seems that this has not yet replaced fossil fuels. To achieve this, studies are continuing on new-generation energy production technologies and how to increase the performance of existing energy production resources. Significant decarbonization of the energy system is needed to combat climate change (Ambika et al., 2022; Fawzy, Osman, Doran, & Rooney, 2020; Gorgulu, 2022). However, aspects of the energy system, such as long-term changes in climatic parameters, instability, and extreme weather conditions (Ambika et al., 2022; Field et al., 2014), frequently have an impact on climate change itself. Real global challenges like energy security and climate change are influencing public policy discussions all across the world. Reviewing the literature measuring effects and assessing how this data is utilized to construct models of energy systems is essential in this dynamic field of study that is always evolving. Utilizing many energy sources has always been crucial to the survival of humans and the development of civilization. Prehistoric people relied on food and fire produced from the burning of dry material as their main sources of energy for nearly 500,000 years. Fire was utilized for more than just heating and lighting; it also served as a source of

CHAPTER 3

HEATING MODES OF SOLAR ASSISTED HEAT PUMPS

Kutbay SEZEN[1]

1 Öğr. Gör. Dr.; Alanya Alaaddin Keykubat Üniversitesi Alanya Ticaret ve Sanayi Odası Meslek Yüksekokulu Elektrik ve Enerji Bölümü İklimlendirme ve Soğutma Teknolojisi Programı. kutbaysezen@gmail.com ORCID No: 0000-0003-1018-5793

INTRODUCTION

The energy demand of mankind has increased rapidly with industrialization and the increasing population and urbanization, and unfortunately at the present time, this need is met by 80% non-environmentally friendly fossil resources (Buker, and Riffat, 2016:399). The use of fossil resources poses a threat to sustainable world by causing the rapid depletion of these limited resources, as well as global warming due to high greenhouse gas emissions. According to the International Energy Agency, CO2 emissions from fossil fuel combustion increased 37% from 1990 to 2021, and this increase is projected to reach 42% by 2040 (EIA, 2022). The energy need of buildings accounts for 40% of the world's total energy demand, and heating accounts for at least half of this demand in industrialized countries, depending on climatic conditions. For example, the share of heating in building energy demand is 55% in the USA, 70% in China and 80% in Europe (Cao vd., 2016:198). Heat pumps, which are energy efficient and environmentally friendly heating systems, stand out as suitable systems that can meet the high heating demands of buildings, moreover these systems can be assisted by solar energy with different configurations (Sezen vd., 2021:146362).

In the literature, solar assisted heat pumps (SAHP) are divided into basic classes and subclasses considering their structures. In this study, besides these classifications, the operating modes of SAHP systems are explained and the limitations on the operating conditions of the systems are revealed.

Solar assisted heat pump (SAHP) systems classification

SAHP systems are divided into two basic classes according to whether the heat gained by solar collectors is transferred directly or indirectly to the heat pump refrigerant cycle (Sezen ve Gungor, 2023:424). In indirect expansion solar assisted heat pump (IDX-SAHP) systems, the heat transmitter fluid, which is mostly a water antifreeze solution, provides heat transfer between the collector and the heat pump evaporator. In direct expansion solar assisted heat pump (DX-SAHP) systems, no intermediary is used for the transfer of the heat gained, and the refrigerant circulates in the collector and evaporates directly with the heat taken from the air and the sun. IDX-SAHP systems are subdivided into series, parallel and dual source, depending on their construction and equipment, which allows switching between different heating modes. In DX-SAHP systems, on the other hand, since there is no optional heating mode option, sub classifications are not generally made in the literature. Illustration of operating diagrams of SAHPs are given in Figure 1.

CHAPTER 4

USING 3D PRINTING TECHNOLOGY TO BUILD A LOW-COST PROSTHETIC HAND PROTOTYPE

Alban RAKIPI[1], Olimpjon SHURDI[2]

1 Department of Electronics and Telecommunications, Polytechnic University of Tirana, Albania, arakipi@fti.edu.al
2 Department of Electronics and Telecommunications, Polytechnic University of Tirana, Albania

I. Introduction and Related Works

Adaptive hands that use underactuation and compliance are becoming more popular, according to recent trends [1].

Modern prosthetic limbs are primarily made of sophisticated plastic and carbon fiber, which is one of the most expensive and lightest materials available in terms of both weight and craftsmanship [2]. Technology advancements have made automatic control and operation of electronic components much simpler.

There are three main categories for prosthetic hands [3]), which are: passive prosthetic hand, conventional prosthetic hand (body-powered hand prostheses) and electric prosthetic hand (myoelectric hand prostheses). They are put into practice based on these categories as well as the preferences of the patients, which are determined by their financial and physical capabilities [2].

Three-dimensional (3D) printing is a new technique that can be used to quickly produce affordable prosthetics [4].

A wide range of requested equipment could be delivered on demand with the help of 3D printing in low-income nations, especially when open source designs are used [5].

For models that can accomplish basic functionality, a 3D printer can considerably lower the production cost [6].

In [4] are evaluated all the published designs of openly accessible 3D printed prosthetic hands for their suitability to those with congenital loss of hands or war-related amputation.

The paper [5] presents a methodology to design and manufacture an artificial hand for prosthetic application. The proposed design is a five finger hand with the forearm actuated by under-actuated system composed of tendons and servomotors.

A. Passive prosthetic hand

The passive prosthetic hand has no mobility of any kind and is seen more as a replacement for the lost hand than a functional one. However, it can be used to hold or move non-heavy items. Usually, such implementations are used in case of loss of fingers and the color they get is dependent on the pigment of the hand, in order to make a more realistic appearance.

B. Conventional prosthetic hand

This hand uses a system that is placed on the upper body (harness system). Through this system the control of the hand can be done by moving

CHAPTER 5

CURRENT SITUATION OF RENEWABLE ENERGY UTILIZATION IN TURKEY AND RECOMMENDATIONS FOR FUTURE POLICIES: A CASE STUDY OF YEARS 2030 FOR MALATYA PROVINCE

Ozan AKDAĞ[1]

1 Turkish Electricity Transmission, Malatya, Turkey, ORCID ID: https://orcid.org/

1. A brief overview of renewable energy policies in the world

Energy is one of the most important agenda in the world. Major part of energy production from past to present is provided by nonrenewable energy sources (such as fossil fuels: coal, petroleum, and natural gas). This case leads to environmental disasters and the energy crisis. To prevent these problems, sustainable energy policies should be developed. Sustainable energy means that to meet today's energy demand without destroying the energy demand of future generations. Therefore, the sustainability of the energy supply should be base on increasing the use of renewable energy (Guney, 2019). Today, due to such issues, the tendency towards renewable energy resources is increasing in the world. Renewable energy policies are an agenda topic worldwide. The European Union aims to move to a low carbon economy that will reduce greenhouse gas emissions and minimize dependence on imported petroleum-coal-natural gas to deal with environmental problems (Ayhan, 2006). The European Union targets increasing renewable energy share to 45% in 2030 energy strategy goals (with Fit for 55 package). According to the report held by the International Renewable Energy Agency (IRENA) in 2022, all sectors are expected to increase the total amount of energy generated from renewable energy to 40% (IRENA, 2022). The German government has promised to reduce GHG emissions by 85% by 2050 after nuclear accidents around the world (UBA, 2019). The Government of India has also shared its dream for a long-term renewable energy target of 450 GW by 2030, (Singh et al. 2022) . The Chinese government has announced its greenhouse gas emission targets after 2060. Accordingly, by 2060, China aims to increase its share of renewable energy sources to 100% (or zero greenhouse emissions) (Qui et al., 2021). The Russian government aims to reduce carbon emissions by 70% by 2030 compared to 1990 (Malysheva and Shlyamina, 2021). The Swedish government aims for 100% renewable electricity capacity by 2040 (SRE, 2019). The Nigerian government has stated that it will start to use solar energy efficiency within the framework of sustainable energy policies. Within the framework of the studies, it aims to install a solar power plant of 500 MW in 2025 (Aliyu et al., 2018). The South African government aims for 8400 MW solar electricity capacity by 2030 (Aliyu et al., 2018). The Brazilian government has approved a renewable energy project of 1.5 GW, which will be completed by 2024 (PDE24, 2018). Japan aims to meet its energy from 100% renewable energy plants by 2050 (RIST, 2017). The Iranian government has stated that it will work to achieve zero emissions targets by 2050 (Ghorbani et al., 2020). With these policies for the use of renewable energy in the world, the capacity of renewable energy power plants is increasing every year. The change in the total installed

CHAPTER 6

THE USE OF AFYON-İSCEHİSAR (DOKIMEION) WHITE MARBLE FOR SCULPTURE AND ARCHITECTURAL MATERIALS IN ANCIENT TIMES

Mustafa Yavuz ÇELİK[1]

1 Prof. Dr.ORCID: 0000-0002-9695-7370 Afyon Kocatepe University, Afyon Vocational School, Department of Marble Technology, 03100, Afyonkarahisar, Turkey.

1. INTRODUCTION

The word "marble" reproduces from the Greek "marmaros" and means shine. The current meaning of marble includes all kinds of natural stones with high decorative properties in the stone industry. Petrographically, marble is a carbonate rock transformed due to regional or contact metamorphism. Pure marbles, which contain more than 95% calcite, are usually white. It may contain small amounts of quartz, feldspar, mica, chlorite, and other minerals (Mrozek-Wysocka 2014). Marbles are usually found in the crystalline complex where igneous and regionally metamorphosed rocks. Turkey has many large complex crystal structures that are contained in different colors of marble. Some of these marbles have been produced since ancient times. Nearly all-important antiquity statuary, monumental, religious, and important buildings are made of marble, for this reason, only the trade of marble was common in ancient times (Herz 1988).

Many of the cultural heritages (important buildings and monuments from ancient times) are made of natural stone. Different civilizations used natural stones for decorative purposes in architectural elements, floor and wall facings, sculptures, and sarcophagi in ancient times. Marble has been an important material used in monumental, religious, and important buildings, especially for decorative purposes since ancient times. The most important reason for this preference was especially its aesthetic and technical features. Due to these properties, the high requisition for marble in ancient times triggered the opening of quarries in the Mediterranean region, especially in Italy, Greece, and Western Anatolia (Mrozek-Wysocka 2014; Moropoulou et al. 2019).

In ancient times, vast quantities of marble blocks were produced from Greece and western Anatolia quarries to construct important buildings and monuments. Important marble quarries operated in Greece during these periods can be counted as Thasos, Paros, Naxos, Athens, and Doliana. The important marble quarries west of Turkey are Proconnesus (Marmara Island), Ephesus, and Dokimeion (Iscehisar-Afyon). The marble quarries operated in this period were not limited to these; it is known that many marble quarries with smaller capacities were operated in the Aegean region (Rapp 2009). While the source of ancient marble quarries in Turkey is generally the Menderes Massif (except Proconnesus), there needs to be more information about the quarries in other massifs. The outermost part of the Menderes Massif (200 x 300 km NE-SW) is formed by marbles and low-grade metamorphic schists beneath them. The Menderes Massif contains Denizli, Dokimeion (Afyon), Aphrodisias (Aydın), and Mylasa (Milas) antique marble quarries (Herz 1988).

Dokimeion (İscehisar) marble quarries, which are important marble

1. Introduction

Our era has witnessed great advancements in the treatment of various diseases causing worldwide deaths. To date, while treatment approach- es based on the design and synthesis of chemical ligands have been developed, the discovery of nucleic acid therapeutics with distinct mechanisms has opened a new gate in health sciences (Sridharan & Gogtay, 2016). Today, a great amount of bioengineering efforts are aiming to design efficient nucleic acid therapeutics in both ribonucleic acid (RNA) and deoxyribonucleic acid (DNA) chemistry.

Considering the central dogma phenomenon, three methods named as knock-in describing the targeted expression of genes (Porteus, 2016), knock-down silencing the gene at mRNA level (Porteus, 2016), and knock-out silencing the gene at genomic level (Zuo et al., 2017) have been developed by manipulating of various natural mechanisms. In this scope, natural post-transcriptional regulation mechanisms such as RNA interference (RNAi) (Setten, Rossi, & Han, 2019), and Ribozymes which are special RNA molecules having catalytic activity (Müller, Appel, Balke, Hieronymus, & Nübel, 2016) are manipulated as knock down approaches. Furthermore, other engineered nucleic acid therapeutics such as aptamers (Adachi & Nakamura, 2019), antisense oligonucleotides (ASO) (Rinaldi & Wood, 2018), and deoxyribozymes (Grimpe, 2011) are designed and utilized to inhibit expression of the genes in mRNA level. In addition, gene editing at the genomic level has taken a great step with the discovery of CRISPR/Cas systems which are natural immune mechanisms of microorganisms against viruses (Yuanyuan Xu & Li, 2020). Besides that designing a reprogrammable gene editing system based on the manipulation of CRISPR/Cas mechanism has brought the Nobel Prize to its own inventors, it has become a greatly effective tool for genome editing with its high specificity and efficiency (Portakal, 2023). In addition, while vaccination processes are targeting to introduce antigen molecules to the immune system, DNA and mRNA vaccines are recently developed vaccination approaches (Leitner, Ying, & Restifo, 2007). In particular, mRNA vaccines have come into prominence in the fight with Covid-19 pandemic (Fang et al., 2022).

Despite the efficiency of nucleic acid therapeutics there are many intracellular and extracellular biological barriers that are able to limit the half-life of these therapeutic agents. For instance, recognition as foreign by reticuloendothelial system (RES) and other cells of immunity, exonuclease enzymes and high concentration of salt, sugar, and other ingredients in blood circulation, epithelial and endothelial cell layers such as blood brain barrier (BBB), extracellular matrix structures, undesired electrostatic interactions between negatively charged therapeutics and cell membrane

1. Introduction

Magnesium (Mg) element is a metal that has been frequently found in the literature in recent years. It takes place in all studies where lightness is an important variable. The density of the Mg element is 1.7 g/cm^3. The fact that it has such a low density is the most prominent feature of its preference in studies. Therefore, Mg metal is almost 75% lighter than iron (Fe) when densities are compared. However, as with all elements, it has very low mechanical and corrosive resistance in its pure state. For this reason, it should be used as an alloy (Savitsky & Baton, 1952; Zeytin, 1999; Furuya vd., 2000; Mordike & Ebert, 2001; Kainer & Von Buch, 2003).

Mg element, like other metals, cannot meet many expected properties in its pure state. In this process, alloys can be obtained with additional metals added to the Mg element. Alloys can generally be applied within the framework of Hume-Rothery rules. In the case of Mg alloying, it is most successfully used with metals such as aluminum (Al), zinc (Zn), silicon (Si) and calcium (Ca). Mg alloys formed by the addition of other elements gain serious improvements in many parameters. For example, a Mg alloy supported with Al and Zn can give successful results in terms of mechanical and corrosiveness. A Mg alloy produced by the addition of Ca can show increased biocompatibility. In addition to these elements, many metals and rare earth elements give many properties to Mg metal (Froes vd., 1998; Friedrich & Schumann, 2001; Menahem Bamberger & Dehm, 2008; Jiang vd., 2011).

Mg alloys are not named according to the names of the elements, but with the abbreviations specified in the standard. This nomenclature consists of letters and numbers. A notation is used with the letter A for Al, Z for Zn, X for Ca and S for Si. Afterwards, the figures that indicate the weight % ratio are listed. For example, it is stated that while there is 9% Al by weight in the AS92 alloy, there is 2% Si (Jiang vd., 2011; Sun & Ahlatci, 2011; Xu vd., 2011; Kulkarni vd., 2012).

The mechanical, corrosive, bio, physical and tribological properties of Mg alloys are among the many cited studies in the literature. For this reason, serious projects are being produced every day on the different properties of this light element. Many production methods such as welding, coating, spraying, melting, casting and rolling of Mg alloys are frequently used. In casting systems, which is the main production method, Mg alloys can only be produced with special equipment. High oxygen affinity is the most dangerous element for Mg alloy in all production methods (Menahem Bamberger & Dehm, 2008; Zheng vd., 2011; M Bamberger, 2013).

For this reason, Mg alloys are produced in almost all production methods in a vacuum or a controlled atmosphere. In general, oxygen-free pro-

CHAPTER 9

TURKEY'S RENEWABLE ENERGY POLICIES IN DEVELOPMENT PLANS, LAWS AND REGULATIONS

Fatih Selim BAYRAKTAR[1], Ramazan KÖSE[2]

1 Research Assistant, Mechanical Engineering, Simav Faculty of Technology, Kütahya Dumlupınar University, Kütahya, Turkey, ORCID: 0000-0002-8672-3511

2 Prof. Dr., Mechanical Engineering, Engineering Faculty, Kütahya Dumlupınar University, Kütahya, Turkey, ORCID: 0000-0001-6041-6591

1. INTRODUCTION

Energy and its sustainability are among the most important problems that human beings need to solve. Population growth, the desire for a luxurious life, financial gain, mobility and communication, and the increasing number of people reaching materials and technology to meet these needs have brought with it the increasing energy demand and intense efforts to meet this demand.

Energy is one of the factors that reflect the social, cultural and economic development of a country. In the absence of domestic technology; If the energy supply is based on imported energy sources rather than domestic and renewable energy sources, energy may harm rather than contribute to social and economic development. Due to intense foreign dependency, increasing energy bills, disruptions and problems in energy supply, energy can become a source of problems for the security of the country and one of the most important obstacles to development and independence. Due to such reasons, it is necessary to work intensively to first define, design, construct, develop and then implement domestic and national energy policies and programs that aim to protect and develop the interests of the society.

In this study, first, the political steps taken to support renewable energy in our country are explained. Then, to understand the effectiveness of the steps taken and to make comparisons, the energy production data in Turkey and in the world between the years 2005-2021 were examined. In the conclusion and recommendations section, a general evaluation has been made and suggestions have been made to make renewable energy more effective in Turkey.

2. RENEWABLE ENERGY POLICIES IN TURKEY

2.1. Development Plans

Table 1: Renewable Energy in Development Plans.

Dev. Plan	Sections on Renewable Energy
1st D. P. 1963-1967 (Devlet Planlama Teşkilatı [DPT], 1963)	- Only in the 2/h subsection of the Measures Subsection, it was requested to test biogas facilities near state farms in areas with agricultural centers.
2nd D. P. 1968-1972 (DPT, 1967)	- Renewable energy was not mentioned.
3rd D. P. 1973-1977 (DPT, 1972)	- To correct the thermal/hydraulic balance deteriorated against hydraulics planned. - Geothermal, one of the renewable energy sources, will start to be used in Turkey.
4th D. P. 1979-1983 (DPT, 1979)	- The share of hydraulic energy production in total energy production remained at 12.8% despite the Keban Dam. - Research and development studies for the utilize of alternative sources and solar energy have gained great importance in this plan.

CHAPTER 10

INDUSTRY 5.0: A STUDY ON SUPPORTING TECHNOLOGY SYSTEMS, APPLICATIONS, AND FUTURE DIRECTIONS

A. F. M. Shahen SHAH[1],
Muhammet Ali KARABULUT[2]

1 Asst. Prof. Dr. Yildiz Technical University ORCID: 0000-0002-3133-6557
2 Asst. Prof. Dr. Kafkas University ORCID: 0000-0002-2080-5485

1. Introduction

Next-generation wireless networks that are intelligent, resilient, and dependable are expected to serve as a technological enabler for meeting the various communication and computation needs of Industry 5.0 services and applications (Ji, 2021), which are built on the foundation of three key concepts: sustainability, resilience, and human-centered industry (Maddikunta, 2021). Increased manufacturing output while fewer interruptions and disaster situations are examples of resilience. Sustainability primarily tackles environmental issues, such as energy conservation and resource recycling. Human interests and requirements are put at the center of the manufacturing process, including customization and computer contact, according to the human-centric strategy.

The industrial sector is focused on mitigating negative effects to successfully handle trash and lessen its effects on the ecology in response to the fast rise in environmental contamination brought on by Industry 2.0. Nothing about Industry 4.0 protects the earth. The next industrial transformation has thus been sparked by the need for a technical answer to provide production processes that are pollution-free (Nahavandi, 2019). By decreasing garbage production through the bioeconomy, which creates a pollution-free atmosphere, Industry 5.0 guarantees the viability of society. With the help of technology that allows machines to share and work alongside humans, the fifth industrial revolution (Industry 5.0) has placed a strong emphasis on intelligent manufacturing. With the help of robots and the return of people to manufacturing halls, Industry 5.0 is employing human intellect and ingenuity in intelligent processes. Without worrying about their jobs, people will cooperate and share with the machines, creating value-added services.

By combining several technologies, including artificial intelligence (AI), cloud computing, Internet of Things (IoT), cognitive computing, and cyber-physical systems (CPSs), the Industry 4.0 standard has completely transformed the industrial sector. Making the industrial sector "smart" by linking machinery and other devices that can communicate with one another and manage one another throughout their lifetimes is the primary idea behind Industry 4.0 (Xu, 2020; Li, 2018). Process mechanization is given top precedence in Industry 4.0, which reduces the need for human involvement in the production procedure (Lasi, 2014; Priya, 2021). Industry 4.0 aims to increase overall performance and output by implementing machine learning (ML) to provide understanding between devices and apps (Azeem, 2021; Zhang, 2020). Industry 5.0 is currently being intended as a way to combine strong, clever, and precise technology with the distinctive ingenuity of human specialists. Many technological futurists think that Industry 5.0 will give production one more personal touch (Nahavandi,

CHAPTER 11

THE INVESTIGATION OF CAPILLARY WATER ABSORPTION ON UNTREATED AND TREATED POROUS NATURAL BUILDING STONES UNDER DIFFERENT WATER CONDITIONS

Mustafa Yavuz ÇELİK[1]

1 Prof. Dr. ORCID: 0000-0002-9695-7370 Afyon Kocatepe University, Afyon Vocational School, Department of Marble Technology, 03100, Afyonkarahisar, Turkey.

1. INTRODUCTION

One of the most important reasons for using natural building blocks by all civilizations for thousands of years is that they can withstand atmospheric effects. Volcanic rocks such as trachyte, basalt, andesite, and tuff have been used in most of the historical structures that have survived in the Afyonkarahisar region. These building stones were used to construct many historical and monumental structures (fountains, bridges, caravanserais, baths, and mosques) that have survived to the present day in the Afyonkarahisar region. Additionally, many churches, tombs, and settlement areas are carved into easily excavated tuff rocks in the Ayazini region. These historical structures are damaged over time because the tuffs are very porous and have a high-water absorption capacity (Figure 1).

The natural building stone may cause weathering problems on exposure to rain and chemical pollutants in the air. The weathering of stones is a complex process, usually caused by atmospheric effects (sunlight, rain, wind, and freeze/thaw). All these weathering types are associated with the pore system of the stone and, therefore, the presence of absorbed water. Salt crystallization, one of the most effective decay factors, results in the stress of volume expansion in the crystal phase when the saline solutions absorbed or contained in the stone reach the degree of saturation within the pores. Thus, the deterioration process begins (Rodriguez-Navarro and Doehne 1999; Cnudde et al. 2004). Deterioration in historical buildings can be more destructive due to capillary water absorption, which allows salt water to penetrate the building stones. It is known that the most destructive salts that cause damage to historical buildings are sodium chloride and sodium sulfate, which can be found in the water absorbed by the material (Rodriguez-Navarro and Doehne 1999; Benavente et al. 2001). It is considered that the factor that causes the building blocks to break down over time is the stress that occurs due to the crystallization of salts within the pores (Clifton 1980).

CHAPTER 12

THE PLACE OF SMALL ORGANIC MOLECULES IN FLUORESCENT SENSOR SYSTEMS

Merve ZURNACI[1]

1 Kastamonu University, Central Research Laboratory, Kastamonu, TURKEY Orcid id: https://orcid.org/0000-0002-2928-3492 e-mail: mzurnaci@kastamonu.edu.tr

Introduction

F. Goppelsröder described the first fluorescent chemosensor to measure aluminum ion (Al^{3+}) in 1867 (Czarnik, 1993). Upon this, a lot of research has been done on sensor technology and these researches have gained speed day by day. Most of these research are related to the materials as sensors and their application areas (Gambhire, Labhade, & Kale, n.d.). Among the materials as sensors, fluorescent organic materials draw attention with their strong emission properties and properties (Doan, Pitter, Kocher, Wilson, & Goodson, 2015; Zhu, Li, Zhu, & Huang, 2022). In particular, many fluorescent organic materials are designed for use in sensors (Dikmen, Turhan, Yaman, & Bütün, 2021; Lee, Kim, & Sessler, 2015; J. Wang, Yuan, Hu, Xu, & Xue, 2016).

Organic materials are often encountered in sensor technology as heterocyclic compounds (especially with the dense π conjugate system) (C. Wang, Dong, Hu, Liu, & Zhu, 2012). On the other hand, nitrogen-containing heterocycles come to the fore in sensor applications because they play an essential role in the preparation of transition metal complexes and change the electronic properties of the molecule based on the acidity of the –NH proton (Batista, Costa, & Raposo, 2014). Developed for various anions and cations, these organic materials have attracted great interest due to their applications in the environment, chemistry, biology and medicine (Shin, Teresa Gutierrez-Wing, & Choi, 2021). Designing a fluorescent sensor for a cation or anion requires an acceptor unit that interacts selectively with the cation or anion (Lee et al., 2015). Many small organic molecules have been designed for sensing, imaging and biomedical applications (Yang et al., 2022).

Photophysical properties (brightness, photostability, wavelength range), electrochemical properties and biochemical properties of organic compounds are important parameters in the sensor's design (Kiran, Hogan, James, & Wilson, 2011). Especially in the development of anion sensors, −NH and −OH groups are important in the formation of hydrogen/halogen bonds (Chudzinski, McClary, & Taylor, 2011). It is recognized molecularly through interaction with, In addition, the distance between −NH and −OH groups effectively changes the fluorescence (González-Ruiz et al., 2022).

Fluorescent sensors generally consist of 3 parts: a receptor (ionophore), a fluorophore (signal moiety) and a chelator (S, Sam, George, N, & Varghese, 2021) (Figure 1). The general skeletal structure of small organic molecules used in sensors is shown in Figure 2. The sensor properties of these molecules, derived by the binding of different groups, have been studied in detail in the literature (Cano, Alvarez, & Giraldo, 2019; Pesavento, Marchetti, De Maria, Zeni, & Cennamo, 2019).

CHAPTER 13

ADVANCED HYDROGEN PRODUCTION FROM BIOGAS: A COMPREHENSIVE OVERVIEW

Mehmet Ali BİBERCİ[1]

1 Assistant Prof. Dr. University of Çankırı Karatekin, Engineering Faculty, Department of Mechanical Engineering, m.alibiberci@karatekin.edu.tr, ORCID ID: 0000-0002-0328-9538

1. INTRODUCTION

Hydrogen has the potential to replace fossil fuels in a variety of applications, including transportation, heating, and power generation [1, 2]. However, vast majority of hydrogen produced today is derived from fossil fuels, mostly natural gas, via steam methane reforming [3]. This process is energy-intensive and emits substantial volumes of carbon dioxide, which contributes to global warming. Thus, it is necessary to find ecologically benign and more sustainable alternatives for hydrogen production [4]. Hydrogen is an energy carrier that can be utilized as a fuel in a variety of applications, including fuel cells, internal combustion engines, and industrial operations [5]. Hydrogen provides various advantages over traditional fuels, including zero emissions, high energy density, and adaptability [6]. However, hydrogen cannot be created from fundamental energy sources, such as fossil fuels or renewable energy. (In Figure 1) [7]. Hydrogen is typically produced from fossil fuels, such as natural gas, however this approach is not sustainable and releases greenhouse gases [8]. Therefore, the production of hydrogen from renewable sources, such as biogas, has been investigated as an option that is both sustainable and environmentally beneficial [9]. Producing hydrogen from biogas, a mixture of methane and carbon dioxide produced from organic waste such as agricultural and food waste, sewage sludge, and landfill gas, is one viable way [10]. Many technologies and processes, including biogas reforming, partial oxidation, and biological approaches, can convert biogas to hydrogen [11]. This paper focuses on biogas reforming, which is the most widely studied and commercially available method for hydrogen production from biogas.

Exploration of diverse renewable energy sources, such as biogas, has been spurred by the rising global demand for clean and sustainable energy [12]. Biogas is a mixture of gases created by the anaerobic digestion of organic materials like agricultural waste, food waste, and sewage sludge [13]. Biogas mainly consists of methane (CH_4) and carbon dioxide (CO_2), but it also contains trace amounts of other gases, such as hydrogen (H_2), nitrogen (N_2), and hydrogen sulfide (H_2S) [14]. Particularly in the transportation and industrial sectors, the production of hydrogen from biogas has attracted interest as a possible method of producing sustainable and environmentally friendly energy [15]. The aim of this book chapter is to provide a comprehensive overview of the recent advancements in biogas reforming to produce hydrogen. This chapter will discuss the various technologies available for hydrogen production from biogas, the advantages and disadvantages of each technology, and the future prospects of biogas reforming for hydrogen production.

CHAPTER 14

MECHANICAL PROPERTIES OF CARBON NANOTUBE MODIFIED LAMINATED COMPOSITE MATERIALS

Sakine KIRATLI[1]

1 Assis. Prof. Dr., Çankırı Karatekin University, Faculty of Engineering, Department of Mechanical Engineering, 18100, Çankırı, Turkey. skiratli@karatekin.edu.tr, ORCID:0000-0001-6292-5605.

1. Introduction

Composites, which have been used since ancient times, have become popular materials for all kinds of sectors with the development of science and technology. The reason why they are used in many sectors such as aviation, automotive, marine, food, construction, etc. is that they have superior properties such as lightness, high strength, and high rigidity. In addition to these, many other properties such as mechanical strength, abrasion resistance, corrosion resistance, thermal resistance, electrical conductivity, thermal conductivity, and acoustic conductivity can be listed (Şahin, 2006).

Composite material is the combination of two or more materials at a macro level in such a way that they do not dissolve in each other (Kaw, 2005). The purpose of creating a composite material is to meet the requirements by gathering the properties of each material that makes up a single material. Composites consist of two basic components: fiber and matrix. It generally acts as a fiber carrier and matrix binder (Şahin, 2006). Glass, carbon, and aramid fibers are used as fiber materials. As matrix materials, epoxy, polyester, polyamide, etc. from the polymer group are preferred.

Today, studies are still continuing to further develop these materials and increase their usage. In particular, research focuses on the development of the fiber-matrix interface. Weak interface bonding reduces the expected properties of the composite. One of the studies carried out in recent years involves the addition of various nanoparticles into the matrix. The aim here is to reduce the brittleness of the matrix and thus increase the functionality of the composite.

Among the nanoparticles used, nanotubes take first place due to their superior properties. Studies have shown that polymer composites improve mechanical properties at low carbon nanotube amounts (Kumar et al. 2021). However, there are many different factors that contribute to the development of features. The most important of these is the homogeneous dispersion of the nanotube in the matrix. Appropriate mixing methods should be chosen as nanotubes tend to clump easily. Poor dispersion in the matrix prevents good interfacial adhesion and leads to reduced properties. Commonly used mixing methods are magnetic stirring, mechanical mixing, ultrasonic bath, ultrasonic homogenizer, etc. In addition, surface modifications are made chemically on nanotubes with molecules such as NH_2 and COOH (Cha et al. 2019). This process improves the interface interaction between the nanotube and the matrix by reducing the agglomeration tendency (Rahman et al. 2013).

The primary objective of this research is to investigate the effects of CNTs on the mechanical properties of laminated composites. The specific objectives are:

CHAPTER 15

SURVEY AND ONE-DIMENSIONAL STAKE-OUT OF BUILDINGS

Mehmet EREN[1]

1 Lecturer Dr. Mehmet EREN, Yıldız Technical University, Faculty of Civil Engineering, Department of Geomatic Engineering, https://orcid.org/0000-0002-8370-8615

1-INTRODUCTION

For cultural heritages (such as castles, inns, baths, aqueducts, and historical buildings) to be kept alive and revived in case of damage, the information on these structures should be documented. According to Article 3 of the Venice Charter (1964), "The intention in conserving and restoring monuments is to safeguard them no less as works of art than as historical evidence." defines as (Icomos, 1964). In the first applications of the surveying process, it was used as a base for restoration or reconstruction works to keep the cultural heritage alive and in documentation studies.

In recent years, it has increased the number and size of modern structures built due to technological advances. In order to beautify the appearance of these gigantic structures built for prestige purposes, exterior cladding applications are made by using different coating materials. On the other hand, external cladding systems are also used because they provide benefits such as preventing heat loss of buildings (heat insulation), reducing energy costs, and adding aesthetics to buildings. Mechanical exterior cladding systems are formed by covering the grid-shaped spaces between the carrier vertical elements and horizontal profiles mounted on the structure with panels such as granite, metal, marble, composite, or glass (Figure 1). It allows sound and heat insulation with the help of the material placed in the gaps between the cladding and the building facade. Curtain wall systems are defined by İrtem and Tığ (2006) as multi-purpose structural elements that perform different insulation functions by acting as a filter between indoor and outdoor environments (İrtem E. et al., 2006). Çetinel (2012) calculated that when the indoor-outdoor temperature difference is maximum in January, it provides fuel savings of up to 17%, depending on the type of material used (ÇETİNEL E., 2012).

Figure 1. The application section is to be covered with artificial granite material.

The purpose of the survey measurements of buildings in exterior cladding applications is to optimize the labor cost by determining the

INTRODUCTİON

With the technological advances experienced today, learning environments are enriched and the integration of technology into education is increasing. Technology offers multimedia environments that appeal to many senses, and it is accepted that the inclusion of senses in learning environments strengthens learning (Erbaş & Demirer, 2014). In line with this situation,using technological tools in learning process is important for the new generation that growing with technology Because students want to learn their lessons by using technological devices that they can learn with pleasure(Topraklıkoğlu, 2018). Technology, which is an integral part of teaching environments, enables students to think about the problem and interact, thus enabling them to create a unique way of thinking. Parallel to this, the use of interactive boards, dynamic software, web 2.0 tools, multimedia (video, animation, sound, etc.), educational games in learning and teaching environments have become widespread, the technologies have been developed that interaction opportunities are provided to students in concepts and situations that do not have the opportunity to interact, and will facilitate the concretization of abstract concepts. Augmented reality and virtual reality technologies, which have recently gained importance, can be given as examples of these technologies. Augmented Reality (AR) was conceptually introduced by Tom Caudell and emerged as a term used to determine the components of aircraft circuits (Türksoy, 2019). The most accepted definition of AR as a technology that combines the real world and the virtual world was made by Azuma (1997). Tablet computers and smart phones, which are used as an intermediary device in combining the virtual world and the real world, have been effective in increasing the awareness of this technology. It can be said that the Pokemon Go game created by Nintendo, which contributed to the popularization of AR developed for smartphones all over the world, was released in 2016. This technology later began to be used in the medical world, clothing companies, advertisements and as educational material. Unlike virtual reality, AR is isolating people from the outside world (Furht, 2011).

"VR is the technology that enables three-dimensional objects created in the computer environment to interact with technological tools in people's minds in a real environment" (Burdea & Coiffet, 2003). VR first emerged in 1962 with a device called Sensorama developed by Heilig (Kock, 2008). Heilig presented users with a separate reality independent of the real world, with sensorama created by combining visual, auditory and tactile elements. The fact that VR devices are large and costly has been a problem in their widespread use. With the development of technology, low-cost Google cardboard (VR glasses) etc., developed by Google in the mid-2000s. increased recognition with the help of devices. Although it is

1. Introduction

In our world, which has now entered the 21st century, population growth is accelerating, technology is gradually advancing, and human development is becoming increasingly vital. Education is one of the most crucial determinants of human development. On the other hand, education brings the needs of people and society to the forefront. However, these needs are never static and continue to increase in light of recent developments. To ensure that the education systems and teaching of the twenty-first century leave a lasting mark, it is necessary to organize the systems and environments in which individuals exist. For this reason, it has become essential to use student-centered systems and tools in education that integrate technology that can demonstrate student performance by maximizing the use of their cognitive abilities in the learning process (Harris, Marcus, & Mclaren 2001). As a result of this circumstance, the use of Information and Communication Technologies (ICT) in education has increased over the past few years, and this increase has led to changes in student character, needs, and expectations that are consistent with 21st century skills (Ivankovic, Spiranec, & Miljko, 2013). With this shift, the importance of information and communication technologies is emphasized, as the focus in education shifts from learning to teaching. Consequently, individuals who learned to learn were encouraged to think and produce knowledge throughout their lives and began to apply knowledge in novel ways (Erişti, 2010). Similarly, effective teaching requires supporting students in all three learning domains and minimizing learning barriers associated with these domains (Rose & Strangman, 2007; Rose, 2001). In order to accomplish this, the use of ICT tools in inclusive education has become crucial.

The digital story approach, which is one of the ICT tools that enables the creation of an interactive application platform, also enables the organization of an active participation research process. Because, within the framework of the digital story approach, various skills and competencies, such as technology use proficiency, versatile literacy skills, a multicultural perspective, critical thinking skills, problem-solving skills, and the ability to present different points of view, are applied (Lambert, 2007). Therefore, the digital story approach enables researchers to conduct multifaceted, project-based, resource-rich, globally interactive research. Today, digital stories are created by combining current multimedia opportunities that are informative, entertaining, educational, or based on the sharing of experiences (Barret, 2006).

Digital storytelling is the presentation of an original story in a flexible, multi-channel, and imaginative manner by incorporating diverse elements such as illustration, voiceover, and the addition of video content (Robin, 2008). According to another definition, digital storytelling is based on the

CHAPTER 3

APPLICATION OF CLOUD COMPUTING IN THE FIELD OF EDUCATION

Ezgi Pelin YILDIZ[1]

1 Assoc. Prof. Dr. Kafkas University Kazım Karabekir Vocational School of Technical Sciences, Department of Computer Technology Kars Turkey. https://orcid.org/0000-0002-9987-9857 yildizezgipelin@gmail.com

1. Cloud Computing Concept :

Developments in information technologies have led to changes in conventional fixed information processing technologies in the stages of storing, using and converting information into production by individuals and institutions. This situation has led to the emergence of flexible and cost-minimizing technologies. These developments in information technologies have greatly benefited the storage and accessibility of data individually and institutionally and and its preferability in backing up information has increased day by day (Yalcınkaya et al., 2019). In today's technology, it is understood that cloud computing systems, which enable the storage and accessibility of personal or corporate data on the internet by individuals and institutions, will continue to be preferred by more users in the future due to their low cost (Kılıc, 2017).

With the development of technology, economic, social and environmental innovations occur. With these innovations, it becomes a necessity for individuals and businesses to keep up with these innovations (Celik et al., 2021). One of these innovations is Cloud Computing. When the literature is examined, different definitions of the concept of Cloud Computing are reached. Cloud computing is a great alternative to create effective information systems without the need to allocate large budgets for infrastructure installation and maintenance (Ercan, 2010). According to Gol (2020), cloud computing is technologies enables all kinds of files such as pictures, documents, music to be uploaded to the cloud and accessed via the internet whenever needed, by using cloud services. In the cloud computing model, the infrastructure established and managed by cloud service providers is leased to individuals and organizations with the "pay-as-you-go" model, and users can work completely target-oriented without any infrastructure concerns. Cloud computing is used in the IT infrastructure that are provided the services to the customer through the internet. It gives the low cost environment for the end user. It is a storage device to stored and maintain the data and application. (Rajeswari & Mohammad, 2019).

Cloud computing technology offers a pay-as-you-go method. Via this method, users pay as much as they use by doing the transactions they want over the internet. In addition to these, cloud computing can quickly deploy the IT service and scale the IT service as needed. While doing these, these technologies provide the opportunity to use the services at very low prices with the logic of pay as you use them (Alsabak, 2020). In this way, service disruptions can be prevented and the vast majority of infrastructure is prevented from being idle even when expectations fall. It can describe the cloud information platform as Google Cloud, which delivers the server infrastructure services used by search engines such as Google, Bing, Yandex, Yahoo and sites such as YouTube to the end user.

CHAPTER 4

PEDAGOGICAL PROFESSIONALISM

Muborak Salaeva SABUROVNA[1]

1 Professor of Tashkent State Pedagogical University named after Nizami

INTRODUCTION

Developing pedagogical professionalism has always been one of the major problems of the given period. However, it is getting more and more attention because of the variety of requirements imposed by the government and society in current conditions and their variance with currently existing educational process in the educational system.

According to the axiological aspect, professionalism is of the same value to both a person and society, as it is impossible to form them as a mature staff without taking into account the connection of the characteristics of this activity with the integrated system in ensuring the preparation of future specialists for the relevant professional activity. This, definitely, can be ensured by the joint implementation of science and practice.

From this point of view, in the content of this monograph, we consider the factors that determine the formation and development of future pedagogues' professionalism in the process of pedagogical practice in the system of professional pedagogical training.

A number of scientific studies have been carried out today by local and foreign scientists on the problem of pedagogical professionalism in the fields of psychology, pedagogy, sociology and other disciplines.

The theoretical foundations of the formation of pedagogical professionalism in the conditions of higher education were conducted in the scientific school of the leading Russian pedagogue Vitaly Aleksandrovich Slastenin within the framework of fundamental projects. It mainly covers the unique areas of research devoted to a wide range of problems related to higher education pedagogy, continuous pedagogical education, professional motivation and its expansion, dynamics of professional development of a teacher and changes in the content of his activity, professional development, self-awareness as a professional.

Today, we face very complex social relations in the teaching profession that show contradictory trends. On the one hand, there are many complaints against teachers, who are responsible for most of the educational problems, according to the results of official evaluations by the state and private evaluations by society. On the other hand, teaching as a social group is more trusted by the population than other professions.

At this point, it is worth noting that in 2010 research conducted by the All-Russian Public Opinion Research Center found that among four selected social professions (journalist, teacher, doctor and military officer), teachers are the most reliable. 68% of the respondents stated this. It is of particular importance that respondents under 34 years of age, and not older people, trust teachers more than others.

CHAPTER 5

FAMILY PEDAGOGY-AS A SCIENCE

Salaeva Mukhabbat SABUROVNA[1]

1 Professor of Urgench State University. Uzbekistan. Doctor of Pedagogical Sciences

The goals and objectives of the subject of family pedagogy. The role of family and society in the upbringing of a perfect person based on its continuity in upbringing, continuity, is a holistic legal process. Family pedagogy serves in the perfect fulfillment of the priority tasks of society in the field of individual education in an important state policy, education and education is the activity of the parents who test and put into practice the procedures and rules for commonly raising children.

Family pedagogy is a teaching discipline to be able to work on oneself, to apply selected motor methods and see the result, and to have the art of upbringing.

Family pedagogy follows:

* applies to the modern level of demand and educational laws of Education;

* The content of upbringing in the family;

* methods and tools used in raising children in the family;

* The combination of raising children in the family with the spiritual development of humanity;

* vs. following the skills and culture of raising children in the family.

The purpose of family pedagogy:

• focuses on the study of the state, and laws of problems related to family education.

The tasks of family education are as follows:

1. Solving problems related to family education.

2. Raising a perfect person who meets the priority requirements of the state in increasing the effectiveness of Family Education.

3. Adherence to pedagogical principles in the appropriate use of national values in family education.

4. The use of achievements of Science and technology in family education.

5. Study of advanced successful work experiences in families.

6. Formation of cooperation of parents with pedagogical specialists.

The connection of family pedagogy with other sciences. More than a dozen disciplines are engaged in the study of various aspects of the family, including pedagogy, psychology, medicine, ethnography, population studies, demography, social geography, sociology, economic science, statistics, jurisprudence, history of pedagogy, social pedagogy, pedagogical

CHAPTER 6

ORGANIZING CONSULTATION SERVICES IN SCHOOLS COLLABORATIVELY

Ömer Faruk KABAKÇI[1]

1 Dr. Öğr. Üy. Bursa Uludağ Üniversitesi, ORCID ID: 0000-0002-6191-1305

1. Introduction

Many professions employ a procedure known as consultation. Consultation is one of the most beneficial helping processes when it comes to schools and the mental health services offered in schools. Through exchanging views, the parties can better understand many topics that might be advantageous to the student and meet their needs. Studies that will be conducted in this sense can be covered under the consultation category. Contrary to a straightforward exchange of ideas, the consultation process is a more methodical, focused, and comprehensive engagement that also includes evaluation.

School-based psychological counselors are able to discuss a student's needs with teachers, family, and administrators. Yet, this procedure may also take the form of providing information and is not always referred to as consultation. These attempts could remain in this way as unplanned ones and yield ineffective results. Yet, psychological counseling and guidance services might be more effective in schools if collaborative consultation studies are purposefully organized.

Discussions that allow for everyone to contribute their personal expertise and experience can present numerous opportunities that can result in the development of collaborative consultation. It is possible to speed up the resolution of issues that have an impact on one another in collaborative settings. It's probable that institutions other than instructors, students, and parents are involved in this dynamic process (Alshalawi, 2019). In addition to the importance given to this issue abroad (Baker et al., 2009; Conroy, et al., 2022; Missouri Center for Career Education, 2015; O'Keefe & Medway, 1997), there are also studies in Turkey (Aslan & Güven, 2019; Kılıç-Özmen & Kabapınar, 2019; Tagay & Sarı, 2012) it is noteworthy that the importance of the issue is increasingly mentioned, with the cooperation aspect coming to the fore. This article examines the position of collaborative consultation among other consultation types, as well as the general definitions of the topic and the skills it necessitates, as well as the specifics of the development and upkeep of this approach, all within the context of expanding the relevant studies.

2. Consultation Concept

In reality, many helpful professions include consulting as a key component. Every profession, depending on conceptual guidance and knowledge base, contributes a distinct perspective to the counseling process, as is widely recognized (Bramlett & Murphy, 1998). According to their status within the educational system, school counselors differ. Seven elements stand out when the roles of school counselors are examined, especially

ÖN SÖZ

Markov rejim değişim modelleri zaman serisi verilerini çözümlemek amacıyla kullanılan ortalamada doğrusal olmayan zaman serisi modellerinden biridir. Model yapısı itibariyle değişkenler arasındaki ilişkileri incelerken farklı rejim dönemlerinin olabileceğini ve bunların zaman içerisinde belli olasılıklarla geçiş yapabileceğini varsaymaktadır. Bu geçişler ve farklı rejim dönemlerine ait değişmeler geleceğe ait çıkarsama yapmak için de kullanılmaktadır. Model, özellikle finansal piyasalardaki (hisse senedi fiyatları, döviz kurları, faiz oranları vb.) hareketliliği yakalamak ve makro ekonomik göstergelerin (enflasyon, işsizlik, büyüme vb.)) konjonktürel dalgalanmalarını analiz etmek amacıyla kullanılsa da farklı sektörlerde (enerji üretim ve tüketim modellerinde, iklim değişikliği ve doğal kaynakların yönetiminde, üretim süreçlerinde) de tercih edilmektedir. Bu anlamda kitapta bu modelin teorik çerçevesine yer verilmiş ve hisse senedi ile döviz kurunu içeren bir uygulama ile modelin işleyiş yapısına değinilmiştir.

Kitap, 2019 yılında savunduğum "Türkiye'de Döviz ve Hisse Senedi Getirileri Arasındaki İlişki: MS-VAR Yaklaşımı" isimli doktora tezimin gözden geçirilmiş ve güncellenmiş son halini içermektedir. Bu bağlamda pek kıymetli tez danışmanım Prof. Dr. Mehmet Sinan TEMURLENK'e, resmi olmasa da ikinci tez danışmanım olarak gördüğüm ve tezin şekillenmesinde büyük emeği olan değerli hocam Prof. Dr. Emrah İsmail ÇEVİK'e sonsuz teşekkürlerimi arz ederim.

Okuyuculara faydalı olması dileğiyle…

Dr. Funda DURGUN

Diyarbakır, 2023

ÖNSÖZ

Bal, tüm dünya tarafından tüketilen ve temel gıda maddeleri arasında gösterilen hayvansal bir üründür. Yüzyıllardır insanlar için temel gıdalardan biri olan, bir şifa kaynağı olarak görülen bal aynı zamanda üretiminin yapıldığı alanın bitki ve toprak özelliklerini, mineral zenginliklerini, çevre kirliliğini vb. özelliklerini görmemizi sağlayacak bir gösterge özelliği taşımaktadır.

Bir arıcılık ürünü olan bal neredeyse tüm dünyada üretilmekte olan temel gıdalardan birisidir. Yapılan araştırmalarda yaklaşık yirmi milyon yıldır arılar tarafından üretilen ve günümüz dünyasında ticarete konu olan bir üründür. Arıların bal üretiminde kullanmış olduğu kaynakların birbirinden çok farklı alanlarda olması ve farklı coğrafyada ve iklim özellikleri taşıyan alanlarda bal üretmeleri nedeniyle elde edilen hiçbir bal diğer ballarla birebir aynı özellikleri taşımamaktadır.
Bu nedenle farklı alanlarda üretilen ballar aroması ve tadı açısından kendine özgü özellikler taşımakta ve farklılıklar ihtiva etmektedir.

Bal sadece temel bir gıda maddesi değil aynı zamanda tarih boyunca tıbbi amaçlı kullanılmış ve halen de kullanılmakta olan bir üründür. Yanık ve yaraların tedavisi, iltihapların tedavisi ve baskılanması maksatlı, cilt ve doku problemlerinde, bazı mide rahatsızlıkları ile bir kısım enfeksiyonlarda anti bakteriyel olarak kullanılabilmektedir Bu çalışmada, Karaman bölgesinde üretilen balların kimyasal özelliklerinin belirlenmesi amaçlanmıştır. Bal numuneleri Karaman merkez ve ilçelerinde faaliyet gösteren üreticilerden temin edilmiştir. Mineral analizleri ICP-OES cihazı; şeker, vitamin, HMF ve antioksidan tayinleri HPLC cihazı ile tayin edilmiştir. Ağır metal analizlerinde yaş yakma metodu kullanılmıştır. Şeker tayininde TS 13356 standardından yararlanılmıştır. Karaman merkez ve 5 ilçesinden alınan numunelerde 25 farklı element, 3 farklı şeker, 6 farklı vitamin değerleri tespit edilmiştir. pH ve asitlik ile HMF konsantrasyonu tayin edilmiştir. Ayrıca antioksidan yapısı belirlenmiştir. Çalışma sonucunda balın insan sağlığı için önemli bir gıda maddesi olduğu teyit edilmiştir. Karaman yöresi ballarının genel kimyasal

yapısı hakkında veriler ortaya çıkarılmıştır. Yapılan analizler sonucu element konsantrasyonu sırasıyla K > Na > Ca > P > Te > Mg > B > Al > Ni > Fe > Zn > Se > Cr > Ti > Be > Mn > Sr > Y > Ba > Hg > Li > Cu > As > Cd > Pb şeklinde ortaya çıkmıştır. Ortalama glukoz, fruktoz ve sakkaroz miktarı sırasıyla% olarak 31.83, 39.34, 1.13 çıkmıştır. Asitlik değerleri serbest, laktonik, ve toplam olarak 18.18, 2.19 ve 20.38 $meq.kg^{-1}$ olarak tespit edilmiştir. Ortalama pH değeri 3.80, HMF miktarı ise 6.34 $mg.kg^{-1}$ olarak belirlenmiş, 2.66 mg/100 g Kateşin ile 0.099 mg/100 g kuersetin ihtiva ettiği görülmüştür. İncelenen ballar, çeşitli açılardan TGK Bal Tebliği (Tebliğ No: 2012/58) ile uyumlu olup olmadığı incelenmiş ve tebliğe aykırılıkları test edilmiştir. Araştırmaya alınan balların kodeks açısından değerlendirmede sakkaroz miktarı, glukoz+fruktoz (G+F) toplamı, fruktoz/glukoz (F/G) oranı, HMF değeri ve toplam asitlik miktarı bakımından söz konusu tebliğe uyumlu olduğu görülmüştür.

ÖN SÖZ

Rekreasyon, insanların serbest zamanlarını keyifli aktivitelerle doldurduğu, dinlenip eğlendiği ve fiziksel, zihinsel veya duygusal ihtiyaçlarını karşıladığı bir kavramı ifade etmektedir. Çok disiplinli bir çalışma alanı olarak karşımıza çıkan rekreasyon kavramı yapısı gereği mekan gözetmeksizin uygulanabilirliği sayesinde serbest zaman aktvitelerine ve rekreasyon kaynaklarına olanilgiyi ve talebi artırmaktadır. Bu talep doğrultusunda modern çağ içerisinde özellikle gelişmiş ülkelerde rekreasyona yönelik yatırımlar yapılarak, katılımın teşvik edildiği politikalar izlenmektedir. Rekreasyon, yerel yönetimlerden kamu kurum ve kuruluşlara, ticari işletmelerden sosyal topluluklara kadar toplumun her kesimine hitap edebilmekte ve kendisine uygulama alanı oluşturabilmektedir. Örnek oluşturabilecek uygulama alanları; turizm rekreasyonu, terapötik rekreasyon, sanayi-işyeri rekreasyonu, ticari rekreasyon, macera rekreasyonu, kampüs rekreasyonu şeklinde belirtilebilir/çoğaltılabilir. Bu eserde ise **"Kampüs Rekreasyonu"** uygulama alanı olarak ele alınmıştır. Üniversite kampüslerini paylaşan tüm bireyler (öğrenciler, akademik ve idari personeller, veliler ve aile üyeleri, ziyaretçiler, mezunlar, misafirler) için kampüs rekreasyonu ihtiyaç doğrultusunda ortaya çıkmış ve her geçen gün popülerliği artan bir çalışma alanı olmuştur. Kampüs rekreasyonuna yönelik aktivitelerinin, sosyal faaliyetlerin, sportif etkinliklerin ve kampüs yaşamı içerisinde yer alan tüm bireyleri kapsayıcı organizasyonların (festivaller, şenlikler vb.) planlanması ve belirli programlar dahilinde yürütülmesi rekreasyon alanındaki uzman kişilerin/liderlerin/akademisyenlerin sorumlulukları arasında gösterilmektedir. Bu sorumluluk duygusuyla hazırladığımız bu çalışma, kampüs rekreasyonunun ülkemizdeki birçok üniversite kampüsünde yaygınlaşması temennisiyle siz okurlara sunduğumuz bir üründür.

Üniversite kampüslerinde gerçekleştirilen rekreasyon uygulamalarına katılımda engel oluşturabilecek unsurların yanında katılımı kolaylaştırabilecek faktörlerin belirlenmesi ve katılımla birlikte elde edilen hazzın/doyumun derecesi de oldukça önemlidir. Bu doğrultada kampüs rekreasyonuna karşı farkındalığın oluşturulması bu bilimsel eserin temel çıkış noktasıdır. Bu noktadan hareketle 3 bölüm şeklinde yazılan bu kitapta serbest zaman ve rekreasyon kavramları üzerinde durularak kampüs rekreasyonu deneysel uygulamalarla açıklanmaya çalışılmıştır. Elde edilen sonuçlar literatürdeki çalışmalarla desteklenerek yorumlanmıştır.

Engin bilgi birikimi ve tecrübeleri ile rekreasyon kavramının anlaşılmasında önemli katkılar sağlayan ve ülkemizde bu alandaki ilk çalışmaları yürüten akademisyenlerden olan Prof. Dr. Hatice ÇAMLIYER bu

eserin oluşmasında, emeği geçen yazardır. Bir diğer yazarımız ise, alana olan hakimiyeti ile ön plana çıkan ve birçok bilimsel yayına imza atan Prof. Dr. Pınar GÜZEL GÜRBÜZ'dür. Değerli hocalarıma huzurlarınızda çok teşekkür eder, şükranlarımı sunarım.

Manisa-2023

Dr. Tolga Beşikçi

Bu kitap, Tolga Beşikçi'nin hazırladığı "Üniversite Kampüslerinde Rekreasyon Uygulamalarının Serbest Zaman Engelleri, Kolaylaştırıcıları ve Doyumu Üzerine Etkileri" isimli doktora tezinden üretilmiştir.

GİRİŞ

İSMAİL NÂKÂM'IN YAŞADIĞI DÖNEME GENEL BİR BAKIŞ

İsmail Nâkâm, önceki asrın devamı niteliğinde eserler ortaya konulan, mahallî tarzın etkilerinin görüldüğü, çoğunlukla tasavvuftan beslenen 19. yüzyılda yaşamıştır. Toplum hayatında Batı tesirinin hissedilmeye başlandığı 19. yüzyılda değişik konularda mesneviler yazılmış; fakat bunlar sayı ve yapı bakımından önceki dönemlerden farklı bir muhteva sunmuştur.[1] Şiirde din, tasavvuf, aşk, rintlik gibi geleneksel konuların yanı sıra ferdiyetçilik, görülen olumsuzlukları hiciv gibi konular da ele alınmıştır.[2] Bu yüzyılda insanı eğitmeyi, terbiye etmeyi amaç edinen dinî-tasavvufî mesneviler ise diğer türlere göre ağırlıkta olmuştur.

Şair Nâkâm'ın yaşadığı Azerbaycan coğrafyasına bakıldığında, 19. yüzyılda yan yana iki edebiyatın yaşadığı görülmektedir. Yüzyılın başlarında Rus istilasının bir sonucu olarak Azerî edebiyatı Kuzey ve Güney Azerbaycan Edebiyatı şeklinde ikiye ayrılmış; kuzeyde Rusların etkisiyle yenilik hareketleri ön plana çıkarken, güneyde klasik gelenek sürdürülmüştür. Ayrıca bu edebiyatın bir kolu da tekkelerde ortaya çıkan tarikat edebiyatı olmuş; Kazak, Karabağ civarında, Güney Azerbaycan'ın birçok yerinde yaygınlaşmıştır. Bu dönemde klasik edebiyat canlı ve güçlü bir konumdayken 1850'lerden sonra gittikçe zayıflamıştır.[3]

Batı medeniyetiyle yakından temasın başlamasıyla birlikte Azerî lehçesi memleketin her tarafında yaygınlaşmış; şairler hem Azerî hem Çağatay lehçesiyle yazmıştır. Nesir sahası genişlemiş, Ermeni şairlerin sayısı artmış, kadın şairler ortaya çıkmış, Batı edebiyatından tercümeler yapılmış ve folklor faaliyetleri canlanmıştır.[4] Fakat yeni edebiyat anlayışları Güney Azerbaycan'da Kuzey bölgesine nazaran oldukça yavaş ilerlemiştir. En çok tercih edilen nazım şeklinin gazel olmasıyla beraber geleneksel şiir anlayışı, konuları daha belirgin konumdadır.[5]

19. yüzyıl Azerbaycan Edebiyatı, hem Doğu'nun hem Batı'nın değerlerini ortak bir noktada sentezleyerek ilerlemeye başlamıştır. Ayrıca ana dille ortaya konulan edebiyatta İslam ve tasavvufî düşünce, millî hususiyet kazanmıştır.[6]

Bir şair ve edebiyatı hakkında bilgi sahibi olmak için öncelikle bulunulan edebî muhite bakmak gerekmektedir. Nâkâm'ın yaşadığı Şeki bölgesi de bu noktada önemlidir. 19. yüzyıl milli edebiyat düşüncesinin

ÖNSÖZ

Son yüzyılda sanayileşme ile birlikte kitle iletişim araçlarının ve sosyal medyanın yaygınlaşması bazı problemleri de beraberinde getirmiştir. Bu problemlerden bazıları gençlerde olumsuz Tanrı algısı, öz güven eksikliği ve umutsuzluğun yaygınlaşmasıdır. İnsanoğlu var olduğundan bu yana sürekli bir öğrenme ve çabalama haliyle hayatını sürdürür. İnsan, temel ihtiyaçlarını öğrenir ve onları karşılamak için gayret eder. İşte insanın bu temel ihtiyaçlarından birisi de inanma ihtiyacıdır. İnanma ihtiyacı insanda doğuştan vardır. Kişi kendi üstünde bir varlığa inanır ve bağlanır. Kişi inandığı ve bağlandığı bu varlığı kendi zihninde tasavvur eder. Tasavvur ettiği bu varlık aynı zamanda onun hem yaşamını hem de hayal dünyasını etkiler. Bu itibarla bireyin Tanrı algısı onun duygu, düşünce ve davranışlarına yön verir. Bu durum özellikle üniversite çağındaki genç bireylerde daha belirgindir. Çünkü üniversite gençliği zihinsel filizlenmenin ortaya çıktığı, ruhsal ve fiziksel açıdan gelişme döneminin olduğu bir evredir.

Birey ve toplum sağlığının önemli bir boyutu olarak kabul edilen öz güven yaşam dönemleri açısından da ele alınmaktadır. Bu konuda yapılan çalışmalarda Tanrı algısının bireyin öz güveni ile anlamlı ve pozitif ilişkiler gösterdiğine yönelik veriler bulunmaktadır. Öz güvenin içerdiği mesajların ve değerler sisteminin hem bireysel hem de sosyal alanda karşılığı bulunmaktadır. Bu mesajlar ve değerler, bireyin kendi özünü fark etmesi, sorumluluk kazanması ve kazandığı bu sorumluluk duygusu ile hayatı üzerinde söz sahibi olması kendini gerçekleştirmesi adına oldukça önemlidir. Özellikle hızla gelişen teknolojik alandaki ilerlemeler, toplumsal kültür ve değerlere zarar vermiştir. Bu durum aynı zamanda insanların ruh sağlıklarını da etkileyerek onların umutsuzluk, çaresizlik, anlamsızlık ve karamsarlıklara kapılmalarına sebep olmuştur. Olumlu Tanrı algısı ve öz güven bireylerin ruh sağlığını koruyucu, iyileştirici ve rehabilite edici fonksiyon üstlenir. Bireye umut ve güven veren Tanrı algısı bir taraftan kendini varoluşsal boşluktan kurtarırken diğer taraftan da umutsuzluğun sebep olduğu acıyı hafifleteceğini söylemek mümkündür.

Bu çalışma iki bölümden oluşmaktadır. İlk bölümde kitabın kavramsal çerçevesine yer verilerek konu ile ilgili kavramlara ve araştırmalara yer verilmiştir. İkinci bölümde ise istatistiksel analizlere yer verilerek sayısal veriler üzerinden bulgular ve yorumlar yapılmıştır. Son olarak ise sonuç ve öneriler kısmı ele alınmıştır.

Önemli bir emeğin ürünü olan bu kitabın ilk aşamasından son aşamasına gelinceye kadar pek çok kişilerin emeği ve katkıları oldu. Başta bu çalışmayı yöneten ve her zaman maddi ve manevi yardımlarını esir-

gemeyen Hocam Sayın Hasan Kayıklık'a, her türlü destek ve yakınlığı gösteren Hocam Sayın Asım Yapıcı'ya, zaman zaman konuyla ilgilenip değerli eleştiri ve tavsiyelerinden yararlandığım bu alandaki Din Psikolojisi hocalarıma, Nevşehir Hacı Bektaş Veli Üniversitesi ilahiyat fakültesi hocalarıma, uygulamaların yapıldığı fakültelerin idarecilerine ve tüm öğrencilere teşekkürü bir borç bilirim.

Ayrıca başta bu çalışmada olmak üzere tüm akademik hayatım boyunca maddi ve manevi önemli katkılarda bulunan eşim Şerife Torduş Pür'e, Babama, anneme, çocuklarım Nehir'e, Bilge'ye ve Mustafa'ya teşekkür ediyorum.

ÖNSÖZ

Sağlık hakkı, bir insan hakkı olarak uluslararası düzenlemelerde yer almaktadır. Sosyal gelişmenin temel öğesi olarak sağlığın yaşam boyunca sürekli ve eşit düzeyde sağlanması ise devletin görevidir. Sağlık hizmetleri alanında yaşanan gelişmeler doğumdan sonra beklenen yaşam süresinin uzamasına neden olmuş bu ise sağlık hizmetlerinin sunumunda kalitenin öneminin daha iyi kavranmasına neden olmuştur. Kaliteli sağlık hizmeti sunulmasında en önemli faktör eğitimli, bilgili ve deneyimli sağlık ekibine sahip olmaktır. Kaliteli bir sağlık hizmeti için, hekim/sağlık çalışanı ve hastanın birlikte birtakım olarak çalışmalarının önemine dikkat çeken Prof. Dr. Nusret Fişek de **"Tek söz devri geçti. Devir orkestra devridir"** diyerek sağlık ekibinin sağlık hizmetlerindeki önemini vurgulamıştır. Buradan yola çıkarak hazırladığımız bu kitap sağlık alanında hizmet sunacak olan öğrenciler ve sağlık profesyonelleri için temel bir kaynak niteliğindedir. Kitapta sistemlere özgü hastalıklarla ilgili temel bilgiler, tanı ve tedavi yöntemleri yer almaktadır.

Kitabın hazırlanmasında emeği geçen tüm yazarlara titiz çalışmaları için teşekkür eder, alana faydalı olması dileğiyle sevgi ve saygılarımı sunarım.

KALP HASTALIKLARI

Doç. Dr. Atıf YOLGÖSTEREN[1]

1 Uludağ Üniversitesi Tıp Fakültesi Kalp ve Damar Cerrahisi AD, Bursa/TÜRKİYE
atif@uludag.edu.tr

1. GİRİŞ

Tüm dünyada ölüm sebeplerinin en başında kalp ile ilgili hastalıklar gelmektedir. Tıptaki tüm gelişmelere rağmen özellikle koroner arter hastalığına bağlı ölümler hala önemli bir halk sağlığı sorunu olmaya devam etmektedir. Kapak hastalıklarına bağlı morbidite ve mortalite oranları yüksek olmakla beraber akut romatizmal ateş tedavisinde ki gelişmeler sayesinde kapak hastalıkları insidansı azalmıştır.

2. KALBİN ANATOMİSİ VE FİZYOLOJİSİ

2.1. Kalbin Genel Yapısı ve Dolaşım Çeşitleri

Kalp, göğüs kafesi içinde (orta mediastende) bulunan, yaklaşık 250-450 gr ağırlığında olan, çizgili kas yapısında bir organdır. Kalbin 3/2'si orta hattın solunda bulunur. Vücuttaki diğer çizgili kaslar istemli hareket ettirilirken kalp kası otonom sinir sisteminin kontrolünde istemsiz çalışır. Kalp dokusu 3 tabakadan meydana gelir; endokard (ventrikül boşluğuna bakan iç tabaka), miyokard (çizgili kastan oluşan orta tabaka) ve epikard (dış tabaka). Kalbin çevresini saran ve perikard adı verilen bir kese vardır. Perikard, visseral ve parietal adında iki tabakadan oluşur. Visseral perikard epikarda yapışıktır. Visseral ve parietal tabakalar arasındaki boşlukta perikard sıvısı bulunur. Normalde miktarı 30-50 cc olan bu sıvı kayganlık sağlayarak kalbin rahat gevşeyip (diyastol fazı) kasılmasına (sistol fazı) izin verir (1).

Kalp dört odacıktan oluşur; sağ atrium-sol atrium ve sağ ventrikül-sol ventrikül. Baş, boyun, üst ekstremiteler ve toraksın venöz kanını toplayan vena kava superior (VCS) ve diğer vücut bölgelerinin venöz kanını toplayan vena kava inferior (VCİ) tüm vücudun venöz kanını sağ atriuma boşaltır. İnspirium (nefes alma) sırasında sağ atrium basıncı VCİ ve VCS basınçlarının altına iner ve sağ atriuma venöz kan akışı sağlanır. Venöz kan sağ atriumdan sağ ventriküle, buradan da pulmoner arter vasıtasıyla akciğerlere iletilir. Akciğerlerde oksijenlenen kan (arteriyel kan) 4 adet pulmoner ven aracılığıyla sol atriuma gelir. Sol atriumdan sol ventriküle geçen arteriyel kan aort aracılığıyla tüm vücuda dağıtılır (Resim 1). Sağ atriuma gelen venöz kanın sağ ventriküle, oradan da pulmoner arterle akciğerlere gidip oksijenlenerek arteriyel kan halinde pulmoner venlerle sol atriuma gelmesine *pulmoner dolaşım* denir. Sol atriumdaki arteriyel kanın sol ventriküle, oradan da aorta yoluyla tüm vücuda dağılması, kanın oksijenini dokulara bırakıp dokulardaki karbondioksit ve artık maddeleri alarak venöz kan halinde sağ atriuma gelmesine ise *sistemik dolaşım* denir.

SOLUNUM SİSTEMİ HASTALIKLARI

Op. Dr. Köksal Yurda EKEN[1]

1 Özel Bursa Medikal Park Hastanesi, Göğüs Cerrahisi Kliniği, Bursa/Türkiye
kyeken@yahoo.com

1.GİRİŞ

Solunum sistemi; burnumuzdan başlayarak akciğerde alveol dediğimiz hava değişim keseciklerinde sonlanan ve havadaki oksijeni alıp kana, kandaki karbondioksiti de havaya ulaştıran bir sistemdir. Vücuttaki tüm hücrelerin oksijen almaya ve oluşan karbondioksitinde dışarıya atılmasına ihtiyacı vardır. Bu sistemin herhangi bir noktasında oluşan bozukluk solunum sistemi hastalıkları olarak adlandırılır. Bu hastalıklar varlığı vücudun hücresel aktivitelerinde bozulmaya sebep olur. Bu bölümde solunum sistemi hastalıklarını, tanılarını, ayırıcı tanılarını, tedavi ve sonuçlarını tartışacağız.

2. SOLUNUM SİSTEMİ HASTALIKLARINDA BELİRTİLER

Solunum sistemi hastalıklarının bulguları ortaktır.

2.1. NEFES DARLIĞI (DISPNE)

İnsan için nefes almak doğal bir olaydır. Hastalanmadan nefes alıp vermemiz bizim için aktif bir olay olarak görülmez. Çeşitli nedenlerle solunum sisteminde oluşan bir bozukluk nefes almamızı zorlaştırır. Akciğer hastalıkları (kronik obsturiktif akciğer hastalığı, amfizem, restiriktif hastalıklar, bronşiektazi) , plevra hastalıkları (plörezi, pnömotoraks, mezotelyoma), kalp yetmezliği, pulmoner emboli, büyük hava yolu tıkanıklıkları (yabancı cisim , trakea tümörleri) gibi nedenlerle oluşur.

Nefes darlığının istirahat yada eforla gelmesi önemlidir. İstirahatta olmayan ancak eforla gelen nefes darlığı (dispne) bir hastalığı işaret ederken, istirahatta olan ancak eforla gelişmeyen dispne organik sebepten değilde genellikle ruhsal sorunlardan gelişir.

Hastanın düz yatamaması ancak oturur vaziyette nefes alabilir olması hali ortopne olarak isimlendirilir ve özellikle kalp yetersizliklerinde ve ileri evre kronik obstüriktif akciğer hastalıklarında gözlenen bir durumdur.

2.2. ÖKSÜRÜK

En sık görülen bulgudur. Çünkü öksürük aslında vücudumuzun önemli bir savunma mekanizmasıdır.

Öksürük devam etme süresine göre;

. Akut (3 haftadan az süren)

.Subakut (3-8 hafta süren)

.Kronik (8 haftadan uzun süren)

Balgamın varlığına göre;

. Balgamlı (yaş, prodüktif)

HİPERTANSİYON KOMPLİKASYONLARI

Dr. Öğr. Üyesi Tezcan PEKER[1]

1 Mudanya Üniversitesi, Medicalpark Hastanesi, Kardiyoloji Bölümü, Bursa/Türkiye
pekertezcan@yahoo.com.tr

GİRİŞ

Hipertansiyon (HT) hem kendisi hem de yol açtığı son-organ hasarları sebebiyle global çapta ölüm ve sağlık problemlerinin en sık nedenlerindendir (1-4). HT'nin sıklığı yaşla beraber artmaktadır (5-7). Esansiyel olabileceği gibi başka nedenlere bağlı olarak yani sekonder nedenle de ortaya çıkabilmektedir. HT hem damarlar üzerinde direkt basınç artışı etkisiyle hem de hiperlipidemi gibi diğer kardiyovasküler risk faktörlerine sinerjistik etki ederek kardiyovasküler ve diğer organ komplikasyonlarını ortaya çıkarır (8-10). Vücudun her yerinde damar sistemi bulunması nedeniyle tüm vücutta etkileri izlenmektedir. HT kalp ve damar sisteminde, beyin, böbrekler, göz gibi organlarda son-organ hasarı oluşturabilir. Hem kardiyovasküler hem de diğer organ hasarının takip edilmesi hastaların ölüm ve sağlık problemleri açısından önemlidir. HT başlıca şu majör sistemlerde komplikasyon oluşturmaktadır:

1- Kalp

2- Koroner Arterler

3- Aort ve Büyük Arterler

4- Böbrek

5- Göz

6- Serebrovasküler Sistem

1-Kalp:

HT'un kalp üzerindeki yan etkilerini temel olarak basınç artışı üzerinden gösterir. Temelde kalbin pompa fonksiyonunun karşısında artmış damar direnci/basıncına bağlı kardiyak etkilenme temel patolojidir. Artmış olan periferik basınca bağlı olarak kalbin ardyükü artar, bu durum kalbin iş yükünü de artırmaktadır. HT'a bağlı olarak uzun süreli kardiyak iş yükü artışı gerçekleşir bu kronik sürecin sonucunda kalbin vücuda kanı dağıtan temel pompa fonksiyonunu gören sol ventrikül (LV) öncelikli olarak myokard kas hipertrofisi ile yanıt verir. Myokard hipertrofisine bağlı olarak LV'nin kas kütlesinde bir artış olur. Artan LV kas hacmine bağlı olarak ventrikül içi hacimde bir azalma saptanır. Var olan sürecin sürekliliği durumunda kas kütlesi artışından sonra gelişen durumda LV diyastol sonu basıncında artma gerçekleşir. Diyastolik basınçta gerçekleşen artmanın sonucunda myokard dokusunda sertleşme gerçekleşir. Bu sertleşmenin sonucu olarak LV'nin kompliyansında azalma ve doluş dinamiklerinde bozulma gerçekleşir. Bu durumun sonucunda LV diyastolik disfonksiyonu gerçekleşir (11-13). LV diyastolik disfonksiyonuna bağlı olarak sol atriyum ve LV arasındaki basınç gradyanında azalma

SİNDİRİM SİSTEMİ

Dr. Öğr. Üyesi Nurgül ASLAN[1]

1 Dicle Üniversitesi, Sağlık Bilimleri Fakültesi Beslenme ve Diyetetik Bölümü, Diyarbakır/Türkiye, nuracar_1986@hotmail.com

Sindirim

Besin maddelerinin karbonhidrat, protein, yağ gibi yapı taşlarına ayrılması sindirim olarak adlandırılmaktadır.

Sindirim olayı mekanik ve kimyasal olarak iki aşamada gerçekleşmektedir;

1. Mekanik Sindirim: Besinlerin sindirim yüzeyini arttırmak için dil, diş ve kaslar yardımı besinlerin küçük parçalara ayrılması olayıdır. Mekanik sindirim insanda ağız ve mide de gerçekleştirilir.

2. Kimyasal Sindirim: Besinlerin enzim ve su kullanılarak hücre zarından geçebilecek yapı taşlarına ayrılması olayıdır. Kimyasal sindirim insanda sırasıyla ağız, mide ve ince bağırsakta gerçekleştirilir (Cheng et al., 2010).

Ağız, yemek borusu, mide, ince ve kalın bağırsaklar insanda gastrointestinal sistemi (GİS) oluşturmaktadır. Sindirime yardımcı organlar ise tükürük bezleri, karaciğer ve pankreastır (Navarre & Pugh, 2002; Perkin & Murray-Lyon, 1998). Gastrointestinal sistem besin öğelerinin sindirilmesinden, işlenmesinden ve sindirilmemiş kalıntıların atılmasından sorumludur. Ağız yardımı ile alınan besinler gastrointestinal sistem boyunca ilerlerken, sindirim salgıları tarafından büyük moleküller küçük moleküllere ayrıştırılır. Gastrointestinal sistem makro ve mikro besin ögelerini, su ve elektrolitlerin emilimini sağlayarak kan dolaşımına katar. Gastrointestinal sistemin organlarını sırasıyla ağız, farinks, özofagus, mide, ince ve kalın bağırsaklar, rektum ve anüs oluşturmaktadır. Dişler, dil, dudak, çene, tükrük bezleri, karaciğer, pankreas ve safra kesesi gastrointestinal sistemin dışında olup sindirim için önemli yapılardır (Cheng et al., 2010; Haraguchi et al., 2006; Perkin & Murray-Lyon, 1998).

SİNDİRİM SİSTEMİ HASTALIKLARI

Özafagus Hastalıkları

Akalazya

Alt özafagus sfinkterinin gevşeme yetersizliği olarak tanımlanan motilite bozukluğudur. Akalazyanın klinik belirtileri; regürjitasyon, disfaji, vücut ağırlığında azalma, göğüste ağrı hissi ve bronkopulmoner komplikasyonlardır. Akalazya özofagus kasının hasarı ile oluşmaktadır. Bu hasarın ise özofagus, mide ve bağırsak kas tabakası içine dağılan otonom sinir hücrelerindeki kaybın neden olduğu düşünülmektedir. Akalazya'nın etiyolojisi bilinmemekle birlikte, bazı tümörler ve viral kaynaklı olabilmektedir (Bayne & Edmondson, 2021). Chagas hastalığı, otonomik ganglionları tahrip edip akalazyaya neden olur. Sindirilmemiş besinle-

ÜROLOJİK HASTALIKLARI

Doç. Dr. Bilsev DEMİR[1]

1 Malatya Turgut Özal Üniversitesi Sağlık Bilimleri Fakültesi, Hemşirelik Bölümü, Malatya/Türkiye, bilsev.demir@ozal.edu.tr

Üroloji, kadınlardaki boşaltım sistemi, erkeklerde üreme-boşaltım sistemiyle uğraşan tıp dalıdır. Ürolojik hastalıkları bilmeden önce üroloji ile ilgili genel semptomları bilmek gerekir.

Hematüri

İdrarda gözle görülebilir bir kanama varlığı makroskopik hematüri, yalnızca mikroskop altında 3'den fazla eritrosit görülmesine ise mikroskopik hematüri denir. Hematüriyi değerlendirirken ilk olarak hastanın hikayesi alınmalıdır. Ürolojik açıdan değerlendirilen durumlar şunlardır (1, 2).

a) Hematüri makroskopik mi mikroskopik mi?

b) Hematüri idrarın hangi kısmında gözleniyor?

c) Eşlik eden ağrı var mı?

d) Miksiyon sırasında pıhtı gözlendi mi?

e) Pıhtıların belirgin şekilleri var mı?

Ağrı

Üriner sistemi ilgilendiren ağrının nedeni genellikle obstrüksiyon veya inflamasyon kaynaklı ikincil oluşur (2).

Renal Kolik

Renal kolik, üriner sistem taş hastalığına bağlı gelişen, ani başlayan şiddetli ağrı ile karakterize acil bir durumdur (2).

Urgency

Ani ve karşı konulamayacak güçteki idrar isteğidir.

Noktüri

Bir kişinin, gece bir veya daha fazla idrar yapmak için uyanmasıdır. Kişinin işeme öncesinde ve sonrasında uyuyor olması gerekmektedir. Noktüri kişinin uyku kalitesinde bozulmalara sebep olabilir.

Dizüri

İnflamasyona sekonder sebep olan ağrılı idrar yapmadır. Yanma veya rahatsızlık hissi şeklinde gelişebilir. Ağrı mesane bölgesinde olmaktan çok üretral meatusda hissedilir.

Obstrüktif Semptomlar

Akış hızında azalma, tutukluk, aralıklı akım, ıkınma, son damlama, işeme sonrası damlama, tam boşaltamama hissi şeklinde görülebilir.

ENDOKRİN SİSTEM HASTALIKLARI

Dr. Öğr. Üyesi Mert KARTAL[1]

1 Malatya Turgut Özal Üniversitesi Sağlık Bilimleri Fakültesi. Battalgazi/Malatya
mert.kartal@ozal.edu.tr

1. ENDOKRİN SİSTEM

Endokrin sistem sinir sistemi ile iç içe çalışmaktadır. Bu iki sistem immün sistem ile etkileşim halindedir. Endokrin sistem sinir sistemi ile birlikte metabolik ve homeostatik aktiviteleri düzenler. Endokrin sistem hipofiz-hipotalamus, tiroid, paratiroid, timüs, böbrek üstü bezleri, pineal bez, pankreas ve gonadlar gibi endorin bezler olarak isimlendirilen doku ve organlardan oluşmaktadır (Hall 2013, s.1088).

2. ENDOKRİN SİSTEM HASTALIKLARI

2.1. Hipofiz Bezi Hastalıkları

2.1.1. Hipopitüitarizm

Hipopitüitarizm hipofiz bezinden salgılanan hormon veya hormonların yetersiz salınımı sonucu ortaya çıkar. Hipofiz bezine bağlı primer işlevsellik, enfeksiyonlar, otoimmün bozukluklar, tümörler, cerrahi veya radyasyon tahribine bağlı olabilir. Bulgular eksik olan hormona göre değişiklik gösterir. En sık görülen anormallik büyüme hormonu (GH) salgısının olmamasıdır. Bunu gonadotropinler, troid stimülan hormon (TSH), Adrenokortikotropik hormon (ACTH), Prolaktin eksiklikleri izler (Türkiye Endokrinoloji ve Metabolizma Derneği (TEMD) Hipofiz Çalışma Grubu, 2019; Emral, 2004). Hipopitüitarizmin erişkin toplumda görülme sıklığı yıllık milyonda 8-10 vakadır. Mortalite oranı sağlıklı bireylere oranla 1.8 kat daha yüksek olduğu görülmüştür (Rosen ve Bengtsson, 1990; Markussis vd.1992; Lehmann vd.1993).

Belirti ve Bulgular: Hipopitüitarizmde klinik bulgular eksik olan hormon ve hormonun eksiklik derecesine göre değişmektedir. Büyüme hormonu eksikliğinde; halsizlik, çabuk yorulma, santral obezite, kas gücü ve egzersiz yapma kapasitesinde azalma, LH ve FSH hormonları eksikliğinde; kadınlarda oligo-amenore, infertilite, meme atrofisi, pubik ve aksilar kıllarda azalma, sıcak basması ve disparonia, erkeklerde libidoda azalma, impotans, infertilite, sıcak basması, sekonder seks karakterlerinde gerileme testislerde yumuşama görülebilir. TSH eksikliğinde; halsizlik, kas güçsüzlüğü, soğuk intoleransı, kabızlık, apati, kilo artışı, deride kurulaşma ve kabalaşma görülür. ACTH eksikliğinde; halsizlik, iştahsızlık, kilo kaybı, bulantı ve kusma, hipoglisemi, apati, pubik ve aksilar kıllarda azalma görülmektedir (Markussis vd. 1992; Lehmann vd. 1993).

Tedavi: Hipopitüitarizmde tedavi nedene yöneliktir. Tümörün radyasyon ya da cerrahi yolla çıkartılması, sürekli eksik bez hormonunun replasmanı ve beslenme tedavisi uygulanır. Tedavi ömür boy süreck şekilde planlanır (Birol 2011; Olgun, Eti Aslan, 2010).

SİNİR SİSTEMİ CERRAHİ HASTALIKLARI

Öğr. Gör. Dr. Nur Pınar AYAZ[1]

1 Hitit Üniversitesi Sağlık Bilimleri Fakültesi. Çorum, nurpinarayaz@hitit.edu.tr

Sinir Sistemi Anatomisi

Sinir sistemi merkezi ve periferik sinir sistemleri olarak ikiye ayrılır. Merkezi sinir sistemi beyin ve omurilikten oluşur. Periferik sinir sistemi, spinal sinirleri ve periferik sinirleri içerir. Karmaşık ve koordineli etkileşimler yoluyla, bu iki kısım motor, duyusal, otonom, bilişsel ve davranış aktivitelerinin hepsinden sorumludur.

Sinir sistemi temelde nöron ve nöroglia olmak üzere iki tip hücreden oluşmaktadır. Bir nöron, çekirdek (hücre gövdesi içinde), bir dendrit (sinyali alan), bir akson (hücrenin bir sonraki sinir hücresine bir uyarıyı iletebilen uzantısı) ve akson terminallerinden (sinyalleri diğer hücrelere iletebilir) oluşmaktadır. İki nöron arasındaki yapısal ve işlevsel bağlantı sinapslar ile sağlanır. Sinaps, bir sinir uyarının bir nörondan diğerine ya da bir nörondan hedef organa iletildiği noktaya verilen isimdir. Sinaptik boşluklarda norotransitterler yapılır ve depolanır. Nörotransmiterler, sinir hücreleri arasındaki iletişimi geliştirmek için presinaptik nöron tarafından salınan kimyasallardır. Postsinaptik nöronda farklı nörotransmitterler için spesifik reseptör bölgeleri vardır. Her bir nörotransmitter yalnızca belirli reseptör bölgelerine uyar. Elektrik yüklü iyonlar, sinyalleri sinir hücrelerinin hücre zarları boyunca iletir. Sinir hücrelerinin dış yüzeyindeki miyelin kaplama, sinir hücreleri boyunca iletimi hızlandırmaya yardımcı olur. Nöronlar vücuttan merkezi sinir sistemine ve merkezi sinir sisteminden vücuda bilgi iletir. Afferent nöronlar, vücudun çevresel bölgelerinden duyusal bilgileri merkezi sinir sistemine taşır. Merkezi sinir sisteminden kaslara veya bezlere bilgi ileten motor nöronlar efferent nöronlardır.

Beyin, kafatası içinde korunur. Beyin serebrum, serebellum ve beyin sapı olarak ayrılır. Serebral korteks sağ ve sol hemisferlere ayrılır. Ayrıca beyin yarım küreleri frontal, parietal, oksipital ve temporal loblara bölünmüştür. Her iki hemisfer birbirine corpus callousum ile birbirine bağlanır. Cerebrumun sağ yarımküresi vücudun sol, sol yarımküresi de vücudun sağ tarafını yönetir. Frontal lob, konuşma artikülasyonunu, davranışı, ahlaki karar vermeyi ve duygusal durumu kontrol eden yani istemli motor hareketlerinden sorumludur. Parietal bölge duyusal uyaranları, ağrıyı ve dokunmayı yorumlar. Temporal lob işitsel, dil yorumlama, hafıza oluşumu ve depolama ile ilgilidir. Oksipital lob, görsel korteksi barındırır. Diensefalon, beynin alt bölümüdür. Serebrumu (beyini) omurilige bağlayan bölümdür ve talamus, hipotalamus ve bazal gangliyonları içerir. Talamus bir aktarma merkezi gibidir. Artan duyusal bilgileri vücuttan serebral korteksin uygun kısmına iletir. Serebral korteksten gelen mesajlar talamustan vücuda iletilir. Hipotalamus, nöroendokrin fonksiyonunu kontrol eder ve vücutta homeostazı korur. Bazal ganglionlar,

KAS İSKELET SİSTEMİ

Dr. Tuğba MÜDÜROĞLU KAYHAN[1], Dr. T. Oğuz KAYHAN[2]

1 Heidekreis klinikum Soltau Ortopedi ve Travmatoloji Bölümü, Almanya, dr.tugbamkayhan@gmail.com
2 Helios Klinikum Hildesheim Kulak Burun Boğaz Bölümü, Almanya

1. GİRİŞ

Türk Dil Kurumu´nun tanımlamasına göre iskelet; "İnsan ve hayvan bedeninin kemik çatısı" olarak betimlenir. (1) Bu kemik doku birbiri arasındaki eklemler, bağ dokusu ve çevresindeki kaslar ile vücuttaki lokomotor sistemi oluşturmaktadır. Ancak hareket için bu oluşumların yansıra sinir ve dolaşım sistemleri de gerekmektedir. Tüm bu oluşumlardan birinin aksaması durumu, beraberinde fonksiyonalite ve/veya kozmetik problemleri meydana getirecektir. Kas ve bağ doku rahatsızlıkları, Romatoloji bölümü içinde incelendiğinden bu bölümde ekseriyetle farklı yaş gruplarındaki hareket ve anatomi bozukluklularına ve bilhassa kemik patolojilerine değinilmeye çalışılmıştır.

Kemik patolojilerinde en sık görülen şikâyet tahmin edilebileceği gibi ağrıdır. Kemikleri çevreleyen soğan zarı inceliğindeki periost adi verilen yapı, kemiklerdeki ağrıya tek duyarlı bölümdür. Bu sebeple kemik kırıkları hareket ettirildikçe periost irritasyonu meydana getireceğinden çoğunlukla hasta tarafından "bıçak saplanması" seklinde bir ağrı tarif edilecektir. Ancak her kırıkta şiddetli bir ağrı olması gerekmediği de unutulmamalıdır. Kırıkların kesin tanısı fizik muayene ile uyumlu radyolojik görüntülemedir. Bazı durumlarda akut dönemde 2 haftaya kadar radyolojik görüntülemede kırık hattı gözden kaçabilir ya da klinik de çok şiddetli görülmeyebilir. (2). Bu durumlarda ilerleyen günlerde fizik muayene ve görüntülemenin tekrarı ya da BT-MR gibi ileri görüntüleme yöntemleri gerekecektir.

2. KAS VE ISKELET SISTEMI HASTALIKLARI

2.1. Çocukluk Çağı Kas ve Kemik Sistemi Hastalıkları

2.1.1. Büyüme Bozuklukları ve Metabolik Hastalıklar

Vücut görüntüsü olarak yaşına göre dış görünüm olarak büyük ya da küçük bir çocuğun değerlendirilmesinde en sık kullanılan yöntem persentil eğrileridir ve bu eğriler belli bir yaş için bir parametrenin standart sapmalarını hesaplamak için kullanılırlar. Genelde bu yöntem bulunulan toplum için özel olarak hesaplanır. Türkiye'de özellikle birinci basamakta çocuk takip ve izlemlerinde de öncelikli olarak bu yöntem kullanılır. Pediatrist Prof. Dr. Olcay Neyzi ve arkadaşları tarafından 2008 yılında yapılan bir araştırma ile Türk çocuklarının vücut ağırlığı, boy uzunluğu, baş çevresi ve vücut kütle indeksi ile ilgili güncel referansları yeniden belirlenmiştir ve aktif olarak kullanılmaktadır. (3)

Bir çocuğun boyunun kısa olduğunu söyleyebilmek için en az 2 eğride standart sapmanın altında kalması gerekmektedir. Eğer 3 veya daha

KULAK BURUN BOĞAZ HASTALIKLARI

Uzm. Fzt. İlker DEMİR[1]

1 İnönü üniversitesi Turgut Özal Tıp Merkezi Fizik Tedavi ve Rehabilitasyon Kliniği, Malatya, fztilkerdemir@gmail.com

DOĞUMSAL KULAK BURUN VE BOĞAZ HASTALIKLARI

Doğumsal Kulak Hastalıkları

Kulak iç, orta ve dış kulak anomaliler olmak üzere 3 bölümden oluşur. Gelişimsel olarak önce iç kulak daha sonra dış kulak yolu ve en sonda orta kulak gelişimini tamamlar (1). Dış kulağın doğumsal anomalisi aurikulada deformiteyle sonuçlanır. Aurikula deformitesi olanlarda çoğunlukla dış kulak kanalı, orta kulak, fasiyal sinir ve az bir olasılık olmasına rağmen iç kulakta da deformite görülebilir (2). Dış kulak hastalıkları konjenital, travmatik, inflamatuar, neoplastik ve karışık gruplara ayrılabilir. Dış kulağın gelişimsel anormallikleri minör veya majör olabilir (3).

Dış kulak doğumsal hastalıklarında mikroti, makroti, anoti, konjenital aural atrezi, preauriküler kist\fistül, auriküler tag, kepçe kulak deformiteleri görülür (1).

Mikroti: Önemli bir gelişimsel anomalidir. Mikrotia derecesi değişebilir. Sıklıkla dış kulak yolu, orta ve iç kulak anomalileri ile birliktedir. Durum tek taraflı veya iki taraflı olabilir. İşitme kaybı sıktır. Fıstık kulağı bir mikrotia şeklidir.

Makroti: Aşırı büyük kulak kepçesidir.

Anoti: Kulak kepçesi ve lobülün tamamen yokluğudur ve genellikle birinci Arc sendromunun bir parçasını oluşturur (4).

Konjenital aural atrezi: Daralmış veya tamamen tıkalı dış kulak yoludur (1).

Preauriküler kist\fistül: Sık görülen bir doğumsal anomalidir. Kulak kepçesinin yüze yapıştığı bölümün önünde yer alır (1). Heliks kabuğunun önünde veya tragusun üzerinde bir çöküntüdür.

Auriküler tag: Tragustan ağız köşesine çizilen bir çizgi üzerinde görünen deri kaplı etiketlerdir. Küçük kıkırdak parçaları içerebilirler (4).

Kepçe kulak: Kulak kepçesi ile mastoid kemik arasında 2 cm'den fazla mesafenin olmasıdır (1).

Doğumsal Burun Hastalıkları

Nazal gliomlar: Benign karakterli, çok sık görülmeyen konjenital tümörlerdir. Bu tümörler embriyolojik gelişimin anormal bir sonucunda gelişir. Bu tümörler genelde sert, gri veya pembe renkli kitleler olarak görülmesiyle birlikte kozmetik deformasyona neden olurlar. Aynı zamanda burun tıkanıklığına da sebep olurlar (5).

GÖZ HASTALIKLARI

Dr. Öğr. Üyesi Emrah ÖZTÜRK[1]
Uzm. Dr. Ersan Ersin DEMİREL[2]

1 Malatya Turgut Özal Üniversitesi, Tıp Fakültesi, Göz Hastalıkları Anabilim Dalı, Battalgazi, Malatya, emrah.ozturk@ozal.edu.tr
2 Malatya Eğitim ve Araştırma Hastanesi

1. GÖZ ANATOMİSİ VE FİZYOLOJİSİ

Göz, orbita boşluğunda bulunan ve görme duyusundan sorumlu organımızdır. Orbita kemik yapıları, göz kapağı ve kirpikler göz küresini dış ortamdan gelebilecek travmalara karşı korur. Göz kapaklarının iç yüzeyi ve göz küresinin kornea dışında dışarıdan görülen yüzeyini örten muköz membrana konjonktiva denir. Göz küresi dıştan içe doğru fibröz, vasküler ve nöral tabaka olmak üzere üç tabakadan oluşur. En dıştaki fibröz tabakanın 1/6 ön bölümünü saydam kornea dokusu, arka 5/6'sını ise opak sklera dokusu oluşturur. Kornea, yaklaşık 11 mm çapındadır ve yüksek kırıcılık indeksi sayesinde dış ortamdan gelen ışınların retinaya odaklanmasında büyük pay sahibidir. Vasküler tabaka, önde göze rengini veren iris, ortada siliyer cisim ve arka kısımda ise koroid dokusundan oluşur. Siliyer cisim aköz humor üretiminden sorumlu iken koroid ise iç yüzeyinde bulunan retina dokusunun beslenmesine katkıda bulunur. En içde bulunan nöral tabaka ise retina dokusundan oluşur. Retina, ışığa duyarlı fotoreseptörler (rod ve koni hücreleri) sayesinde kendisine gelen ışık enerjisini elektrokimyasal enerjiye çevirir. Bu elektrokimyasal enerji göz küresine gözün arka kutup bölgesinden giren optik sinir vasıtasıyla beyne iletilir. Göz küresi tabakaların içinde lens (göz merceği), aköz humor ve vitreus sıvısı bulunur. Lens, iris dokusunu arkasında bulunan bikonveks bir yapıdır. Lens, korneadan sonra ışığı en çok kıran dokudur. Aköz humor ve vitreus sıvısı da ışığın kırılmasına katkıda bulunur (Şekil 1) (1,2).

Şekil 1: Gözün anatomik yapıları

PSİKİYATRİK HASTALIKLAR

Doç. Dr. Aysel AKBENİZ[1]

1 Tarsus Üniversitesi, Sağlık Bilimleri Fakültesi, Hemşirelik Bölümü, Tarsus/ TÜRKİYE, aysel.ozdemir@ozal.edu.tr

Bu bölümde aşağıda yer alan konu başlıkları ele alınacaktır:

1. Psikoz ve İlişkili Bozukluklar
2. Duygudurum Bozuklukları
3. Depresyon Bozuklukları
4. Anksiyete (Kaygı/Endişe) Bozuklukları
5. Çözülme (Disosiyasyon) Bozuklukları
6. Obsesif Kompulsif Bozukluk
7. Bedensel Belirti Bozuklukları/Somatoform Bozukluklar
8. Travma ve Stresörle İlişkili Bozukluklar
9. Yeme Bozuklukları
10. Kişilik Bozuklukları
11. Çocuk ve Ergenlerde Görülen Ruhsal Sorunlar

PSİKOZ VE İLİŞKİLİ BOZUKLUKLAR

1. GİRİŞ

Psikoz, düşünce süreci ve duygulanımın ağır oranda bozulduğu zihin durumunu tanımlamakta kullanılan genel bir psikiyatri terimidir. Genel olarak psikiyatride psikoz ağır ruh hastalığının semptomu olarak kabul edilmekle birlikte tek başına bir teşhis sayılmaz. Her ne kadar sadece belirli bir psikolojik veya fiziksel durumla arasında bağlantı olmasa da, özellikle şizofreni, bipolar bozukluk ve ağır klinik depresyon ile ilişkilendirilmiştir. Aşağıdaki belirtilerle seyreder:

- **Sanrı:** Bir kültür içinde paylaşılmayan, gerçeğe uymayan, mantıklı düşünce ile değiştirilemeyen, direnen bir inanış demektir.

- **Varsanı (Halüsinasyon):** Ortada bir uyaran yok iken bir algının olmasıdır. Örneğin sesler işitmek, hayaller görmek. İşitme, görme, dokunma, koku ve tat varsanıları bulunmaktadır.

- **Dağınık konuşmalar:** Cümleler düzensiz ve anlaşılmazdır. Uydurma, yapma sözcükler kullanılır. Aşırı durumlarda sözcük salatası (enkoherans) halini alabilir.

- **Karmakarışık davranışlar:** Hastanın yaptıklarında hiçbir çizgi görülemez, uğraşıları tamamen yönsüz, amaçsız ve isabetsiz olur. Katatonik davranışlar ise hareketlerin ve eylemlerin anlamsız tekrarlamalarından, kesintili hareketlerden oluşur.

ENFEKSİYON HASTALIKLARI

Dr. Öğr. Üyesi Şirvan Elmas DAL[1]

1 Malatya Turgut Özal Üniversitesi Tıp Fakültesi Enfeksiyon Hastalıkları AD, Malatya/TÜRKİYE, sedal44@hotmail.com

1.VİRAL HASTALIKLAR

1.1. Kızamık

Paramiksoviridae ailesinin *morbillivirus* türünden zarflı ribonükleik asit (RNA) virüsüdür. Ateş, öksürük, nezle, konjoktİvit ve döküntü ile karakterize, oldukça bulaşıcı bir hastalıktır.

1.1.1. Klinik Belirtiler ve Bulgular

Kızamık 4 evreden oluşmaktadır (1). 1. İnkübasyon periyodu, 2. Prodromal hastalık evresi 3. Döküntülü hastalık evresi, 4. İyileşme ve immünite evresi. İnkübasyon periyodu 6-19 gündür (2,3).

1. İnkübasyon periyodunda hastalar genel olarak asemptomatiktir.

2. Prodromal hastalık evresinde tipik olarak iştahsızlık, halsizlik, ateşin arkasından konjuktivit, burun akıntısı, öksürük görülür. Bu dönem genellikle 2-3 gün sürer. Koplik lekeleri bu dönemde görülür ve kızamık için patognomonik kabul edilir. Koplik lekeleri gri beyaz renkte, toplu iğne başı büyüklüğünde, çevresi koyu kırmızı, ağız içinde molar dişler düzeyindedir.

3. Döküntü, yüksek ateş, farenjit ve servikal lenfadenopati vardır. Döküntüler başlangıçta makülopapüler tarzdadır. Alın ve yüzden başlayan giderek gövdeye ve kol ve bacaklara yayılan döküntüler birleşme eğilimi gösterirler. Avuç içleri ve ayak tabanları nadir olarak etkilenir (4,5,2,3).

4. İyileşme ve İmmünite evresi: döküntünün görülmesinden 48 saat sonra başlar. Ateş pik yaptıktan sonra hızlıca düşer. Ateşin devam etmesi sekonder bakteriyel enfeksiyonları düşündürmelidir (4,5,2,3).

1.1.2. Tanı

Akut ve konvelesan dönemde 2-4 hafta aralıkla alınan serum örneklerinde immunglobulin G'de 4 kat artışın gösterilmesi tanı koydurucudur. Dünya Sağlık Örgütü (DSÖ) yüksek oranda görüldüğü ülkelerde standart tanı testi olarak serum immunglobulin M bakılmasını önermektedir (1).

1.1.3. Tedavi

Semptomatik tedavi önerilmektedir. Yatak istirahati, yeterli sıvı alımı, antipiretik kullanımı uygundur. Kızamık teması sonrasında profilaksi için bir kontraendikasyon yoksa ilk 72 saat içinde aşılama yapılmalıdır. Temastan sonra 72 saatten fazla zaman geçmişse 6.güne kadar duyarlı bireylerde intramüsküler immunglobulin kızamık enfeksiyonunu önleyebilir (5,6).

BAĞIŞIKLIK SİSTEMİ HASTALIKLARI

Doç. Dr. Aysel AKBENİZ[1]

1 Tarsus Üniversitesi, Sağlık Bilimleri Fakültesi, Hemşirelik Bölümü, Tarsus/TÜRKİYE, aysel.ozdemir@ozal.edu.tr

1. Bağışıklık Sisteminin Hücresel Elemanları

1.1 Kemik İliği

İmmün sistemin temelini oluşturan lökositlerin yapım yeridir.

1. 2. Beyaz Kan Hücreleri(Lökositler)

İmmün yanıt oluşmasında rol oynayan temel kan hücrelerdir. Dolaşımda yer alan lökositlerin normal sayısı 5-10 bindir. Lökositler üç büyük gruba ayrılır. Bunlar; **granülositler, monositler /makrofajlar** ve **lenfositlerdir.**

1.1.1. Granülositler

Lökositlerin %60-80'nini oluşturur. Yaşam süreleri birkaç saat ya da iki-üç gün gibi kıssadır. Akut enflamasyon veya enfeksiyon durumunda savunma mekanizmasında önemli rol oynarlar. Granülositlerin **nötrofil, eozinofil** ve **bazofil** olmak üzere üç tipi vardır.

- **Nötrofiller:** Lökositlerin %55-70'ni oluşturur. Yabancı madde ya da mikroorganizma saldırısına uğrayan bölgeye ilk ulaşan fagositik hücrelerdir.
- **Eozinofiller**: Lökositlerin %2-5'ni oluşturur. Fagositoz yetenekleri nötrofillerden daha azdır. Daha çok solunum sitemi ve GİS'de bulunurlar.Parazit enfeksiyonlara karşı vücudu korurlar.
- **Bazofiller:** Lökositlerin %0.2'ni oluşturur. Fagositik özelliği olmayan kimyasal madde ve protein salgılayarak akut aşırı duyarlılık ve stres yanıtında rol oynarlar.

1.2. Monositler/Makrofajlar

- Lökositlerin %2-6'sını oluşturur.
- Makrofajlar büyük yabancı partikülleri ve ölü hücreleri fagosite etme yeteneğine sahiptirler.
- Bu grup hücreler; kanda monositler, dokuda makrofajlardır.
- Deri ve subkutan dokudaki makrofajlar histiyositler,
- Karaciğerdekiler kupffer hücreleri,
- Akciğerlerdekiler alveolar makrofajlar,
- merkezi sinir sistemi mikrogliyalardır.

ENFEKSİYON ZİNCİRİ VE BAĞIŞIKLIK

Dr. Öğr. Üyesi Ayten GÜNDÜZ[1]

1 Malatya Turgut Özal Üniversitesi Tıp Fakültesi Mikrobiyoloji AD, Malatya/ TÜRKİYE, ayten.gündüz@ozal.edu.tr

1.ENFEKSİYON HASTALIKLARI VE ÖZELLİKLERİ

1.1. Tanımı:

Bakteri, virüs, mantar ve parazit gibi enfeksiyöz bir ajanın vücuda girip çoğalması "enfeksiyon", bu çoğalmanın birtakım semptomlarla kendini göstermesi ise "enfeksiyon hastalığı" olarak tanımlanmaktadır. Enfeksiyon hastalıkları bütün dünyada en sık görülen hastalık gurubunu oluşturmaktadırlar. Direkt veya dolaylı yollarla insandan insana bulaşabilirler. Büyük bir bölümü uygun tedavilerle tam olarak tedavi edilebilir hastalıklardır.

İnsanoğlu dünya üzerinde var olmaya başladığı günden bu yana çeşitli mikroorganizmalarla sürekli etkileşim içindedir. Aksenik yani mikroorganizmasız tek başına yaşam mümkün değildir. Bulunduğumuz ortamlarda ve vücudumuzda flora elemanı olarak yaşayan pek çok mikroorganizma vardır. Bu mikroorganizmaları tanımak ve karşılıklı etkileşim sonucunda oluşabilecek hastalıkları iyi bilmek gerekmektedir.

1.2. Tarihsel Önemi:

Enfeksiyon hastalıkları insanoğlunun varoluşuyla birlikte başlamış ve hala dünya üzerinde etkisini devam ettirmektedir. Bugün geldiğimiz noktaya bakarak daha uzunca bir süre de devam ettireceğini söyleyebiliriz. Dünya tarihinin şekillenmesinde büyük rol almış olan enfeksiyon hastalıkları zaman zaman bireylerin ve dolayısı ile toplumların sosyal ve ekonomik gelişmelerini kısıtlamıştır. Doğal felaketler ve savaşlar dahil hiçbir güç mikroorganizmaların etkileri kadar insanoğlu üzerinde yıkıcı olmamıştır. Bu güç salgın hastalıklar yaparak zaman zaman toplumları neredeyse yok olmanın eşiğine getirmiş, savaşlar kaybettirmiş, imparatorlukları yok etmiştir. Günümüzde de özellikle ekonomik olarak geri kalmış ülkelerde büyük bir sağlık problemidir. Tüm dünyada özellikle de gelişmemiş ülkelerde solunum ve sindirim sistemi enfeksiyonları sıkılık açısından birinci sıradadır.

Yirminci yüzyılda halk sağlığı ve modern tıp alanındaki gelişmelerle, pek çok bilim adamı enfeksiyon hastalıklarının artık toplumlar için gelecekte problem olmaktan çıkacağını savunmuştur. Birleşik Devletlerin Halk Sağlığı Hizmetleri Birimi Başkanı ve aynı zamanda bir cerrah olan William H. Stewart 1969'da, 'Enfeksiyon hastalıkları meselesini kapatma zamanı gelmiştir' beyanında bulundu. Fakat daha yirmi yıl bile geçmeden AIDS ortaya çıktı ve bu beyanın büyük bir yanılgı olduğu görüldü (1).Enfeksiyon etkenleri kendilerine karşı geliştirilen teknolojiye karşı adaptasyon sağlamış ve gelişen dünyaya bizim gibi ayak uydurmuşlardır. Ayrıca insan ömrünün uzamasının getirdiği immün sistemin zayıflama-

KAN VE KAN HASTALIKLARI

Dr. Öğr. Üyesi Gül DURAL[1]

1 Fırat Üniversitesi,Sağlık Bilimleri Fakültesi, Hemşirelik Bölümü, İç Hastalıkları Hemşireliği Anabilim Dalı,, Merkez, Elazığ, gulkaya2224@gmail.com

1. KAN

1.1. Kanın yapısı

Kan, kardiyovasküler sistem içinde sürekli dolaşan vücuttaki çok hücreli organizmalarda yaşamsal olayların yerine getirilmesinde önemli görevler alan ara maddesi sıvı olan kırmızı renkli bir sıvıdır (Çürük, 2017; Köylü, 2016; Memiş, 2017). Kanın sürekli dolaşımı sayesinde hücreler arası madde alışverişi, hücrelerin beslenmesi, tamiri, ısının vücudun her tarafına dağıtılması ve hormonların dağılımı sağlanır (Köylü, 2016).

Kanın hücresel bileşeni üç ana hücre tipinden oluşur (Tablo 1); eritrositler (kırmızı kan hücreleri [RBC'ler]), lökositler (beyaz kan hücreleri [WBC'ler]) ve trombositler (PLT'ler). Kanın bu hücresel bileşenleri normalde kan hacminin %40 ila %45'ini oluşturur (Şekil 1). Çoğu kan hücresinin ömrü kısa olduğundan, vücudun hücre beslenmesinin yenileme ihtiyacı sürdürmek için bu hücrelerin devamllı yenlenmeleri gerekmektedir. Bu sürece ''hematopoezis-kan yapımı'' denir. Hematopoez için birincil bölge kemik iliğidir. Embriyonik gelişim sırasında ve diğer durumlarda karaciğer ve dalak da görev alır (Hinkle & Cheever, 2018; Memiş, 2017).

GİRİŞ

İleri dönüşüm, atık veya işe yaramaz ürünlerin yeni malzemelere veya eşit veya daha iyi kalitede veya daha yüksek çevresel değere sahip ürünlere dönüştürüldüğü bir süreçtir. İleri dönüşümün amacı, mevcut malzemeleri kullanarak potansiyel olarak faydalı malzemelerin israf edilmesini önlemektir. Çevre dostu ileri dönüşüm uygulamasının destekçileri, gelişmekte olan ülkelerin yıllardır ileri dönüşüm yaptıklarını, ambalajları ve eski giysileri yeni yöntemlerle yeniden kullandıklarını, ancak çevreden çok kendi ihtiyaçlarıyla ilgilendiklerini iddia etmektedirler. Geri dönüşüm, yalnızca daha az bir şey yapmak için atığı toplamak, ayırmak ve işlemek için enerji ve kaynak gerektirir. Bu nedenle ileri dönüşüm, geri dönüşümden daha çevreci ve çevre açısından daha iyi bir yöntemdir. Ayrıca, mevcut malzemelerin kullanılmasıyla yeni ürünler için yeni hammadde tüketimi azaltılır, bu da enerji kullanımı, hava kirliliği, su kirliliği ve CO2 emisyonlarının azalmasına neden olabilir (Teli vd. 2015; 164). İleri dönüşüm genellikle, atık malzemelerin ikinci yaşamlarında daha yüksek değere ve/veya kaliteye dönüştürüldüğü bir süreç olarak kabul edilir. Malzeme ve enerji kullanımını azaltmak için umut verici bir araç olarak giderek daha fazla tanınmaktadır. Örneğin, endüstriyel ileri dönüşümün öncüleri Braungart ve McDonough, mevcut geri dönüşüm uygulamasının aksine sürekli döngüsel malzeme yeniden kullanımı için radikal yenilikleri savunmuşlar ve bir dizi şirketin ileri dönüşümü işlerine dahil etmelerine yardımcı olmuşlardı (örn. Steelcase, Herman Miller, Ford). "İleri dönüşüm yöntemi, kullanılan atığı üretim ve tüketim zincirindeki konumunu daha önce bulunduğundan daha yükseğe yerleştirerek tasarım yoluyla tüketim zincirine geri getirmek olarak tanımlanır - buna çevresel, ticari ve estetik değer de dahildir-" (McDonough ve Braungart, 2002; Akt., Aus, 2011, Erol, 2022; 84). Szaky, ileri dönüşüm tipik olarak çok az enerji girişi gerektirdiğinden ve işlenmemiş malzemelerden yeni bir ürün ihtiyacını ortadan kaldırabileceğinden, nesne ileri dönüşümünü en sürdürülebilir döngüsel çözümlerden biri olarak görmektedir (Sung, 2015; 28).

İleri dönüşüm, dünya çapında çevreye duyarlı birçok sanatçıya ilham veren sanatsal bir hareket olarak ortaya çıkmıştır. İleri dönüşüm, üretilen atığı yaratıcı bir süreçle değerli bir nesneye dönüştürdüğü için geleneksel geri dönüşümden farklıdır. İleri dönüşümlü sanat, aşırı tüketim, çevresel bozulma ve kirlilik gibi önemli endişeleri gündeme getirmektedir. "Avrupa'da şu anda her yıl kişi başına 15 kilogramdan fazla tekstil atığı üretiliyor ve bunun en büyük kaynağı atılan giyim ve ev tekstili - toplam atığın yaklaşık % 80'ini oluşturmaktadır." Karl Hendrik Magnus, McKinsey & Company. McKinsey & Şirketi analizine göre, Avrupa'daki tekstil atıklarının %70'inin elyaftan elyafa geri dönüştürülebileceğini tahmin edilmektedir.

BÖLÜM 2

LÜKÜS HAYAT OPERETİ DOKSAN YAŞINDA

İbrahim Şevket Güleç[1]

1 Dr. Öğr. Üyesi, Necmettin Erbakan Üniversitesi, Ahmet Keleşoğlu Eğitim Fakültesi, Müzik Eğitimi Anabilim Dalı, Konya, Türkiye, isgulec@erbakan.edu.tr, Orcid ID 0000-0002-7961-5715

1.GİRİŞ

Ekrem Reşid Rey (10 Ekim 1900-13 Temmuz 1959) ve Cemal Reşid Rey'in (25 Ekim 1904-7 Ekim 1985) operet alanında sağladıkları başarının nedeni; "operet geleneğinin kent insanının geçmişinde, gazel, taksim gibi kökleşmiş değerlerinden beslenmiş olması ve bu değerler üzerinde temellenerek kitleyle kalıcı iletişim zemini kurmaya olanak vermesidir" (Uçarsu, 2004, s. 78).

Evin İlyasoğlu (1997) Cemal Reşid'in, 1930'lu yıllarda Fransız biçemi ile Anadolu renklerinin ve Divan müziğini bir arada yorumlarken diğer yandan müzikallerle ilgilenmeye başladığını söyler. Ekrem Reşid sahne dünyasına ve tiyatro diline hakim olduğundan Cemal Reşid'i de bu alana sevk eder. Bu süreçte Cemal Reşid bazen Ekrem Reşid'in önceden hazırladığı metinlere müzik yazmış, bazen de Ekrem Reşid Cemal Reşid'in eserini sahneye uyarlamıştır.

Ekrem Reşid Rey'in yazdığı ve Cemal Reşid Rey'in bestelediği Üç Saat (1932), Lüküs Hayat (1933), Deli Dolu (1934), Saz Caz (1935), Maskara (1936), Hava Civa (1941)'nın gördüğü büyük ilgi Ekrem Reşid Rey'in Batı dünyasının beğenilen iki operetini dilimize çevirmeye götürmüştür. İstanbul Şehir Tiyatrosunda oynanan bu eserler: Yarasa (Die Fledermaus-Johann Strauss) ve Dudakların'dır (Ta Bouche-Maurice Yvain).

Rey, operet yolu ile halkın çok sesli müzik alanında eğitilmesi görüşündedir. Onun için ""operet bir tebessümdür. Operalar, güç anlaşılır senfoniler halkı kolay cezbetmez. Bunu bilerek, isteyerek yaptık" der. Yazdıkları bu operetlerde yerli motiflerin kullanılması hakkında" mevcut bir motifin hemen hemen olmadığını, doğrudan bir motifi alıp koymak yerine, müziğin seyirciye bilinen melodileri hatırlatması" yöntemini kullandıklarını ifade eder. Türk Tiyatrosunun gelişimini sağlayacak ve halkı tiyatroya çekecek eserlerin müzikli veya müziksiz Türk eserleri olacağının" da altını çizerler (Tuncay, 2010, s.45-46).

Lüküs Hayat opereti 1933'de Şehir Tiyatroları Genel Sanat Yönetmeni Muhsin Ertuğrul ve İstanbul Valisi Muhittin Üstündağ'ın isteğiyle yazılır ve müzik tarihimizde en çok sahnelenen eserlerden biri olma ünvanını kazanır.

Tarih sahnesinde giyim kuşam, insanoğlunun yaşam süreci içerisinde önceleri koruma amaçlı olmasına karşın, çok geniş kültürel işlevleri de yüklenmiş bir olgudur. Geleneksel giyim ise ekolojik koşullar, toplumsal ve kişisel değer yargıları, töre ve ekonomik koşulların biçimlendirdiği önemli bir kültür öğesi aynı zamanda da o kültürün bir taşıyıcısı işlevi görmüştür (Erden, 1998, s.6).Aslında insanlık tarihi kadar eski bir geçmişe sahip olan giyim kültürü, bir yandan insan topluluklarının yaşadığı çevre, iklim, inanç, cinsiyet gibi temel ölçütler üzerinden beslenirken diğer yandan da görsel kültürü belirleyen ve sözlü olmayan iletişim unsurlarına da ev sahipliği yapmıştır (Barnard,2001,s.38).Böylece geleneksel giysilerin oluşmasında kültür kadar, iklim ve dinsel inançlar da önemli roller oynamıştır. Diğer taraftan süslenme gereksinimi de giysilerin özelliklerini belirleyen bir faktör olmuştur (Salman ve Atmaca, 2009: (15):11- 17). Genel itibariyle geleneksel giyimler, insanları dış şartlardan korunması işlevini görüp kişilik ve statülerin belirlenmesi ile de yaşanılan toplumun değerlerini yansıtan birer sembol niteliği taşırken;

1. Kırsal yörelerde geleneksel giyim kültürünün yaşatıldığı çevreler,

2. Büyük şehirlerde oluşan modern giyim kültürü çevreleri,

3. Köy ve kasabalarda modern giyim kültürüyle beraber geleneksel giyim kültürünün iç içe yaşadığı çevreler,

4. Törenlerde yaşatılmaya çalışılan geleneksel giyim kültürü çevreleri,

5. Toplulukların özelliklerini yaşatmaya çalışan diğer giyim kültür çevreleri ile de bağları söz konusu olmuştur.

Türk giyim kültürü de canlılık ve zarafeti, motif zenginliği, kalitesi ile Anadolu insanının yaşam tarzını ve dünya görüşünü büyük ölçüde yansıtan bir özelliğe sahiptir. Özellikle Anadolu'da kadın giyimi, bedenine ve ayağına giydikleri yanında bunların süsleme unsurlarındaki bezemeleri ve takıları ile de oluşan bir bütündür. Anadolu insanı bu bütün içinde, geleneklerini, toplumdaki yerine göre neyi, nerede, ne zaman, nasıl giyeceğini yaşayarak öğrenmiştir. Böylece giyim kuşam geleneği de kuşaklar arasında yaşatılmıştır.Bununla birlikte tarih, coğrafya, ekonomik ve sosyal durum gibi farklılıkların, doğal olarak kıyafet tarzlarını da etkilerken, yörelere özgü tarzların oluşmasına da zemin hazırlamıştır(Sarıoğlu, 2006: 202; Özdemir, 2012: 345-355).Giyim aksesuarları da giyim kuşam kavramının içinde tarzlarıyla farklılıklar gösteren bir olgu olarak işlevsel ve giysiyi bütünleyen objelerdir (Gargi, 2007,s.3). Kuramsal ve görsel kaynaklarla yapılan araştırmalarda, Anadolu'daki geleneksel giyim kuşamda bel aksesuarlarına, genelde ve ağırlıklı olmak üzere kadın giyiminde rastlanmaktadır. Aksesuarlar Büyük Larousse'a (1986, s.293) göre, "1.Temel olmayan ikinci dereceden nesne. 2.Temel bir öğeyi tamamlayan yada onun

GİRİŞ

Aristoteles, dram sanatının kurucu eseri olan Poetika'da taklit içgüdüsünün insanın doğasında olduğunu söyler (Aristoteles, 1987). İlkel av törenlerindeki hayvan görünüşüne bürünme isteğinden bolluk-bereket, ölme dirilme oyunlarında animizm inancından kaynaklanan totem kullanımlarına kadar taklidin en temel aracı maske olagelmiştir. Bu bakımdan mazisi performans sanatından daha eskilere dayanan maske, sahne bileşenlerinden ilki ve en etkili olanıdır. Platon'dan günümüze maske oyuncuyla seyirci arasındaki bir bariyer, hakikati gizlemek için kullanılan bir metafor olarak tanımlanmıştır. Oyuncunun sahne üzerindeki eyleminin bir maske takma işi olduğunu, oyuncunun maske takarak görünüşe geldiğini, zuhur ettiğini söyleyen Oğuz Arıcı maskenin hakikati gizleyen bir metafor olarak yargılanmasının sebebinin hakikat ile görünüş arasında açılan derin yarıktan kaynaklandığını belirtir. Arıcı'ya göre bu yarık semavi dinleri bile etkileyen Platon'un idealar dünyasının bir kopya/taklit/gölge evren olduğu yönündeki varsayımdan kaynaklanmaktadır (2014, s. 22). Arıcı'nın da belirttiği gibi bu metafizik paradigma sanatın yüzyıllar boyunca yanlış bir bilgiden hareketle yargılanmasına neden olmuştur. Bunun yanında tiyatro tarihinde maskenin onu kullanan oyuncu için özgürleştirici bir etkisi olduğu düşüncesi de taraftar toplamaktadır. Moliere oyunlarındaki ve İtalyan halk komedyasındaki kullanımları buna örnek olarak gösterilebilir (Bevis, 2018, s. 65).

Uzun yıllar boyunca gerçeği gizlemek için kullanıldığı varsayılan maskenin bugün dijital araçlar sayesinde gerçeğin ötesine geçmek için kullanıldığını söylenebilir. Özellikle dijital tiyatro örneklerinde görülen farklı alanlarda geliştirilen teknolojilerin tiyatro alanında yaratıcı biçimde kullanılması bu görüşü destekler niteliktedir. Avangart uygulamalardaki dijital arayüzler tıpkı maskenin tarihsel kullanımında olduğu gibi seyirci ve oyuncu arasındaki estetik bir iletişim aracı olarak kullanılmaktadır. Bunun yanında dijital maske olarak tanımlayabileceğimiz uygulamalar gerçeğin/gerçekliğin yeniden tanımlandığı post-truth çağında hakikat ve kurgu arasındaki paradoksal ilişkiyi tartışmaya açan deneysel projelerdir. Bu araştırmanın odaklandığı, video oyun teknolojisi için geliştirilen metahumanların birer dijital maske biçiminde kullanılması, performansın dijitalleşmesinin somut bir örneğidir. Bunun yanında araştırmaya konu olan MetaLove oyunu çağımızda gerçeklik kavramını sahne sanatları alanında tartışmaya davet eden öncü bir uygulamadır.

Dijital tiyatro üzerine yapılan benzer araştırmalara bakıldığında genellikle üretimlerin seyirci/katılımcı/alımlayıcı üzerindeki etkilerinin incelendiği görülmüş, dijital biçimde oyuncunun deneyimi ve kimliğinin dönüşümü üzerine odaklanan bir çalışmaya rastlanmamıştır. Ancak dijital teknolojilerin gelişmesiyle birlikte oyuncunun eğitimi üzerine bir dönüşü-

BÖLÜM 5

RESSAM İMREN ERŞEN VE RESİMLERİ ÜZERİNE BİR DEĞERLENDİRME

Selda ALP[1]

1 Dr. Öğretim Üyesi, Anadolu Üniversitesi Sanat Tarihi Bölümü, Eskişehir, Türkiye, E-posta: salp@anadolu.edu.tr, ORCID: 0000-0001-6959-145X

İmren Erşen 1939 yılında öğretmen bir anne ile ziraat yüksek mühendisi bir babanın kızı olarak Almanya'nın Berlin şehrinde dünyaya gelmiştir. İlk, orta ve lise eğitimini Eskişehir'de okuyan sanatçı ardından Ankara Üniversitesi Siyasal Bilgiler Fakültesi'nde tamamlamıştır. Çocukluk yıllarından itibaren babası ve halasının yaptıkları resimleri izleyerek sanat hayatına başlayan sanatçı, Ortaokul ve lise yıllarında empresyonist ressamların eserlerini kopyalayarak yaptığı çalışmalarıyla resim yeteneğini geliştirmiştir. 1967 yılında Refik Epikman'ın TA Derneği'ndeki atölye geleneğiyle karşılaşmış; Epikman'ın atölyesinde desenle başlayan resim macerası Lütfü Günay'dan aldığı boya dersleriyle 1972 yılına kadar devam etmiştir. 1968 yılında kadın ressamlar grubu olan Altılar Grubu'nun üyesi olmuştur. Sanatçı ilk desen sergisini 1968 yılında Nurtaç Özler ile birlikte açmış, ilk kişisel sergilemeleri ise 1978 yılından itibaren bugüne değin sürdürmüştür[1]. 1969-70 yıllarında Smithsonian Üniversitesi'nden Paul Ligren'in düzenlediği baskı teknikleri atölyesine üç ay boyunca katılmıştır. 1972 yılında ressam Refik Epikman'ın davetiyle Birleşmiş Ressamlar Heykeltıraşlar Derneği'ne üye olmuştur. Eşref Üren'e duyduğu saygıyı her fırsatta dile getiren sanatçı Sıtkı Erinç ile birlikte Üren anısına bir kitap hazırlamıştır.

1985 yılında İtalyan Hükümeti'nin bursuyla gittiği Floransa kentinde sokakları ve anıtsal yapıları; Lorenzo dé Medici Güzel Sanatlar Güzel Sanatlar Fakültesi'ndeki atölye hocasının izniyle de Uffizi Galery ve Floransa Tasarım Merkezi'nde (Disegno Centre) birçok desen çizmiştir. 1998-2000 yıllarında Paris'te *École Nationale Supérieure Des Beaux-arts* ve *Académie de la Grande Chaumière*'de serbest desen derslerine katılmıştır[2]. Halen çalışmalarını Ankara'daki atölyesinde sürdüren sanatçı 2023 yılına dek elliden fazla kişisel sergi açmıştır.

Eskişehir İmren Erşen Oya Müzesi'nin açılması girişimleriyle tanıdığım Erşen, her koşul ve şartta bıkmadan usanmadan tamamladığı çalışmalarıyla ve insana çalışma şevki aşılayan bir sanatçıdır. Yaşam enerjisiyle çevresini kendisine hayran bırakan Erşen'in bu özelliği eserlerinde de görülmektedir. Toplumda yaşanan olaylara duyarlı, benzerlik ve zıtlıkları aktarabildiği birçok farklı konuyu akrilik, pastel, suluboya ve yağlıboyalarında ele almıştır. Renkli kişiliğini yansıtan canlı parlak boyalarla tamamlanan eserleri, kendi deyimi ile kurallar ve mantığıyla ele aldığı çalışmaları hiç kimsenin dikkatini çekmeyen bir gecekondu mahallesinde, zeytin ağacında, vazodaki çiçekte veya balkonunda bakınan bir kadına dönüşebilir. Sanatçının ele aldığı konular bunlarla sınırlanmaz. Deniz kenarı izlenimlerini betimlediği deniz resimleri, yakamozlar, gökyüzü resimleri, tiyatro

1 1978 yılında Ankara Devlet Güzel Sanatlar Galerisi'nde açmıştır. Erşen, İ. (2016), *Desenler 1967-2016*, Sergi kataloğu, s.642.

1. Giriş Gözlemleri

Algirdas Julien Greimas, eyleyen örnekçesini 1966 yılında *Yapısal Anlambilim*[1] eserinde karakterlere ait bir rol sınıflaması olarak tanıtmıştır. Greimas'ın bu sınıflamayı, aslında Vladimir Propp'un "işlevlerin kişiler arasındaki dağılımı"[2] adıyla yaptığı tasnifi geliştirerek ortaya koyduğu bilinmektedir. Genel bir anlamlama kuramı ortaya koymanın yollarını arayan Greimas, bu girişimlerini Paris Göstergebilim Okulu adı altında sürekli olarak devam ettirir ve uzun süre anlatısal metinlerin sistematik olarak çözümlenmesi üzerine çalışır. Bu sistematik çözümleme aslında yapısalcılığın ta kendisidir. Çünkü buradaki birincil amaç, birleşerek anlamlı bir bütün oluşturan sözlü veya yazılı dilsel yapıların işlevlerini ortaya çıkarmaktır. Yapısalcı yaklaşımın en güzel sayılabilecek ürünlerini ortaya koyması itibariyle, Greimas'ın bazı anlatıbilim uzmanlarınca "yüksek yapısalcı"[3] olarak tanımlanması da bu bakımdan doğrudur.

Derin düzey incelemesi için "göstergebilimsel dörtgen"[4] ve yüzeysel düzeyde anlatı izlemini aydınlatmak için "anlatı şeması"[5] gibi çözümlenme araçlarını da kullanan Greimas, bu aygıtlarla anlatıyı mümkün olabildiğince bütüncül şekilde çözümlemeyi amaçlar. Eyleyen örnekçesi ise, bir anlatının genel izleminde ve daha küçük düzeyli izlencelerde yer alan aktörlerin soyutlaştırılarak sınıflandırılmasını kapsar. Bu sınıflandırmada dikkate alınacak husus, eyleyenlerin işlevleri ve aralarındaki "yapısal ilişkilerdir"[6]. Bunu göz önüne alarak, aynı işlevi sergileyen birden fazla aktör tek bir eyleyen çatısı altında değerlendirilebilir. Aynı şekilde, birden fazla işlev gören tek bir aktör iki veya üç farklı eyleyen rolünde karşımıza çıkabilir[7]. Böylesine kullanışlı aygıtların anlatı çözümlemelerine getirdiği kolaylıklar daha sonraları "dinsel, hukuksal, siyasal, bilimsel birçok özgül söyleme"[8] yönelik çözümlemelerde de kullanılabilmiştir. Bu durum ise, Greimas göstergebiliminin çözümleme yöntem bakımından genele yayıldığının göstergesidir.

Gerçek veya kurmaca her anlatının kurucu unsuru niteliğindeki anla-

BÖLÜM 2

SOMUT OLMAYAN KÜLTÜREL MİRAS: GENCER GELENEĞİ YEMEK KÜLTÜRÜ AKÇAOVA ÖRNEĞİ

Kübra Dilaver YILDIRIM[1]

1 Öğr. Gör. Dr., ORCID ID: 0000-0002-8775-2488. Trakya Üniversitesi, Türk Dili Bölümü, Edirne/Türkiye, kubradilaver@trakya.edu.tr.

1. Giriş

Kültürün içinde özel bir yere sahip olan yemek kavramı insanın temel fizyolojik ihtiyacı olmasının yanı sıra kültürel kimliği oluşturmada büyük bir öneme sahiptir. Toplumsal statüyü belirleme, hayat tarzını yansıtma, inanış biçimleriyle şekillenme, değer yargılarını yaşatma, sosyal ihtiyaçları karşılama amacıyla da yemek kullanılmıştır. Aidiyet kurma, birliktelik oluşturma, toplumsallaşmayı sağlama gibi gereksinimler; yemek etrafında gelişen ve oluşan bir kültürle sağlanır olmuştur. Gencer kültürü, yüzyıllar boyunca Türk kültürünün nesiller boyu aktardığı değerleri yaşatması bakımından önemlidir. Gencer geleneği; yemek, sosyal dayanışma, kutlama, tören, dil ve dile ait unsurları barındırması bakımından somut olmayan kültürel unsurların birçoğunu yaşatmaya devam etmektedir. Gencer geleneğindeki yemeğin Eski Türklerden itibaren devam eden birliktelik sağlama ve kutlama özelliği, toplumsal dinamiklere ait önemli bilgiler içermektedir. Bu dinamikler; sosyal, dinî ve ekonomik yapı ile ilişkilidir. Çalışma kapsamında Gencer geleneğinin kültür tarihindeki yeri ve bu geleneğin etrafında gelişen kültürel miras unsurlarına yer verilecektir. Somut olmayan kültürel miras örneği olarak, Akçaova'da her Ramazan Bayramının ikinci günü gerçekleştirilen Akçaova geleneksel mutfak ve yemek kültüründe *gencer* geleneği incelenmiştir. Bu inceleme kapsamında *gencer* sözcüğünün leksik, semantik, etimolojik yapısı üzerinde durulmuştur. Bu araştırma kapsamında Türkçe Sözlük, Derleme Sözlüğü, Tarama Sözlüğü, etimolojik sözlükler ve kaynaklar taranmıştır. Gencer sözcüğünün anlam alanı araştırılmış ve *gencer* etrafında gelişen kültür dairesi incelenmiştir. Ayrıca bu *gencer* kültürü ile birlikte var olan yemek ve mutfak kültürü unsurları, kap kacaklar hakkında da bilgi verilmiştir. Aydın'ın Çine ilçesi Akçaova beldesindeki *gencer* kültürünün geçmişten günümüze yeri ve önemi saha araştırması yapılarak ortaya konmaya çalışılmıştır. Ortaya çıkan bulgular sonuç kısmında verilmiştir. Ahîlik geleneği, Akçaova *gencer* kültüründe yaşamaya devam etmektedir. Bu gelenek ile yöre halkının inanç kökenleri, yaşayış tarzı, dünya görüşü, ekonomik yapısı, töresi, nizamı ortaya çıkmaktadır. Mutfak kültürü muhafazakâr bir yapıya sahip olduğundan yüzyıllarca eskiye dayanan gelenekleri bünyesinde korur ve yaşatır. Bu bakımdan *gencer* kültürünün bir tören olarak kutlanması ve bu törene özgü tandır yemeğinin tüketilmesi ve paylaşılmasındaki amacın, toplum içindeki sosyal dengenin sağlanması olduğu görülür. Bayramda gelen konukların aidiyet kurmaları, uzak düşmüş akrabaların birliktelik içinde bulunmaları *gencer* kültürünün temel dinamiğidir. Eski dönemlerde kapalı bir toplum içinde yaşayan gençlerin birbirini görüp tanışmalarını mümkün kılan bir evlilik temellendiricisi olarak sosyalleşmeyi sağlamıştır. Bir festival tadında yaşatılan *gencer*, ticarî hayatın canlılığına katkıda bulunan bir gelenekti. Günlük hayatta ihtiyaç duyulacak nesnelere ulaşıla-

TEFRİKA ROMAN GELENEĞİNİN WATTPAD'E DÖNÜŞÜMÜ ÜZERİNDEN DİJİTAL DÜNYADA EDEBİYATIN YENİ GÖRÜNÜMLERİ

Erol GÖKŞEN[1]

1 Öğr. Gör. Dr. Erol Gökşen, Hacettepe Üniversitesi Türkçe ve Yabancı Dil Öğretimi Uygulama ve Araştırma Merkezi (HÜ TÖMER) Beytepe-Çankaya- Ankara, erolgoksen@gmail.com, ORCID: 0000-0001-7051-5825.

Giriş

Toplumların üretim ilişkilerinin tarihsel süreç içerisindeki değişimi ve dönüşümü iletişim tarihinde kavramların farklı şekillerde isimlendirilmelerine vesile olmuştur. Kimi düşünürler bu değişim ve dönüşüm sürecini toplumların yüzyıllar içerisinde kat ettikleri yol üzerinden tanımlarken kimi düşünürlerse temele bilgi ve bilginin farklılaşmasını oturtarak yorum yaparlar. Bu düşünürlerden biri olan Massimo Baldini ise söz konusu süreci yorumlarken değişim ve dönüşümü yansıtan unsurlar üzerinden sınıflama yapmıştır. Massimo Baldini *İletişim Tarihi* adlı kitabında iletişimde yaşanan farklılaşma sürecini "sözlü (oral) kültür", "yazılı kültür", "tipografik kültür", "elektrik ve elektronik medya kültürü" olmak üzere dört bölüme ayırır (2000: 6). Bu bağlamda sözlü kültür ürünleri, yazılı kültürden önceki dönemin ürünlerine denk gelirken yazılı kültür ürünleri M. Ö. 4. yüzyılda yazının bulunmasını izleyen döneme aittir. Tipografik kültür evresi, 15. yüzyılın ortalarında matbaanın bulunmasıyla; elektronik medya kültürü evresi ise Sanayi Devrimi'nin ardından telgraf, radyo ve televizyonun icadıyla başlar. Dahası son yıllarda teknolojide yaşanan gelişmeler göz önüne alındığında elektronik medya kültürünün içinde ayrı bir öneme sahip "dijital kültürü" de bu dört döneme eklemek gerekir. Böylece iletişim tarihinin başlangıcından itibaren bu beş kültürel dönemin üzerine kurulu bir değişim ve dönüşüm sürecine dayandığından bahsedilebilir.

Sözlü Kültürden Dijital Kültüre Hikâye Anlatıcılığı

Walter Ong'a göre sözlü kültür "yazının olmadığı" dönemde iletişimin söz aracılığıyla aktarımı üzerine kuruludur (2014: 20). Sözlü kültürün kendine has yapısı, onun bellekte yer edinmeye dayalı bir forma sokar. Sözlü kültürde bütün bilgiler ses ile taşınırken yazılı kültürde bilgi, kil ve tablet üzerinden kodlarla aktarılır. Tipografik kültürde çeşitli araçlarla yazının kolay bir biçimde çoğaltılması ve taşınabilirliği önemlidir. Elektronik medya kültürü evresine gelindiğinde iletişim tarihi kökten değişecektir. Telgraf, telefon, radyo, sinema ve televizyonun icadıyla birbirinden farklı biçimlerde duyu organlarına hitap eden iletişim araçları bu kültür evresinin bir ürünüdür. İnternetin 1970'li yıllarda ortaya çıkması ve sonrasında bütün dünyaya yayılmasıyla birlikte de yeni bir evreye girilmiştir. Bu evre ise dijital kültür olarak isimlendirilmiş olup bilgiye erişimin kolaylaştığı bir dönemi kapsamaktadır.

İletişim tarihinin kültür üzerinden beş farklı döneme ayrılması (sözlü kültür, yazılı kültür, tipografik kültür, elektronik medya kültürü, dijital kültür) "hikâye anlatma" biçimlerinin şekillenmesi açısından da önem arz eder. Sözlü kültürde hikâye anlatma biçimi çeşitli anlatıcılar yoluyla gerçekleşmektedir. Dil ve sözün yardımıyla kayıt aracı vazifesi gören belleğin imkânları sözlü kültür evresinde sonuna kadar kullanılmıştır. Bellek, duyduğunu depolarken kulak

BÖLÜM 4

TRAGEDYADAN TRAGİ-KOMEDYAYA: HAROLD PİNTER'IN ERKEN DÖNEM OYUNLARI

K. Çiğdem YILMAZ[1]

1 K. Çiğdem Yılmaz, Dr. Öğr. Üyesi. Sivas Cumhuriyet Üniversitesi. ORCID: 0000-0002-2490-5993.

Tragi-komedya yaşamın acımasızlıklarının insanın doğası, yaşamın kendisi, dünyanın kanunu olduğunu anlatır. (Bentley, 1975, s. 342)

Trajik ve komik insanın evrenle uyuşmazlığının ifadeleri olarak yaşamın iç içe geçmiş iki yönüdür. Trajik tasavvurda bu uyuşmazlık sınırlarını aşmaya çalışan insanın ilahi güçle karşılaşmasında ortaya çıkar. Bu karşılaşmanın trajik kahraman açısından sonucu mutlak yenilgi ve insanın sınırlılığı ile savunmasızlığına dair kazandığı farkındalıktır. Komik tasavvurda dünya uyumsuzluklar, belirsizlikler ve çelişkilerle doludur. Komik oyun kişisi karşısında ilahi bir güç değil toplum, aile, kurallar gibi dünyevi bir yapı vardır. Bu uyuşmazlık kahraman açısından daha düzenli, güvenli ve mutlu bir yaşam ve toplumsal yapıyla uzlaşma ile sonuçlanır. Tragedyada ve komedyada betimlenen ilahi ve dünyevi düzen kahramanın müdahalesi nedeniyle bozulsa da sonunda düzen yeniden sağlanır. Trajikomik tasavvur da insanın evrenle uyuşmazlık içindeki varlığını betimler. Bu bağlamda modern tragi-komedya, insanları anlamsız bir evrendeki güvencesiz ve çaresiz konumları konusunda bilgilendirir ve yaşamın tutarsızlıklarını gösterir. Tragi-komedya karmaşıklığı ve çelişkileriyle insan deneyimini gözler önüne serer. Tragi-komedya insanı yok eden felaketleri ve cefayı tıpkı tragedya gibi kaçınılmazlaştırır. Ancak trajik tasavvurda kahramanı yüceleştirmesi nedeniyle olumlanan cefa tragi-komedyada olumlanmaz. Trajikomik anlayışın geride bıraktığı duygu tam anlamıyla boşunalık ve amaçsızlıktır. Güvenceden yoksun, çaresiz ve savunmasız insanı betimleyen absürt oyunlar, trajikomik yazının çağdaş biçimidir. Oyunlar insanın varoluşunu karmaşıklığı, yetersizliği ve çaresizliği içinde betimleyerek çağdaş insanın trajikomik deneyimini yansıtır. Harold Pinter'ın absürt oyunları, insan yaşamının güvencesizliğini ve belirsizliğini betimler. Pinter'ın oyunlarının merkezinde güvenlik kaygısı vardır. Bu kaygıya neden olan tehdit ya da tehlike dış dünyada fiziksel olarak bulunur, ansızın ortaya çıkar ve oyun kişilerinin yaşamını tam anlamıyla istila eder. Pinter'ın ilk oyunlarındaki baş oyun kişileri sezgisel ve tanımsız tehdit nedeniyle trajik-varoluşsal kaygı ve korku yaşarlar. Oyun kişilerinin kaygılarıyla başa çıkma çabaları oyunların görünürdeki komik yönünü oluşturur ancak asıl komik unsur grotesk örüntüdür. Pinter insanlık durumu bağlamında insanın evrendeki varoluşsal durumunu metafizik sorgulamalarla değil günlük hayat içinde maskelenmiş, gizlenmiş haldeki kaynağı bilinmeyen tehlikenin karşısındaki insanı betimleyerek ele alır. Modern insanın trajikomik çıkmazı bu bilinmeyen tehlike nedeniyle yaşamak zorunda kaldığı sürekli kaygı ve korku halidir. Pinter'ın oyunlarında bu kaygı hali komikten korkutucu olana doğru ilerler ve absürt kavramı kendini korku etrafında dönen kahkahada gösterir. Absürt imgelem trajikomik tasavvurun ifadesi olarak komik olanı değil hüzünlü ve acı verici

1 Dr. Öğr. Üyesi, Sağlık Hizmetleri Meslek Yüksekokulu, Giresun Üniversitesi, Giresun, 0000-0002-2632-8325, beyza.yucel@giresun.edu.tr

GİRİŞ

Pirazolin bileşikleri, yapısında 3 karbon atomu ve komşu 2 azot atomu içeren beş üyeli tek halka yapılı heterosiklik bir sistemdir (Dipankar vd., 2012). Endosiklik çift bağ bulunması sebebiyle dihidropirazol olarak da isimlendirilen bu bileşikler doğal bileşikler olup, özellikle bitki ve hayvan hücrelerinin yapısında değişik formlarda bulunan alkaloitler, vitaminler ve pigmentlerin önemli bileşenleridir (Sever, 2019). Aslında, pirazolinler, pirazollerin indirgenmiş formlarıdır, pirazolidin bileşikleride pirazolün tamamen indirgenmiş bir şeklidir (Smith ve Howard, 1943)

Şekil 1.Pirazol molekülün pirazolin ve pirazolidine indirgenmesi

Bu bileşiklerin isimlendirilmesinde, tautomer isimleri direk kullanılabileceği gibi Δ üstü tautomer numarasıyla yapılan Δ^2-pirazolin gibi kullanımıdır (Qin vd., 2015). Bunun yanı sıra başka bir isimlendirme için kullanılan formül, tautomer yapılar sırasında 4,5-dihidro-(3H)-pirazol, 4,5-dihidro-(1H)-pirazol ve 2,3-dihidro-(1H)-pirazol şeklinde olup bu isimlendirmeler de literatürdeki çalışmalarda görülmektedir (Shaaban, Mayhoub ve Farag, 2012)

Şekil 2 . Pirazolin molekülünün tautomerik yapıları

Pirazolin Bileşiklerinin Fiziksel ve Kimyasal Özellikleri

Pirazolin bileşiklerinde ana halkaya bağlı bir grup bulunmaması veya az üyeli küçük hacimli grupların bağlı olduğu durumlarda pirazolin bileşikleri 25 °C'de genel olarak sıvı formda bulunmaktadır (Salgın-Gökşen, 2015). Kaynama noktaları sudan daha yüksek olan bu bileşikler genellikle 120-150 °C aralığında kaynama noktasına sahiptir. Substituent olarak bağlanan grupların sayısal ve hacimsel ağırlığı arttıkça pirazolin bileşikleri katı forma geçmektedir. Bu bileşikler genel olarak açık sarı ile soluk sarı
